## EXPLANATORY STATEMENT

TABLE I shows, for London and the County Boroughs and those urban districts with resident populations exceeding 50,000 at the last Census, the number of births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday. The births relate to those registered in the area, but include births occurring in municipal maternity hospitals situate outside the area to which they belong.

The deaths are exclusive of non-residents but corrected as far as possible by the inclusion of deaths of residents in other areas. The deaths in Edinburgh and Glasgow are fully corrected for non-residents; those in Dublin and Belfast are corrected by the exclusion of deaths of non-residents occurring in public institutions.

TABLE 2 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for the previous year.

TABLE 3 is a summary of cases of certain specified infectious diseases in England and Wales notifiable under the general law or under orders made by the Local Government Board or Minister of Health and is based upon weekly returns received from the Medical Officers of Health of all Local (and Port) Sanitary Authorities.

The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

TABLE 3A is similar to Table 3, but relates to the returns received too late for inclusion in Table 3 of the previous week. It includes revised figures for England and Wales as a whole for that week.

TABLE 4 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for the previous year.

TABLE 5 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 6 is a Report of the meteorological observations taken at Greenwich on each day of the week.

Summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, are published in the Registrar-General's Quarterly Return and the Statistical Review (Part I).

## NOTES FOR THE WEEK ENDED 8th JANUARY, 1938

### BIRTHS AND DEATHS.

In the 125 **County Boroughs and Great Towns** of England and Wales the live births registered in the first week of the year numbered 7,137 corresponding to an annual rate of 17.6 per 1,000 living: stillbirths numbered 275 corresponding to a rate of 37 per 1,000 total births registered (including stillborn): the deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 6,279 (51 less than in the preceding week).

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 86, against 74, 72 and 87 in the preceding three weeks.

In **London** (Administrative County including the City of London) there were 1,297 live births registered corresponding to an annual rate of 16.3 per 1,000 living: stillbirths number 52 corresponding to a rate of 39 per 1,000 total births (including stillborn): the deaths (excluding stillbirths) numbered 1,274 (8 less than in the preceding week): infant mortality, based on the average weekly number of live births during the last 52 weeks, was 77 against 76, 64 and 83 in the preceding three weeks.

Table 3.—Notifications of Infectious Diseases.

Number of cases notified in the week ended 8th January, 1938, in Administrative Areas and Port Sanitary Districts with Summary for England and Wales.

Note.—Where no return has been received a \* is inserted in the columns. Totals shown against the names of Counties include any associated County Boroughs. The letters in the last column denote the following diseases:—A, Cholera; B, Plague; C, Puerperal fever, (London A.C. only); D, Cerebro-spinal fever; E, Acute poliomyelitis; F, Acute poliio-encephalitis; G, Acute encephalitis lethargica; H, Typhus fever; I, Relapsing fever; J, Continued fever (London A. C. only); L, Dysentery; M, Ophthalmia neonatorum; N, Puerperal pyrexia (including fever in all areas except London A. C.).

	Small-pox.	Scarlet fever.	Diphtheria.	Enteric (typhoid & paratyphoid) fever.	Acute pneumonia (prim'y or influenz'l).	Other diseases (see note at head of table).		Small-pox.	Scarlet fever.	Diphtheria.	Enteric (typhoid & paratyphoid) fever.	Acute pneumonia (prim'y or influenz'l).	Other diseases (see note at head of table).

\* The figures in this Table relate to the areas as constituted at the date of the weekly returns no corrections having been made for changes in boundary. The live births are derived from the weekly returns furnished by the Registrars and differ from those published for the towns in the Quarterly Return which are corrected for births occurring away from the usual residence of the parents.

† The figures for the Great Towns in the weekly columns relate to 124 Towns up to and including the week ended 13th Nov., and thereafter to 125 Towns. The comparable totals for the years 1937 and 1938 in the last two columns, are in respect of 122 Towns.

**Table 5.—Meteorology in certain Towns during the Week ended Saturday 8th January, 1938.**

JANUARY, 1938.					
Sunday ... 2		0.0	7.9	Overcast or nearly so. Rain 1h. till 11h. and occasionally from 14h. Misty.	
Monday ... 3		0.0	8.0	Overcast or nearly so till 9h., then overcast. Rain about 14h. Occasional slight snow till 17h. Misty.	
Tuesday ... 4		0.0	8.0	Overcast, nearly so after 15h. Partially cloudy 17h. till 18h. and 22h. till 23h. Occasional slight rain 10h. till 16h. Misty.	
Wednesday ... 5		0.0	8.0	Nearly overcast till 9h., then overcast. Occasional slight drizzle 10h. till 14h. Misty. from 6h.	
Thursday ... 6		0.0	8.0	Overcast or nearly so. Rain 22h. till oh. Misty during day.	
Friday ... 7		2.7	8.1	Nearly overcast till 6h., then little cloud. Very cloudy 12h. till 15h., then little cloud.	
Saturday ... 8		0.3	8.1	Little cloud till 5h., then nearly overcast. Drizzle 16h. till 19h. Mist during day.	
No. of Column	25	Sum 3.0	Sum 56.1		27

The results apply to the Civil Day, or from midnight to midnight, Greenwich Mean time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the day bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "higher" and - "lower" than the average.

The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined.

The numbers in column 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer increased from 30.20 ins. at the beginning of the week to 30.34 ins. by 11h. on Jan. 3rd; decreased to 30.04 ins. by 10h. on Jan. 4th; increased to 30.18 ins. by 10h. on Jan. 5th; decreased and was 28.94 ins. by midnight on Jan. 8th.

Discontinued.

## CENSUS OF ENGLAND AND WALES, 1931

Census volumes in respect of the counties of England and Wales have now been published.

Parts I of the series, which are complete, relate to the areas as constituted at the date of the Census. Parts II will deal with the changes in boundary effected by County schemes under the Local Government Act of 1929, and will provide a limited range of statistics in respect of the newly constituted areas.

Sectional volumes presenting the results of the census of industries, occupations, etc. are also available, and particulars will be furnished on application.

# The Registrar-General's Statistical Review of England and Wales for the year 1936.

## Tables. Part I—Medical.

Comprises 29 tables covering the entire statistical field relating to population, births, deaths and diseases. The volume makes possible detailed study of the causes of death in the various local government areas of the country, by sex and by 9 age groups. The statistics are summarised and the summary of causes of death records figures for the preceding ten years also. Three tables of meteorological data are also provided.

## EXPLANATORY STATEMENT

TABLE I shows, for London and the County Boroughs and those urban districts with resident populations exceeding 50,000 at the last Census, the number of births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday. The births relate to those registered in the area, but include births occurring in municipal maternity hospitals situate outside the area to which they belong.

The deaths are exclusive of non-residents but corrected as far as possible by the inclusion of deaths of residents in other areas. The deaths in Edinburgh and Glasgow are fully corrected for non-residents; those in Dublin and Belfast are corrected by the exclusion of deaths of non-residents occurring in public institutions.

TABLE 2 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for the previous year.

TABLE 3 is a summary of cases of certain specified infectious diseases in England and Wales notifiable under the general law or under orders made by the Local Government Board or Minister of Health and is based upon weekly returns received from the Medical Officers of Health of all Local (and Port) Sanitary Authorities.

The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are *omitted* from this Summary.

TABLE 3A is similar to Table 3, but relates to the returns received too late for inclusion in Table 3 of the previous week. It includes revised figures for England and Wales as a whole for that week.

TABLE 4 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for the previous year.

TABLE 5 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 6 is a Report of the meteorological observations taken at Greenwich on each day of the week.

Summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, are published in the Registrar-General's Quarterly Return and the Statistical Review (Part I).

## NOTES FOR THE WEEK ENDED 15th JANUARY, 1938

### BIRTHS AND DEATHS.

In the 125 **County Boroughs and Great Towns** of England and Wales the live births registered in the second week of the year numbered 6,668 corresponding to an annual rate of 16.4 per 1,000 living: stillbirths numbered 259 corresponding to a rate of 37 per 1,000 total births registered (including stillborn): the deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 6,147 (132 less than in the preceding week).

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 89, against 72, 87 and 86 in the preceding three weeks.

In **London** (Administrative County including the City of London) there were 1,326 live births registered corresponding to an annual rate of 16.7 per 1,000 living: stillbirths number 30 corresponding to a rate of 22 per 1,000 total births (including stillborn): the deaths (excluding stillbirths) numbered 1,213 (61 less than in the preceding week): infant mortality, based on the average weekly number of live births during the last 52 weeks, was 88 against 64, 83 and 77 in the preceding three weeks.

**Table 3.—Notifications of Infectious Diseases.**

**Number of cases notified in the week ended 15th January, 1938, in Administrative Areas and Port Sanitary Districts with Summary for England and Wales.**

*Note.*—Where no return has been received a \* is inserted in the columns. Totals shown against the names of Counties include any associated County Boroughs. The letters in the last column denote the following diseases :—A, Cholera ; B, Plague ; C, Puerperal fever (London A. C. only) ; D, Cerebro-spinal fever ; E, Acute poliomyelitis ; F, Acute polio-encephalitis ; G, Acute encephalitis lethargica ; H, Typhus fever ; I, Relapsing fever ; J, Continued fever (London A. C. only) ; L, Dysentery ; M, Ophthalmia neonatorum ; N, Puerperal pyrexia†.

† By virtue of the Public Health Act, 1936, in all areas outside London A. C., conditions notifiable as puerperal fever prior to the 1st October, 1937, are, from that date, notifiable as and included with notifications of puerperal pyrexia.

**Summary.**

	Small-pox.	Scarlet fever.	Diphtheria.	Enteric (typhoid and paratyphoid) fever.	Acute pneumonia (primary or influenzal).	Cholera.	Plague.	Puerperal fever.† (London A. C. only).	Cerebro-spinal fever.	Acute poliomyelitis.	Acute polioencephalitis	Acute encephalitis lethargica.	Typhus fever.	Relapsing fever.	Continued fever. (London A. C. only).	Dysentery.	Ophthalmia neonatorum.	Puerperal pyrexia.†

\* The figures in this Table relate to the areas as constituted at the date of the weekly returns no corrections having been made for changes in boundary. The live births are derived from the weekly returns furnished by the Registrars and differ from those published for the towns in the Quarterly Return which are corrected for births occurring away from the usual residence of the parents.

† The figures for the Great Towns in the weekly columns relate to 124 Towns up to and including the week ended 13th Nov., and thereafter to 125 Towns. The comparable totals for the years 1937 and 1938 in the last two columns, are in respect of 122 Towns.

**Table 5.—Meteorology in certain Towns during the Week ended Saturday 15th January, 1938.**

DATE.		ATMOSPHERIC ELECTRICITY. (For explanation of symbols, see Note.)	Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
JANUARY, 1938.					
Sunday	9		1-6	8-1	Overcast till 8h., very cloudy till 14h., then variably cloudy. Rain 34h. till 44h. Solar halo about noon. Lunar halo 194h. Fresh wind 7h. till 15h.
Monday	10		0-6	8-1	Overcast generally. Rain 11h. till 154h. Sleet 124h. till 124h. Mist during day.
Tuesday	11		0-0	8-2	Cloudless by 1h. Thin cloud 8h. till 10h., overcast by 11h. Rain 124h. till 134h. and damping from 20h.
Wednesday	12		0-0	8-2	Overcast. Rain or drizzle 1h. till 6h. Fresh wind 6h. till 16h. Lunar halo about 214h.
Thursday	13	Discontinued.	0-0	8-2	Overcast or nearly so till 234h., few clouds by oh. Rain oh. till 34h. and from 14h. till 184h. Fresh wind oh. till 9h.
Friday	14		0-0	8-3	Few clouds till 54h., nearly overcast by 6h. Overcast from 94h. Rain or slight rain 154h. till 21h. Fresh wind 16h. till 22h., then strong breeze.
Saturday	15		0-3	8-3	Overcast till 5h., very cloudy till 184h., then little cloud. Rain 10h. till 1h. 20h. and slight rain 114h. till 12h. Strong breeze till 21h., moderate gale 9h. till 15h.
No. of Column		25	Sum 2-5	Sum 57-4	
			26	27	

The results apply to the Civil Day, or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean readings of the dry bulb thermometer, is combined the corrected mean daily value of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7).

Temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "higher" and - "lower" than the average.

The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined.

The numbers in column 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine on each day.

The reading of the barometer decreased from 28-94 ins. at the beginning of the week to 28-62 ins. by 7h. on 9th; increased to 28-79 ins. by 15h. on 9th; decreased to 28-59 ins. by 5h. on 10th; increased to 29-48 ins. by 23h. on 11th; decreased to 29-34 ins. by 7h. on 12th; increased to 29-68 ins. by 20h. on 12th; decreased to 29-49 ins. by 5h. on 13th; increased to 29-85 ins. by 8h. on 14th; decreased to 29-01 ins. by 10h. on 15th; increased and was 29-03 ins. by midnight on the same day.

Parts I of the series, which are complete, relate to the areas as constituted at the date of the Census. Parts II will deal with the changes in boundary effected by County schemes under the Local Government Act of 1929, and will provide a limited range of statistics in respect of the newly constituted areas.

Sectional volumes presenting the results of the census of industries, occupations, etc. are also available, and particulars will be furnished on application.

## EXPLANATORY STATEMENT

TABLE I shows, for London and the County Boroughs and those urban districts with resident populations exceeding 50,000 at the last Census, the number of births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday. The births relate to those registered in the area, but include births occurring in municipal maternity hospitals situate outside the area to which they belong.

The deaths are exclusive of non-residents but corrected as far as possible by the inclusion of deaths of residents in other areas. The deaths in Edinburgh and Glasgow are fully corrected for non-residents; those in Dublin and Belfast are corrected by the exclusion of deaths of non-residents occurring in public institutions.

TABLE 2 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for the previous year.

TABLE 3 is a summary of cases of certain specified infectious diseases in England and Wales notifiable under the general law or under orders made by the Local Government Board or Minister of Health and is based upon weekly returns received from the Medical Officers of Health of all Local (and Port) Sanitary Authorities.

The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are *omitted* from this Summary.

TABLE 3A is similar to Table 3, but relates to the returns received too late for inclusion in Table 3 of the previous week. It includes revised figures for England and Wales as a whole for that week.

TABLE 4 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for the previous year.

TABLE 5 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 6 is a Report of the meteorological observations taken at Greenwich on each day of the week.

Summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, are published in the Registrar-General's Quarterly Return and the Statistical Review (Part I).

## NOTES FOR THE WEEK ENDED 22nd JANUARY, 1938

### BIRTHS AND DEATHS.

In the 125 **County Boroughs and Great Towns** of England and Wales the live births registered in the third week of the year numbered 6,830 corresponding to an annual rate of 16.8 per 1,000 living: stillbirths numbered 284 corresponding to a rate of 40 per 1,000 total births registered (including stillborn): the deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 5,656 (489 less than in the preceding week).

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 78, against 87, 86 and 88 in the preceding three weeks.

In **London** (Administrative County including the City of London) there were 1,343 live births registered corresponding to an annual rate of 16.9 per 1,000 living: stillbirths number 41 corresponding to a rate of 30 per 1,000 total births (including stillborn): the deaths (excluding stillbirths) numbered 1,105 (108 less than in the preceding week): infant mortality, based on the average weekly number of live births during the last 52 weeks, was 74 against 83, 77 and 88 in the preceding three weeks.

Table 3.—Notifications of Infectious Diseases.

Number of cases notified in the week ended 22nd January, 1938, in Administrative Areas and Port Sanitary Districts with Summary for England and Wales.

*Note.*—Where no return has been received a \* is inserted in the columns. Totals shown against the names of Counties include any associated County Boroughs. The letters in the last column denote the following diseases :—A, Cholera ; B, Plague ; C, Puerperal fever (London A. C. only) ; D, Cerebro-spinal fever ; E, Acute poliomyelitis ; F, Acute poliomyelitis ; G, Acute encephalitis lethargica ; H, Typhus fever ; I, Relapsing fever ; J Continued fever (London A. C. only) ; L, Dysentery ; M, Ophthalmia neonatorum ; N, Puerperal pyrexia†.

† By virtue of the Public Health Act, 1936, in all areas outside London A. C., conditions notifiable as puerperal fever prior to the 1st October, 1937, are, from that date, notifiable as and included with notifications of puerperal pyrexia.

Summary.

	Small-pox.	Scarlet fever.	Diphtheria.	Enteric (typhoid and paratyphoid) fever.	Acute pneumonia (primary or influenzal).	Cholera.	Plague.	Puerperal fever.† (London A. C. only).	Cerebro-spinal fever.	Acute poliomyelitis.	Acute poliomyelitis	Acute encephalitis lethargica.	Typhus fever.	Relapsing fever.	Continued fever. (London A. C. only).	Dysentery.	Ophthalmia neonatorum.	Puerperal pyrexia.†

\* The figures in this Table relate to the areas as constituted at the date of the weekly returns no corrections having been made for changes in boundary. The live births are derived from the weekly returns furnished by the Registrars and differ from those published for the towns in the Quarterly Return which are corrected for births occurring away from the usual residence of the parents.

† The figures for the Great Towns in the weekly columns relate to 124 Towns up to and including the week ended 13th Nov., and thereafter to 125 Towns. The comparable totals for the years 1937 and 1938 in the last two columns, are in respect of 122 Towns.

**Table 5.—Meteorology in certain Towns during the Week ended Saturday, 22nd January, 1938.**

DATE.		ATMOSPHERIC ELECTRICITY. (for explanation of symbols, see Note.)	Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
JANUARY, 1938.					
Sunday	16		0.0	8.4	Little cloud till 11h., overcast by 3h. Slight rain 5h. till 6h. Rain 9h. till 12h., then drizzle till 21h. Fresh wind from 8h.
Monday	17		4.2	8.4	Overcast till 8h., partially cloudy generally till 18h., then nearly cloudless. Fresh wind till 5h.
Tuesday	18		0.0	8.4	Nearly cloudless, cloudy by 11h. Overcast from 9h. Hoar frost in morning. Damping 19h. till 21h. Rain about 22h. and at 0h.
Wednesday	19	Discontinued.	5.2	8.5	Overcast till 11h., then little cloud. Overcast from 18h. Mist in morning.
Thursday	20		0.1	8.5	Overcast or nearly so.
Friday	21		0.0	8.6	Overcast till 20h., then thin cloud. Few clouds from 22h. Drizzle 13h. till 17h. Mist in evening.
Saturday	22		1.0	8.6	Little cloud till 3h., cloudy till 10h., then nearly overcast. Misty.
No. of Column		25	Sum 10.5	Sum 59.4	
			26	27	

The results apply to the Civil Day, or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

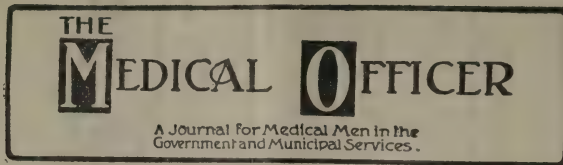

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "higher" and - "lower" than the average.

The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined.

The numbers in column 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer increased from 29.63 ins. at the beginning of the week to 29.66 ins. by 2h. on 16th; decreased to 29.27 ins. by 21h. on the 16th; increased to 29.96 ins. by 2h. on the 18th; decreased to 29.43 ins. by 11h. on the 19th; increased and was 30.29 ins. by midnight on the 22nd.

36/38 Whitefriars Street, London, E.C.4.

The recognised weekly journal of Medical Officers of Health, School Medical Officers, Tuberculosis Officers, V.D. Officers, Maternity and Child Welfare Medical Officers, and Medical Officers of Municipal Hospitals, Sanatoria, etc. etc.

# The Registrar-General's Statistical Review of England and Wales for the year 1936.

## Tables. Part I—Medical.

Comprises 29 tables covering the entire statistical field relating to population, births, deaths and diseases. The volume makes possible detailed study of the causes of death in the various local government areas of the country, by sex and by 9 age groups. The statistics are summarised and the summary of causes of death records figures for the preceding ten years also. Three tables of meteorological data are also provided.

## EXPLANATORY STATEMENT

TABLE I shows, for London and the County Boroughs and those urban districts with resident populations exceeding 50,000 at the last Census, the number of births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday. The births relate to those registered in the area, but include births occurring in municipal maternity hospitals situate outside the area to which they belong.

The deaths are exclusive of non-residents but corrected as far as possible by the inclusion of deaths of residents in other areas. The deaths in Edinburgh and Glasgow are fully corrected for non-residents; those in Dublin and Belfast are corrected by the exclusion of deaths of non-residents occurring in public institutions.

TABLE 2 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for the previous year.

TABLE 3 is a summary of cases of certain specified infectious diseases in England and Wales notifiable under the general law or under orders made by the Local Government Board or Minister of Health and is based upon weekly returns received from the Medical Officers of Health of all Local (and Port) Sanitary Authorities.

The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are *omitted* from this Summary.

TABLE 3A is similar to Table 3, but relates to the returns received too late for inclusion in Table 3 of the previous week. It includes revised figures for England and Wales as a whole for that week.

TABLE 4 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for the previous year.

TABLE 5 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 6 is a Report of the meteorological observations taken at Greenwich on each day of the week.

Summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, are published in the Registrar-General's Quarterly Return and the Statistical Review (Part I).

## NOTES FOR THE WEEK ENDED 29th JANUARY, 1938

### BIRTHS AND DEATHS.

In the 125 County Boroughs and Great Towns of England and Wales the live births registered in the fourth week of the year numbered 6,365 corresponding to an annual rate of 15.7 per 1,000 living: stillbirths numbered 286 corresponding to a rate of 43 per 1,000 total births registered (including stillborn): the deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 5,263 (393 less than in the preceding week).

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 69, against 86, 88 and 78 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,246 live births registered corresponding to an annual rate of 15.7 per 1,000 living: stillbirths number 49 corresponding to a rate of 38 per 1,000 total births (including stillborn): the deaths (excluding stillbirths) numbered 1,074 (31 less than in the preceding week): infant mortality, based on the average weekly number of live births during the last 52 weeks, was 67 against 77, 88 and 74 in the preceding three weeks.

Table 3.—Notifications of Infectious Diseases.

Number of cases notified in the week ended 29th January, 1938, in Administrative Areas and Port Sanitary Districts with Summary for England and Wales.

*Note.*—Where no return has been received a \* is inserted in the columns. Totals shown against the names of Counties include any associated County Boroughs. The letters in the last column denote the following diseases:—A, Cholera; B, Plague; C, Puerperal fever (London A. C. only); D, Cerebro-spinal fever; E, Acute poliomyelitis; F, Acute polio-encephalitis; G, Acute encephalitis lethargica; H, Typhus fever; I, Relapsing fever; J Continued fever (London A. C. only); L, Dysentery; M, Ophthalmia neonatorum; N, Puerperal pyrexia†.

† By virtue of the Public Health Act, 1936, in all areas outside London A. C., conditions notifiable as puerperal fever prior to the 1st October, 1937, are, from that date, notifiable as and included with notifications of puerperal pyrexia.

Summary.

	Small-pox.	Scarlet fever.	Diphtheria.	Enteric (typhoid and paratyphoid) fever.	Acute pneumonia (primary or influenzal).	Cholera.	Plague.	Puerperal fever.† (London A. C. only).	Cerebro-spinal fever.	Acute poliomyelitis.	Acute polioencephalitis	Acute encephalitis lethargica.	Typhus fever.	Relapsing fever.	Continued fever. (London A. C. only).	Dysentery.	Ophthalmia neonatorum.	Puerperal pyrexia.†

\* The figures in this Table relate to the areas as constituted at the date of the weekly returns no corrections having been made for changes in boundary. The live births are derived from the weekly returns furnished by the Registrars and differ from those published for the towns in the Quarterly Return which are corrected for births occurring away from the usual residence of the parents.

† The figures for the Great Towns in the weekly columns relate to 124 Towns up to and including the week ended 13th Nov., and thereafter to 125 Towns. The comparable totals for the years 1937 and 1938 in the last two columns, are in respect of 122 Towns.

DATE.		ATMOSPHERIC ELECTRICITY. (For explanation of symbols, see Note.)	Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
JANUARY, 1938.					
Sunday	23		2.6	8.7	Overcast till 3h.; cloudy till 6h.; cloudless by 8h. Clouding 10h., overcast by 11h. Dew in morning.
Monday	24		5.4	8.7	Overcast till 9h., nearly cloudless by 10h. Dew at night.
Tuesday	25		0.9	8.8	Little cloud; nearly overcast from 1h. Variably cloudy 13h. till 16h., then cloudless. Rain or drizzle 10h. till 12h. Fresh wind 5h. till 19h. Brilliant Aurora Borealis intermittently from 19h. till 1h. on the 26th.
Wednesday	26		3.0	8.8	Cloudless till 5h., nearly overcast by 6h. Partially cloudy 9h. till 13h., overcast by 14h. Little cloud 20h. till 23h. Rain 16h. till 18h.
Thursday	27		1.7	8.9	Partially cloudy generally, thin cloud from 18h. Hoar frost and mist in morning.
Friday	28		0.0	8.9	Generally overcast. Rain 4h. till 8h. Fresh wind from 12h. till 22h., then strong wind.
Saturday	29		4.6	9.0	Overcast till 1h. Variably cloudy from 9h., then few clouds generally. Overcast from 20h. Lightning 04h. till 3h. Thunderstorm with heavy rain 2h. till 3h., then showery till 9h. Strong or high wind till 17h.
No. of Column		25	Sum 18.2	Sum 61.8	
			26	27	

The results apply to the Civil Day, or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "higher" and - "lower" than the average.

The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined.

The numbers in column 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine on each day.

The reading of the barometer increased from 30.29 ins. at the beginning of the week to 30.36 ins. by 11h. on 23rd; decreased to 30.26 ins. by 3h. on 24th; increased to 30.34 ins. by 19h. on 24th; decreased to 29.89 ins. by 14h. on 25th; increased to 30.09 by 21h. on 25th; decreased to 29.50 ins. by 2h. on 27th; increased to 29.83 ins. by 22h. on 27th; decreased to 29.00 by 3h. on 29th; increased to 29.43 ins. by 19h. on 29th; decreased and was 29.22 ins. by midnight on the same day.

# CENSUS OF ENGLAND AND WALES, 1931

Census volumes in respect of the counties of England and Wales have now been published.

Parts I of the series, which are complete, relate to the areas as constituted at the date of the Census. Parts II will deal with the changes in boundary effected by County schemes under the Local Government Act of 1929, and will provide a limited range of statistics in respect of the newly constituted areas.

Sectional volumes presenting the results of the census of industries, occupations, etc. are also available, and particulars will be furnished on application.

## EXPLANATORY STATEMENT

TABLE I shows, for London and the County Boroughs and those urban districts with resident populations exceeding 50,000 at the last Census, the number of births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday. The births relate to those registered in the area, but include births occurring in municipal maternity hospitals situate outside the area to which they belong.

The deaths are exclusive of non-residents but corrected as far as possible by the inclusion of deaths of residents in other areas. The deaths in Edinburgh and Glasgow are fully corrected for non-residents; those in Dublin and Belfast are corrected by the exclusion of deaths of non-residents occurring in public institutions.

TABLE 2 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for the previous year.

TABLE 3 is a summary of cases of certain specified infectious diseases in England and Wales notifiable under the general law or under orders made by the Local Government Board or Minister of Health and is based upon weekly returns received from the Medical Officers of Health of all Local (and Port) Sanitary Authorities.

The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are *omitted* from this Summary.

TABLE 3A is similar to Table 3, but relates to the returns received too late for inclusion in Table 3 of the previous week. It includes revised figures for England and Wales as a whole for that week.

TABLE 4 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for the previous year.

TABLE 5 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 6 is a Report of the meteorological observations taken at Greenwich on each day of the week.

Summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, are published in the Registrar-General's Quarterly Return and the Statistical Review (Part I).

## NOTES FOR THE WEEK ENDED 5th FEBRUARY, 1938

### BIRTHS AND DEATHS.

In the 125 County Boroughs and Great Towns of England and Wales the live births registered in the fifth week of the year numbered 6,575 corresponding to an annual rate of 16.2 per 1,000 living: stillbirths numbered 281 corresponding to a rate of 41 per 1,000 total births registered (including stillborn): the deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 5,063 (198 less than in the preceding week).

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 78, against 88, 78 and 69 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,277 live births registered corresponding to an annual rate of 16.1 per 1,000 living: stillbirths number 29 corresponding to a rate of 22 per 1,000 total births (including stillborn): the deaths (excluding stillbirths) numbered 1,063 (11 less than in the preceding week): infant mortality, based on the average weekly number of live births during the last 52 weeks, was 76 against 88, 74 and 67 in the preceding three weeks.

**Table 3.—Notifications of Infectious Diseases.**

**Number of cases notified in the week ended 5th February, 1938, in Administrative Areas and Port Sanitary Districts with Summary for England and Wales.**

*Note.*—Where no return has been received a \* is inserted in the columns. Totals shown against the names of Counties include any associated County Boroughs. The letters in the last column denote the following diseases :—A, Cholera; B, Plague; C, Puerperal fever (London A. C. only); D, Cerebro-spinal fever; E, Acute poliomyelitis; F, Acute poliomyelitis; G, Acute encephalitis lethargica; H, Typhus fever; I, Relapsing fever; J, Continued fever (London A. C. only); K, Dysentery; M, Ophthalmia neonatorum; N, Puerperal pyrexia†.

† By virtue of the Public Health Act, 1936, in all areas outside London A. C., conditions notifiable as puerperal fever prior to the 1st October, 1937, are, from that date, notifiable as and included with notifications of puerperal pyrexia.

**Summary.**

	Small-pox.	Scarlet fever.	Diphtheria.	Enteric (typhoid and paratyphoid) fever.	Acute pneumonia (primary or influenzal).	Cholera.	Plague.	Puerperal fever.† (London A. C. only).	Cerebro-spinal fever.	Acute poliomyelitis.	Acute poliomyelitis.	Acute encephalitis lethargica.	Typhus fever.	Relapsing fever.	Continued fever. (London A. C. only).	Dysentery.	Ophthalmia neonatorum.	Puerperal pyrexia.†

\* The figures in this Table relate to the areas as constituted at the date of the weekly returns no corrections having been made for changes in boundary. The live births are derived from the weekly returns furnished by the Registrars and differ from those published for the towns in the Quarterly Return which are corrected for births occurring away from the usual residence of the parents.

† The figures for the Great Towns in the weekly columns relate to 124 Towns up to and including the week ended 13th Nov., and thereafter to 125 Towns. The comparable totals for the years 1937 and 1938 in the last two columns, are in respect of 122 Towns.

DATE.		ATMOSPHERIC ELECTRICITY. (For explanation of symbols, <i>see</i> Note.)	Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
JANUARY, 1938.					
Sunday	30		0.5	9.0	Overcast generally. Cloudless period 17 <sup>45</sup> h. till 23h. Rain 0 <sup>45</sup> h. till 6h. Fresh wind 1h. till 7h.
Monday	31		0.0	9.1	Overcast generally. Drizzle 3h. till 5h. and 13 <sup>45</sup> h. till 15h. Squally rain from 21 <sup>45</sup> h. Fresh wind 17h. till 19h. then strong breeze.
FEBRUARY Tuesday	1		4.8	9.1	Overcast till 1 <sup>45</sup> h., little cloud by 2h. Fresh or strong wind till 21h.
Wednesday	2	Discontinued.	0.0	9.2	Cloudless till 5 <sup>45</sup> h., overcast by 7h. Cloudless 17 <sup>45</sup> h. till 21h., then cloudy. Showery 14 <sup>45</sup> h. till 16h.
Thursday	3		0.2	9.2	Overcast till 4h., little cloud till 8h., then very cloudy or nearly overcast. Clearing 21h., cloudless by 21 <sup>45</sup> h. Dew in morning and at night.
Friday	4		1.1	9.3	Cloudless, overcast generally by 1h.
Saturday	5		4.2	9.4	Nearly overcast till 2h., then cloudy, thin cloud. Dew in morning and at night. Solar halo about 15 <sup>45</sup> h.
No. of Column		23	Sum 10.8	Sum 64.3	
			26	27	

The results apply to the Civil Day, or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.	Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.	The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates " <i>higher</i> ," and - " <i>lower</i> ," than the average.	The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined.	The numbers in column 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of <i>bright</i> sunshine on each day.	The reading of the barometer decreased from 29.22 ins. at the beginning of the week to 28.93 ins. by 4h. on Jan. 30th; increased to 29.73 ins. by 23h. on Jan. 30th; decreased to 29.15 ins. by 23h. on Jan. 31st; increased to 30.29 ins. by 12h. on Feb. 4th; decreased to 30.04 ins. by 16h. on Feb. 5th; increased and was 30.09 ins. by midnight on the same day.
---	--	--	---	---	--

The results apply to the Civil Day, or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "higher" and - "lower," than the average.

The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined.

The numbers in column 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine on each day.

The reading of the barometer decreased from 29.22 ins. at the beginning of the week to 28.93 ins. by 4h. on Jan. 30th; increased to 29.73 ins. by 23h. on Jan. 30th; decreased to 29.15 ins. by 23h. on Jan. 31st; increased to 30.29 ins. by 12h. on Feb. 4th; decreased to 30.04 ins. by 16h. on Feb. 5th; increased and was 30.09 ins. by midnight on the same day.

## CENSUS OF ENGLAND AND WALES, 1931

Census volumes in respect of the counties of England and Wales have now been published.

Parts I of the series, which are complete, relate to the areas as constituted at the date of the Census. Parts II will deal with the changes in boundary effected by County schemes under the Local Government Act of 1929, and will provide a limited range of statistics in respect of the newly constituted areas.

Sectional volumes presenting the results of the census of industries, occupations, etc. are also available, and particulars will be furnished on application.

## EXPLANATORY STATEMENT

TABLE I shows, for London and the County Boroughs and those urban districts with resident populations exceeding 50,000 at the last Census, the number of births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday. The births relate to those registered in the area, but include births occurring in municipal maternity hospitals situate outside the area to which they belong.

The deaths are exclusive of non-residents but corrected as far as possible by the inclusion of deaths of residents in other areas. The deaths in Edinburgh and Glasgow are fully corrected for non-residents; those in Dublin and Belfast are corrected by the exclusion of deaths of non-residents occurring in public institutions.

TABLE 2 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for the previous year.

TABLE 3 is a summary of cases of certain specified infectious diseases in England and Wales notifiable under the general law or under orders made by the Local Government Board or Minister of Health and is based upon weekly returns received from the Medical Officers of Health of all Local (and Port) Sanitary Authorities.

The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

TABLE 3A is similar to Table 3, but relates to the returns received too late for inclusion in Table 3 of the previous week. It includes revised figures for England and Wales as a whole for that week.

TABLE 4 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for the previous year.

TABLE 5 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 6 is a Report of the meteorological observations taken at Greenwich on each day of the week.

Summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, are published in the Registrar-General's Quarterly Return and the Statistical Review (Part I).

## NOTES FOR THE WEEK ENDED 12th FEBRUARY, 1938

### BIRTHS AND DEATHS.

In the 125 County Boroughs and Great Towns of England and Wales the live births registered in the sixth week of the year numbered 6,688 corresponding to an annual rate of 16.5 per 1,000 living; stillbirths numbered 301 corresponding to a rate of 43 per 1,000 total births registered (including stillborn); the deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 4,866 (197 less than in the preceding week).

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 76, against 78, 69 and 78 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,271 live births registered corresponding to an annual rate of 16.0 per 1,000 living; stillbirths number 49 corresponding to a rate of 37 per 1,000 total births (including stillborn); the deaths (excluding stillbirths) numbered 921 (142 less than in the preceding week); infant mortality, based on the average weekly number of live births during the last 52 weeks, was 63, against 74, 67 and 76 in the preceding three weeks.

Table 3.—Notifications of Infectious Diseases.

Number of cases notified in the week ended 12th February, 1938, in Administrative Areas and Port Sanitary Districts with Summary for England and Wales.

*Note.*—Where no return has been received a \* is inserted in the columns. Totals shown against the names of Counties include any associated County Boroughs. The letters in the last column denote the following diseases:—A, Cholera; B, Plague; C, Puerperal fever (London A. C. only); D, Cerebro-spinal fever; E, Acute poliomyelitis; F, Acute polio-encephalitis; G, Acute encephalitis lethargica; H, Typhus fever; I, Relapsing fever; J, Continued fever (London A. C. only); L, Dysentery; M, Ophthalmia neonatorum; N, Puerperal pyrexia†.

† By virtue of the Public Health Act, 1936, in all areas outside London A. C., conditions notifiable as puerperal fever prior to the 1st October, 1937, are, from that date, notifiable as and included with notifications of puerperal pyrexia.

## Summary.

	Small-pox.	Scarlet fever.	Diphtheria.	Enteric (typhoid and paratyphoid) fever.	Acute pneumonia (primary or influenzal).	Cholera.	Plague.	Puerperal fever.† (London A. C. only).	Cerebro-spinal fever.	Acute poliomyelitis.	Acute polioencephalitis	Acute encephalitis lethargica.	Typhus fever.	Relapsing fever.	Continued fever. (London A. C. only).	Dysentery.	Ophthalmia neonatorum.	Puerperal pyrexia.†

\* The figures in this Table relate to the areas as constituted at the date of the weekly returns no corrections having been made for changes in boundary. The live births are derived from the weekly returns furnished by the Registrars and differ from those published for the towns in the Quarterly Return which are corrected for births occurring away from the usual residence of the parents.

† The figures for the Great Towns in the weekly columns relate to 124 Towns up to and including the week ended 13th Nov., and thereafter to 125 Towns. The comparable totals for the years 1937 and 1938 in the last two columns, are in respect of 122 Towns.

Wednesday	9	Discontinued.	2.8	9.6	Overcast, except for period of little cloud 8h. till 11h. Solar halo 12½h. Slight rain 14½h. till 15½h.
Thursday	10		0.7	9.7	Overcast till 14h., clearing to little cloud by 15½h. Rain 22½h. till 13½h. Overcast period with shower of rain and hail about 20h. Fresh wind from 5h.
Friday	11		6.0	9.7	Few clouds generally till 20h., then very cloudy.
Saturday	12		3.7	9.8	Very cloudy till 9h., then few clouds. Very cloudy generally from 13h. Showers 6½h. and at 14½h. Squall with rain and hail at 15h. 25m. and occasional rain from 23h. Strong squally wind from 10h.
No. of Column		25	Sum 13.3	Sum 67.2	27

The results apply to the Civil Day, or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading, columns 8 and 23 it will be borne in mind that + indicates "higher" and - "lower" than the average.

The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined. The numbers in column 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine on each day.

The reading of the barometer increased from 30.09 ins. at the beginning of the week to 30.30 ins. by 1h. on Feb. 7th; decreased to 29.77 ins. by 12h. on Feb. 10th; increased to 30.39 ins. by 12h. on Feb. 11th; decreased to 29.82 ins. by 15h on Feb. 12th; increased and was 29.93 ins. by midnight on the same day.

## CENSUS OF ENGLAND AND WALES, 1931

Census volumes in respect of the counties of England and Wales have now been published.

Parts I of the series, which are complete, relate to the areas as constituted at the date of the Census. Parts II will deal with the changes in boundary effected by County schemes under the Local Government Act of 1929, and will provide a limited range of statistics in respect of the newly constituted areas.

Sectional volumes presenting the results of the census of industries, occupations, etc. are also available, and particulars will be furnished on application.

## EXPLANATORY STATEMENT

TABLE I shows, for London and the County Boroughs and those urban districts with resident populations exceeding 50,000 at the last Census, the number of births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday. The births relate to those registered in the area, but include births occurring in municipal maternity hospitals situate outside the area to which they belong.

The deaths are exclusive of non-residents but corrected as far as possible by the inclusion of deaths of residents in other areas. The deaths in Edinburgh and Glasgow are fully corrected for non-residents; those in Dublin and Belfast are corrected by the exclusion of deaths of non-residents occurring in public institutions.

TABLE 2 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for the previous year.

TABLE 3 is a summary of cases of certain specified infectious diseases in England and Wales notifiable under the general law or under orders made by the Local Government Board or Minister of Health and is based upon weekly returns received from the Medical Officers of Health of all Local (and Port) Sanitary Authorities.

The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

TABLE 3A is similar to Table 3, but relates to the returns received too late for inclusion in Table 3 of the previous week. It includes revised figures for England and Wales as a whole for that week.

TABLE 4 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for the previous year.

TABLE 5 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 6 is a Report of the meteorological observations taken at Greenwich on each day of the week.

Summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, are published in the Registrar-General's Quarterly Return and the Statistical Review (Part I).

## NOTES FOR THE WEEK ENDED 19th FEBRUARY, 1938

### BIRTHS AND DEATHS.

In the 125 County Boroughs and Great Towns of England and Wales the live births registered in the seventh week of the year numbered 6,204 corresponding to an annual rate of 15.3 per 1,000 living: stillbirths numbered 272 corresponding to a rate of 4.2 per 1,000 total births registered (including stillborn): the deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 5,194 (328 more than in the preceding week).

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 78, against 69, 78 and 76 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,156 live births registered corresponding to an annual rate of 14.6 per 1,000 living: stillbirths number 36 corresponding to a rate of 3.0 per 1,000 total births (including stillborn): the deaths (excluding stillbirths) numbered 1020 (99 more than in the preceding week): infant mortality, based on the average weekly number of live births during the last 52 weeks, was 71, against 67, 76 and 63 in the preceding three weeks.

Table 3.—Notifications of Infectious Diseases.

Number of cases notified in the week ended 19th February, 1938, in Administrative Areas and Port Sanitary Districts with Summary for England and Wales.

*Note.*—Where no return has been received a \* is inserted in the columns. Totals shown against the names of Counties include any associated County Boroughs. The letters in the last column denote the following diseases :—A, Cholera ; B, Plague ; C, Puerperal fever (London A. C. only) ; D, Cerebro-spinal fever ; E, Acute poliomyelitis ; F, Acute polio-encephalitis ; G, Acute encephalitis lethargica ; H, Typhus fever ; I, Relapsing fever ; J, Continued fever (London A. C. only) ; L, Dysentery ; M, Ophthalmia neonatorum ; N, Puerperal pyrexia†.

† By virtue of the Public Health Act, 1936, in all areas outside London A. C., conditions notifiable as puerperal fever prior to the 1st October, 1937, are, from that date, notifiable as and included with notifications of puerperal pyrexia†.

## Summary.

Table 3.—Notifications of Infectious Diseases—continued.

	Small-pox.	Scarlet fever.	Diphtheria.	Enteric (typhoid & paratyphoid) fever.	Acute pneumonia (prim'ry or influenz'!).	Other diseases (see note at head of table).		Small-pox.	Scarlet fever.	Diphtheria.	Enteric (typhoid & paratyphoid) fever.	Acute pneumonia (prim'ry or influenz'!).	Other diseases (see note at head of table).

# CORRIGENDUM.

REGISTRAR-GENERAL'S WEEKLY RETURN NO. 6.

Week ended 12th February, 1938.

Page 162, Table 3A.

*England and Wales totals should read as follows:—*

	Small-pox.	Scarlet fever.	Diphtheria.	Enteric (typhoid and paratyphoid) fever.	Acute pneumonia (primary or influenzal).	Cholera.	Plague.	Puerperal fever.	Cerebro-spinal fever.	Acute poliomyelitis.	Acute polioencephalitis.	Acute encephalitis lethargica.	Typhus fever.	Relapsing fever.	Continued fever.	Dysentery.	Ophthalmia neonatorum.	Puerperal pyrexia.

\* The figures in this Table relate to the areas as constituted at the date of the weekly returns no corrections having been made for changes in boundary. The live births are derived from the weekly returns furnished by the Registrars and differ from those published for the towns in the Quarterly Return which are corrected for births occurring away from the usual residence of the parents.

† The figures for the Great Towns in the weekly columns relate to 124 Towns up to and including the week ended 13th Nov., and thereafter to 125 Towns. The comparable totals for the years 1937 and 1938 in the last two columns, are in respect of 122 Towns.

DATE.		ATMOSPHERIC ELECTRICITY (For explanation of symbols, see Note.)	Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
FEBRUARY, 1938.					
Sunday	13		3.6	9.8	Nearly overcast till 8h., generally cloudy till 14h., then overcast. Slight rain 4h. till 6h. Snow 14h. till 16h., and occasionally 18h. till 19h.
Monday	14		2.7	9.9	Generally cloudy. Occasional snow 8h. till 19h.
Tuesday	15		0.0	10.0	Overcast throughout. Occasional snow.
Wednesday	16	Discontinued.	0.0	10.0	Overcast throughout. Occasional snow or sleet till 17h.
Thursday	17		0.0	10.1	Overcast; variably cloudy from 19h. Sleet or snow 10h. till 15h. Hoar frost at night.
Friday	18		6.2	10.1	Variably cloudy; overcast from 4h. Clearing 9h. to cloudless by 10h. Cloudy from 21h.
Saturday	19		0.9	10.2	Generally cloudy till 10h., then overcast or nearly so. Clearing 18h. to cloudless by 19h. Hoar frost at night.
No. of Column		25	Sum 13.4	Sum 70.1	27

The results apply to the Civil Day, or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

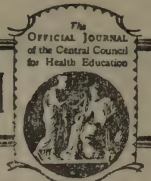

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "higher," and - "lower," than the average.

The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined.

The numbers in column 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine on each day.

The reading of the barometer increased from 29.93 ins. at the beginning of the week to 30.13 ins. by 23h. on Feb. 14th; decreased generally to 30.00 ins. by 12h. on Feb. 17th; increased to 30.28 ins. by 1h. on Feb. 18th; decreased to 30.13 ins. by 15h. on Feb. 18th; increased and was 30.33 ins. by midnight on Feb. 19h.

# BETTER HEALTH

36/38, Whitefriars Street, London, E.C.4.

The Official Journal of the Central Council for Health Education. It is intended to carry simple, non-technical and accurate teaching on the prevention of disease into the homes of the people. With the assistance of upwards of 150 health departments, the circulation has now reached 300,000 copies per month.

Quantities are supplied at special prices for local distribution. Write for specimen copy and particulars.

## THE REGISTRAR-GENERAL'S STATISTICAL REVIEW FOR 1935

### TEXT

A comprehensive study of the fluctuation of population in the year under review and the causes relating thereto. All causes of death are investigated and tables are included showing comparison with a number of previous years. Other Sections deal with estimates of population ; marriages ; live births ; still births ; natural increase ; births and deaths at sea ; registration of births, deaths and marriages ; etc.

## EXPLANATORY STATEMENT

TABLE I shows, for London and the County Boroughs and those urban districts with resident populations exceeding 50,000 at the last Census, the number of births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday. The births relate to those registered in the area, but include births occurring in municipal maternity hospitals situate outside the area to which they belong.

The deaths are exclusive of non-residents but corrected as far as possible by the inclusion of deaths of residents in other areas. The deaths in Edinburgh and Glasgow are fully corrected for non-residents; those in Dublin and Belfast are corrected by the exclusion of deaths of non-residents occurring in public institutions.

TABLE 2 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for the previous year.

TABLE 3 is a summary of cases of certain specified infectious diseases in England and Wales notifiable under the general law or under orders made by the Local Government Board or Minister of Health and is based upon weekly returns received from the Medical Officers of Health of all Local (and Port) Sanitary Authorities.

The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are *omitted* from this Summary.

TABLE 3A is similar to Table 3, but relates to the returns received too late for inclusion in Table 3 of the previous week. It includes revised figures for England and Wales as a whole for that week.

TABLE 4 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for the previous year.

TABLE 5 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 6 is a Report of the meteorological observations taken at Greenwich on each day of the week.

Summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, are published in the Registrar-General's Quarterly Return and the Statistical Review (Part I).

## NOTES FOR THE WEEK ENDED 26th FEBRUARY, 1938

### BIRTHS AND DEATHS.

In the 125 County Boroughs and Great Towns of England and Wales the live births registered in the eighth week of the year numbered 6,870 corresponding to an annual rate of 16.9 per 1,000 living: stillbirths numbered 267 corresponding to a rate of 37 per 1,000 total births registered (including stillborn): the deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 5,609 (415 more than in the preceding week).

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 79, against 78, 76 and 78 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,298 live births registered corresponding to an annual rate of 16.3 per 1,000 living: stillbirths number 36 corresponding to a rate of 27 per 1,000 total births (including stillborn): the deaths (excluding stillbirths) numbered 1,078 (58 more than in the preceding week): infant mortality, based on the average weekly number of live births during the last 52 weeks, was 63, against 76, 63 and 71 in the preceding three weeks.

**Table 3.—Notifications of Infectious Diseases.**

**Number of cases notified in the week ended 26th February, 1938, in Administrative Areas and Port Sanitary Districts with Summary for England and Wales.**

*Note.*—Where no return has been received a \* is inserted in the columns. Totals shown against the names of Counties include any associated County Boroughs. The letters in the last column denote the following diseases:—A, Cholera; B, Plague; C, Puerperal fever (London A. C. only); D, Cerebro-spinal fever; E, Acute poliomyelitis; F, Acute polio-encephalitis; G, Acute encephalitis lethargica; H, Typhus fever; I, Relapsing fever; J, Continued fever (London A. C. only); L, Dysentery; M, Ophthalmia neonatorum; N, Puerperal pyrexia†.

† By virtue of the Public Health Act, 1936, in all areas outside London A. C., conditions notifiable as puerperal fever prior to the 1st October, 1937, are, from that date, notifiable as and included with notifications of puerperal pyrexia.

**Summary.**

	Small-pox.	Scarlet fever.	Diphtheria.	Enteric (typhoid and paratyphoid) fever.	Acute pneumonia (primary or influenzal).	Cholera.	Plague.	Puerperal fever.† (London A. C. only).	Cerebro-spinal fever.	Acute poliomyelitis.	Acute polioencephalitis	Acute encephalitis lethargica.	Typhus fever.	Relapsing fever.	Continued fever. (London A. C. only).	Dysentery.	Ophthalmia neonatorum.	Puerperal pyrexia.†

\* The figures in this Table relate to the areas as constituted at the date of the weekly returns no corrections having been made for changes in boundary. The live births are derived from the weekly returns furnished by the Registrars and differ from those published for the towns in the Quarterly Return which are corrected for births occurring away from the usual residence of the parents.

† The figures for the Great Towns in the weekly columns relate to 125 Towns. The comparable totals for the years 1937 and 1938 in the last two columns, are in respect of 122 Towns.

Table 5.—Meteorology in certain Towns during the Week ended Saturday, 26th February, 1938.

DATE.		ATMOSPHERIC ELECTRICITY. (For explanation of symbols, see Note.)	Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.	<p>The results apply to the Civil Day, or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.</p> <p>Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.</p> <p>The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "<i>higher</i>" and - "<i>lower</i>," than the average.</p> <p>The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined.</p> <p>The numbers in column 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of <i>bright</i> sunshine on each day.</p> <p>The reading of the barometer increased from 30·34 ins. at the beginning of the week to 30·40 ins. by 10h. on Feb. 20th; decreased generally to 29·74 ins. by 23h. on Feb. 20th increased and was 29·75 ins. by midnight on the same day.</p>
FEBRUARY, 1938.						
Sunday	... 20		1·0	10·3	Cloudless generally till 9h.; becoming overcast by 10h. Hoar frost and slight mist in morning.	
Monday	... 21		0·0	10·4	Overcast throughout. Damping about 6h. and 8h. Mist in morning.	
Tuesday	... 22		0·0	10·4	Overcast except for a cloudless period 18h. till 20h. Occasional slight snow 9h. till 14h. Hoar frost in evening.	
Wednesday	... 23	Discontinued.	4·4	10·5	Overcast till 6h., then generally cloudy. Cloudless from 22h. Mist in morning.	
Thursday	... 24		5·5	10·5	Cloudless till 9h., then partially cloudy. Cloudless or nearly so from 15h. Solar halo 13h. Mist in morning. Hoar frost in morning and at night.	
Friday	... 25		1·4	10·6	Cloudless till 5h., then nearly overcast except for a period of few clouds between 18h. and 21h. Hoar frost and fog in morning.	
Saturday	... 26		1·6	10·7	Overcast till 8h., then partially cloudy. Overcast again from 13h. Rain 18h. till 19h. Fresh wind from 19h.

## CENSUS OF ENGLAND AND WALES, 1931

Census volumes in respect of the counties of England and Wales have now been published.

Parts I of the series, which are complete, relate to the areas as constituted at the date of the Census. Parts II will deal with the changes in boundary effected by County schemes under the Local Government Act of 1929, and will provide a limited range of statistics in respect of the newly constituted areas.

Sectional volumes presenting the results of the census of industries, occupations, etc. are also available, and particulars will be furnished on application.

## EXPLANATORY STATEMENT

TABLE I shows, for London and the County Boroughs and those urban districts with resident populations exceeding 50,000 at the last Census, the number of births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday. The births relate to those registered in the area, but include births occurring in municipal maternity hospitals situate outside the area to which they belong.

The deaths are exclusive of non-residents but corrected as far as possible by the inclusion of deaths of residents in other areas. The deaths in Edinburgh and Glasgow are fully corrected for non-residents; those in Dublin and Belfast are corrected by the exclusion of deaths of non-residents occurring in public institutions.

TABLE 2 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for the previous year.

TABLE 3 is a summary of cases of certain specified infectious diseases in England and Wales notifiable under the general law or under orders made by the Local Government Board or Minister of Health and is based upon weekly returns received from the Medical Officers of Health of all Local (and Port) Sanitary Authorities.

The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are *omitted* from this Summary.

TABLE 3A is similar to Table 3, but relates to the returns received too late for inclusion in Table 3 of the previous week. It includes revised figures for England and Wales as a whole for that week.

TABLE 4 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for the previous year.

TABLE 5 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 6 is a Report of the meteorological observations taken at Greenwich on each day of the week.

Summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, are published in the Registrar-General's Quarterly Return and the Statistical Review (Part I).

## NOTES FOR THE WEEK ENDED 5th MARCH, 1938

### BIRTHS AND DEATHS.

In the 125 **County Boroughs and Great Towns** of England and Wales the live births registered in the ninth week of the year numbered 6,823 corresponding to an annual rate of 16.8 per 1,000 living: stillbirths numbered 267 corresponding to a rate of 38 per 1,000 total births registered (including stillborn): the deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 5,449 (161 less than in the preceding week).

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 70, against 76, 78 and 79 in the preceding three weeks.

In **London** (Administrative County including the City of London) there were 1,249 live births registered corresponding to an annual rate of 15.7 per 1,000 living: stillbirths number 28 corresponding to a rate of 22 per 1,000 total births (including stillborn): the deaths (excluding stillbirths) numbered 1,108 (30 more than in the preceding week): infant mortality, based on the average weekly number of live births during the last 52 weeks, was 58, against 63, 71 and 63 in the preceding three weeks.

**Table 3.—Notifications of Infectious Diseases.**

**Number of cases notified in the week ended 5th March, 1938, in Administrative Areas and Port Sanitary Districts with Summary for England and Wales.**

*Note.*—Where no return has been received a \* is inserted in the columns. Totals shown against the names of Counties include any associated County Boroughs. The letters in the last column denote the following diseases:—A, Cholera; B, Plague; C, Puerperal fever (London A. C. only); D, Cerebro-spinal fever; E, Acute poliomyelitis; F, Acute polio-encephalitis; G, Acute encephalitis lethargica; H, Typhus fever; I, Relapsing fever; J, Continued fever (London A. C. only); L, Dysentery; M, Ophthalmia neonatorum; N, Puerperal pyrexia†.

† By virtue of the Public Health Act, 1936, in all areas outside London A. C., conditions notifiable as puerperal fever prior to the 1st October, 1937, are, from that date, notifiable as and included with notifications of puerperal pyrexia.

**Summary.**

	Small-pox.	Scarlet fever.	Diphtheria.	Enteric (typhoid and paratyphoid) fever.	Acute pneumonia (primary or influenzal).	Cholera.	Plague.	Puerperal fever. (London A. C. only).	Cerebro-spinal fever.	Acute poliomyelitis.	Acute polioencephalitis.	Acute encephalitis lethargica.	Typhus fever.	Relapsing fever.	Continued fever. (London A. C. only).	Dysentery.	Ophthalmia neonatorum.	Puerperal pyrexia.†

\* The figures in this Table relate to the areas as constituted at the date of the weekly returns no corrections having been made for changes in boundary. The live births are derived from the weekly returns furnished by the Registrars and differ from those published for the towns in the Quarterly Return which are corrected for births occurring away from the usual residence of the parents.

† The figures for the Great Towns in the weekly columns relate to 125 Towns. The comparable totals for the years 1937 and 1938 in the last two columns, are in respect of 122 Towns.

DATE.		ATMOSPHERIC ELECTRICITY. (For explanation of symbols, see Note.)	Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
FEBRUARY, 1938.					
Sunday	27		5.5	10.8	Overcast till 6h.; little cloud by 7h.; Cloudy 14h. till 15½h., then overcast. Rain or slight rain 16h. till 18½h. and 20½h. till 21h. Strong wind till 9h. then fresh wind.
Monday	28		0.1	10.8	Overcast generally. Rain about 4h. and at 6½h. and from 23½h.
MARCH Tuesday	1		5.7	10.9	Overcast till 7h., then partially cloudy. Cloudless from 18h. Rain till 0½h., then damping till 3h.
Wednesday	2	Discontinued.	4.3	10.9	Cloudless till 4h., becoming nearly overcast by 5h. Clearing after 12h., little cloud from 13½h. Hoar frost in morning.
Thursday	3		9.6	11.0	Cloudless throughout. Dew in morning.
Friday	4		8.5	11.1	Cloudless or nearly so. Hazy during day, becoming foggy about 17h.
Saturday	5		7.2	11.1	Foggy, thick at times till 0½h., clearing by 10½h., then cloudless or nearly so. Hoar frost in morning.

The results apply to the Civil Day, or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean readings of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "higher" and - "lower" than the average.

The values given in column 16 are not corrected for the index error of the thermometer which cannot be determined.

The numbers in column 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer increased from 29.75 ins. at the beginning of the week to 30.19 ins. by 17h. on Feb. 27th; decreased to 29.85 ins. by 4h. on March 1st, increased to 30.54 ins. by 23½h. on March 4th; decreased and was 30.35 ins. by midnight on March 5th.

## CENSUS OF ENGLAND AND WALES, 1931

Census volumes in respect of the counties of England and Wales have now been published.

Parts I of the series, which are complete, relate to the areas as constituted at the date of the Census. Parts II will deal with the changes in boundary effected by County schemes under the Local Government Act of 1929, and will provide a limited range of statistics in respect of the newly constituted areas.

Sectional volumes presenting the results of the census of industries, occupations, etc. are also available, and particulars will be furnished on application.

## EXPLANATORY STATEMENT

TABLE I shows, for London and the County Boroughs and those urban districts with resident populations exceeding 50,000 at the last Census, the number of births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday. The births relate to those registered in the area, but include births occurring in municipal maternity hospitals situate outside the area to which they belong.

The deaths are exclusive of non-residents but corrected as far as possible by the inclusion of deaths of residents in other areas. The deaths in Edinburgh and Glasgow are fully corrected for non-residents; those in Dublin and Belfast are corrected by the exclusion of deaths of non-residents occurring in public institutions.

TABLE 2 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for the previous year.

TABLE 3 is a summary of cases of certain specified infectious diseases in England and Wales notifiable under the general law or under orders made by the Local Government Board or Minister of Health and is based upon weekly returns received from the Medical Officers of Health of all Local (and Port) Sanitary Authorities.

The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are *omitted* from this Summary.

TABLE 3A is similar to Table 3, but relates to the returns received too late for inclusion in Table 3 of the previous week. It includes revised figures for England and Wales as a whole for that week.

TABLE 4 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for the previous year.

TABLE 5 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 6 is a Report of the meteorological observations taken at Greenwich on each day of the week.

Summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, are published in the Registrar-General's Quarterly Return and the Statistical Review (Part I).

## NOTES FOR THE WEEK ENDED 12th MARCH, 1938

### BIRTHS AND DEATHS.

In the 125 County Boroughs and Great Towns of England and Wales the live births registered in the tenth week of the year numbered 6,899 corresponding to an annual rate of 17.0 per 1,000 living: stillbirths numbered 270 corresponding to a rate of 38 per 1,000 total births registered (including stillborn): the deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 5,559 (112 more than in the preceding week).

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 67, against 78, 79 and 69 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,271 live births registered corresponding to an annual rate of 16.0 per 1,000 living: stillbirths number 55 corresponding to a rate of 41 per 1,000 total births (including stillborn): the deaths (excluding stillbirths) numbered 1,147 (39 more than in the preceding week): infant mortality, based on the average weekly number of live births during the last 52 weeks, was 63, against 71, 63 and 58 in the preceding three weeks.

Table 3.—Notifications of Infectious Diseases.

Number of cases notified in the week ended 12th March, 1938, in Administrative Areas and Port Sanitary Districts with Summary for England and Wales.

*Note.*—Where no return has been received a \* is inserted in the columns. Totals shown against the names of Counties include any associated County Boroughs. The letters in the last column denote the following diseases:—A, Cholera; B, Plague; C, Puerperal fever (London A. C. only); D, Cerebro-spinal fever; E, Acute poliomyelitis; F, Acute polio-encephalitis; G, Acute encephalitis lethargica; H, Typhus fever; I, Relapsing fever; J, Continued fever (London A. C. only); L, Dysentery; M, Ophthalmia neonatorum; N, Puerperal pyrexia†.

† By virtue of the Public Health Act, 1936, in all areas outside London A. C., conditions notifiable as puerperal fever prior to the 1st October, 1937, are, from that date, notifiable as and included with notifications of puerperal pyrexia.

Summary.

	Small-pox.	Scarlet fever.	Diphtheria.	Enteric (typhoid and paratyphoid) fever.	Acute pneumonia (primary or influenzal).	Cholera.	Plague.	Puerperal fever. (London A. C. only).	Cerebro-spinal fever.	Acute poliomyelitis.	Acute polioencephalitis	Acute encephalitis lethargica.	Typhus fever.	Relapsing fever.	Continued fever. (London A. C. only).	Dysentery.	Ophthalmia neonatorum.	Puerperal pyrexia. †

\* The figures in this Table relate to the areas as constituted at the date of the weekly returns no corrections having been made for changes in boundary. The live births are derived from the weekly returns furnished by the Registrars and differ from those published for the towns in the Quarterly Return which are corrected for births occurring away from the usual residence of the parents.

† The figures for the Great Towns in the weekly columns relate to 125 Towns. The comparable totals for the years 1937 and 1938 in the last two columns, are in respect of 122 Towns.

Table 5.—Meteorology in certain Towns during the Week ended Saturday, 12th March, 1938.

DATE.		ATMOSPHERIC ELECTRICITY. (For explanation of symbols, see Note.)	Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
MARCH, 1938.					
Sunday	6		7.6	11.2	Cloudless or nearly so. Hazy during day. Mist at night.
Monday	7		5.1	11.3	Cloudless or nearly so. Hoar frost in morning and at night. Occasional solar halo 12h. till 15h. Mist or fog at night.
Tuesday	8		6.6	11.3	Nearly cloudless. Fog, thick between 8h. and 10h., cleared by 11h. Cloud at times after 23h.
Wednesday	9	Discontinued.	6.2	11.4	Cloudy till 4h. then cloudless. Generally cloudy from 11h. till 20h., then overcast.
Thursday	10		0.5	11.5	Overcast or nearly so.
Friday	11		3.2	11.5	Overcast or nearly so till 14h.; little cloud by 16h. Cloudless 18h. till 21h., becoming overcast by 22h. Mist in morning.
Saturday	12		4.6	11.6	Overcast till 12h., clearing to little cloud by 13h. Cloudless from 18h. Hoar frost at night.
No. of Column		25	Sum 33.8	Sum 79.8	

The results apply to the Civil Day, or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates *higher*, and - *lower*, than the average.

The values given in column 10 are not corrected for the index error of the thermometer, which cannot be determined.

The numbers in column 25, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer decreased from 30.35 ins. at the beginning of the week to 29.94 ins. by 16h. on the 9th; increased to 30.43 ins. by 12h. on the 12th decreased and was 30.41 ins. by midnight on the same day.

## CENSUS OF ENGLAND AND WALES, 1931

Census volumes in respect of the counties of England and Wales have now been published.

Parts I of the series, which are complete, relate to the areas as constituted at the date of the Census. Parts II will deal with the changes in boundary effected by County schemes under the Local Government Act of 1929, and will provide a limited range of statistics in respect of the newly constituted areas.

Sectional volumes presenting the results of the census of industries, occupations, etc. are also available, and particulars will be furnished on application.

## EXPLANATORY STATEMENT

TABLE I shows, for London and the County Boroughs and those urban districts with resident populations exceeding 50,000 at the last Census, the number of births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday. The births relate to those registered in the area, but include births occurring in municipal maternity hospitals situate outside the area to which they belong.

The deaths are exclusive of non-residents but corrected as far as possible by the inclusion of deaths of residents in other areas. The deaths in Edinburgh and Glasgow are fully corrected for non-residents; those in Dublin and Belfast are corrected by the exclusion of deaths of non-residents occurring in public institutions.

TABLE 2 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for the previous year.

TABLE 3 is a summary of cases of certain specified infectious diseases in England and Wales notifiable under the general law or under orders made by the Local Government Board or Minister of Health and is based upon weekly returns received from the Medical Officers of Health of all Local (and Port) Sanitary Authorities.

The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are *omitted* from this Summary.

TABLE 3A is similar to Table 3, but relates to the returns received too late for inclusion in Table 3 of the previous week. It includes revised figures for England and Wales as a whole for that week.

TABLE 4 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for the previous year.

TABLE 5 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 6 is a Report of the meteorological observations taken at Greenwich on each day of the week.

Summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, are published in the Registrar-General's Quarterly Return and the Statistical Review (Part I).

## NOTES FOR THE WEEK ENDED 19th MARCH, 1938

### BIRTHS AND DEATHS.

In the 125 County Boroughs and Great Towns of England and Wales the live births registered in the eleventh week of the year numbered 7,022 corresponding to an annual rate of 17.3 per 1,000 living: stillbirths numbered 249 corresponding to a rate of 34 per 1,000 total births registered (including stillborn): the deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 5,225 (333 less than in the preceding week).

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 68, against 79, 69 and 67 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,364 live births registered corresponding to an annual rate of 17.2 per 1,000 living: stillbirths number 35 corresponding to a rate of 25 per 1,000 total births (including stillborn): the deaths (excluding stillbirths) numbered 1,042 (105 less than in the preceding week): infant mortality, based on the average weekly number of live births during the last 52 weeks, was 73, against 63, 58 and 63 in the preceding three weeks.

Table 3.—Notifications of Infectious Diseases.

Number of cases notified in the week ended 19th March, 1938, in Administrative Areas and Port Sanitary Districts with Summary for England and Wales.

*Note.*—Where no return has been received a \* is inserted in the columns. Totals shown against the names of Counties include any associated County Boroughs. The letters in the last column denote the following diseases:—A, Cholera; B, Plague; C, Puerperal fever (London A. C. only); D, Cerebro-spinal fever; E, Acute poliomyelitis; F, Acute polio-encephalitis; G, Acute encephalitis lethargica; H, Typhus fever; I, Relapsing fever; J, Continued fever (London A. C. only); L, Dysentery; M, Ophthalmia neonatorum; N, Puerperal pyrexia†.

† By virtue of the Public Health Act, 1936, in all areas outside London A. C., conditions notifiable as puerperal fever prior to the 1st October, 1937, are, from that date, notifiable as and included with notifications of puerperal pyrexia.

Summary.

	Small-pox.	Scarlet fever.	Diphtheria.	Enteric (typhoid and paratyphoid) fever.	Acute pneumonia (primary or influenza).	Cholera.	Plague.	Puerperal fever. (London A. C. only).	Cerebro-spinal fever.	Acute poliomyelitis.	Acute poliioencephalitis	Acute encephalitis lethargica.	Typhus fever.	Relapsing fever.	Continued fever. (London A. C. only).	Dysentery.	Ophthalmia neonatorum.	Puerperal pyrexia.†

\* The figures in this Table relate to the areas as constituted at the date of the weekly returns no corrections having been made for changes in boundary. The live births are derived from the weekly returns furnished by the Registrars and differ from those published for the towns in the Quarterly Return which are corrected for births occurring away from the usual residence of the parents.

† The figures for the Great Towns in the weekly columns relate to 125 Towns. The comparable totals for the years 1937 and 1938 in the last two columns, are in respect of 122 Towns.

			26	27	

The results apply to the Civil Day, or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1903, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "higher" and - "lower" than the average.

The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined.

The numbers in column 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer decreased from 30.41 ins. at the beginning of the week to 29.91 ins. by 15h. on March 16th; increased to 30.14 ins. by 10h. on March 18th; decreased and was 29.94 ins. by midnight on March 19th.

## THE REGISTRAR-GENERAL'S STATISTICAL REVIEW FOR 1935

### TEXT

A comprehensive study of the fluctuation of population in the year under review and the causes relating thereto. All causes of death are investigated and tables are included showing comparison with a number of previous years. Other Sections deal with estimates of population ; marriages ; live births ; still births ; natural increase ; births and deaths at sea ; registration of births, deaths and marriages ; etc.

## EXPLANATORY STATEMENT

TABLE I shows, for London and the County Boroughs and those urban districts with resident populations exceeding 50,000 at the last Census, the number of births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday. The births relate to those registered in the area, but include births occurring in municipal maternity hospitals situate outside the area to which they belong.

The deaths are exclusive of non-residents but corrected as far as possible by the inclusion of deaths of residents in other areas. The deaths in Edinburgh and Glasgow are fully corrected for non-residents; those in Dublin and Belfast are corrected by the exclusion of deaths of non-residents occurring in public institutions.

TABLE 2 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for the previous year.

TABLE 3 is a summary of cases of certain specified infectious diseases in England and Wales notifiable under the general law or under orders made by the Local Government Board or Minister of Health and is based upon weekly returns received from the Medical Officers of Health of all Local (and Port) Sanitary Authorities.

The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are *omitted* from this Summary.

TABLE 3A is similar to Table 3, but relates to the returns received too late for inclusion in Table 3 of the previous week. It includes revised figures for England and Wales as a whole for that week.

TABLE 4 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for the previous year.

TABLE 5 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 6 is a Report of the meteorological observations taken at Greenwich on each day of the week.

Summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, are published in the Registrar-General's Quarterly Return and the Statistical Review (Part I).

## NOTES FOR THE WEEK ENDED 26th MARCH, 1938

### BIRTHS AND DEATHS.

In the 125 County Boroughs and Great Towns of England and Wales the live births registered in the twelfth week of the year numbered 6,769 corresponding to an annual rate of 16.7 per 1,000 living: stillbirths numbered 283 corresponding to a rate of 40 per 1,000 total births registered (including stillborn): the deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 4,994 (231 less than in the preceding week).

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 65, against 69, 67 and 68 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,239 live births registered corresponding to an annual rate of 15.6 per 1,000 living: stillbirths number 31 corresponding to a rate of 24 per 1,000 total births (including stillborn): the deaths (excluding stillbirths) numbered 991 (51 less than in the preceding week): infant mortality, based on the average weekly number of live births during the last 52 weeks, was 62, against 58, 63 and 73 in the preceding three weeks.

Table 3.—Notifications of Infectious Diseases.

Number of cases notified in the week ended 26th March, 1938, in Administrative Areas and Port Sanitary Districts with Summary for England and Wales.

*Note.*—Where no return has been received a \* is inserted in the columns. Totals shown against the names of Counties include any associated County Boroughs. The letters in the last column denote the following diseases:—A, Cholera; B, Plague; C, Puerperal fever (London A. C. only); D, Cerebro-spinal fever; E, Acute poliomyelitis; F, Acute poli-encephalitis; G, Acute encephalitis lethargica; H, Typhus fever; I, Relapsing fever; J, Continued fever (London A. C. only); L, Dysentery; M, Ophthalmia neonatorum; N, Puerperal pyrexia†.

† By virtue of the Public Health Act, 1936, in all areas outside London A. C., conditions notifiable as puerperal fever prior to the 1st October, 1937, are, from that date, notifiable as and included with notifications of puerperal pyrexia.

Summary.

		Small-pox.	Scarlet fever.	Diphtheria.	Enteric (typhoid and paratyphoid) fever.	Acute pneumonia (primary or influenzal).	Cholera.	Plague.	Puerperal fever. (London A. C. only).	Cerebro-spinal fever.	Acute poliomyelitis.	Acute poli-encephalitis	Acute encephalitis lethargica.	Typhus fever.	Relapsing fever.	Continued fever. (London A. C. only).	Dysentery.	Ophthalmia neonatorum.	Puerperal pyrexia.†

\* The figures in this Table relate to the areas as constituted at the date of the weekly returns no corrections having been made for changes in boundary. The live births are derived from the weekly returns furnished by the Registrars and differ from those published for the towns in the Quarterly Return which are corrected for births occurring away from the usual residence of the parents.

† The figures for the Great Towns in the weekly columns relate to 125 Towns. The comparable totals for the years 1937 and 1938 in the last two columns, are in respect of 122 Towns.

DATE.		ATMOSPHERIC ELECTRICITY. (For explanation of symbols, see Note.)	Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
MARCH, 1938.					
Sunday	20		6.9	12.1	Little cloud till 8h., cloudy generally till 18h., little cloud by 19h. Cloudy, thin cloud from 22h. Hoar frost in morning.
Monday	21		7.4	12.2	Partially cloudy generally, clouding 14h. to very cloudy. Clearing 21h., cloudless by 22h.
Tuesday	22		6.1	12.2	Cloudless or nearly so till 5h., overcast by 6h. Cloud thinning 8h., partially cloudy from 10h., little cloud 13h. till 20h., overcast by 20h. Mist in morning and at night.
Wednesday	23	Discontinued.	3.8	12.3	Overcast till 10h., becoming cloudless by 11h. Fog till 11h., then misty. Fog again from 18h.
Thursday	24		7.4	12.4	Fog clearing at 2h., then overcast. Nearly cloudless 4h. till 8h., then thin cloud. Thickening 18h. to overcast by 19h. Hoar frost in morning. Solar halo about 11h. Slight rain 22h. till 23h.
Friday	25		0.0	12.5	Overcast till 19h., clearing to nearly cloudless by 20h. Occasional rain till 18h.
Saturday	26		7.2	12.5	Nearly cloudless till 8h., then partially cloudy. Very cloudy 13h. till 19h., then overcast. Slight rain 21h. till 22h. then rain.
No. of Column		25	Sum 38.8	Sum 86.2	27

The results apply to the Civil Day, or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.
Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.
The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "higher" and - "lower" than the average.
The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined.
The numbers in column 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine on each day.
The reading of the barometer decreased from 29.94 ins. at the beginning of the week to 29.61 ins. by 7h. on March 21st; increased to 29.99 ins. by 23h. on March 23rd; decreased to 29.62 ins. by 14h. on March 24th; increased to 29.86 ins. by 13h. on March 26th; decreased and was 29.77 ins. by midnight on the same day.

The results apply to the Civil Day, or from midnight to midnight, Greenwich Mean Time. The height of the column of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. The reading of the barometer decreased from 29.94 ins. at the beginning of the week to 29.61 ins. by 7h. on March 21st; increased to 29.99 ins. by 2.4h. on March 23rd; decreased to 29.62 ins. by 14h. on March 25th; increased to 29.86 ins. by 15h. on March 26th; decreased and was 29.77 ins. by midnight on the same day.

## CENSUS OF ENGLAND AND WALES, 1931

Census volumes in respect of the counties of England and Wales have now been published.

Parts I of the series, which are complete, relate to the areas as constituted at the date of the Census. Parts II will deal with the changes in boundary effected by County schemes under the Local Government Act of 1929, and will provide a limited range of statistics in respect of the newly constituted areas.

Sectional volumes presenting the results of the census of industries, occupations, etc. are also available, and particulars will be furnished on application.

## EXPLANATORY STATEMENT

TABLE I shows, for London and the County Boroughs and those urban districts with resident populations exceeding 50,000 at the last Census, the number of births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday. The births relate to those registered in the area, but include births occurring in municipal maternity hospitals situate outside the area to which they belong.

The deaths are exclusive of non-residents but corrected as far as possible by the inclusion of deaths of residents in other areas. The deaths in Edinburgh and Glasgow are fully corrected for non-residents; those in Dublin and Belfast are corrected by the exclusion of deaths of non-residents occurring in public institutions.

TABLE 2 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for the previous year.

TABLE 3 is a summary of cases of certain specified infectious diseases in England and Wales notifiable under the general law or under orders made by the Local Government Board or Minister of Health and is based upon weekly returns received from the Medical Officers of Health of all Local (and Port) Sanitary Authorities.

The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are *omitted* from this Summary.

TABLE 3A is similar to Table 3, but relates to the returns received too late for inclusion in Table 3 of the previous week. It includes revised figures for England and Wales as a whole for that week.

TABLE 4 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for the previous year.

TABLE 5 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 6 is a Report of the meteorological observations taken at Greenwich on each day of the week.

Summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, are published in the Registrar-General's Quarterly Return and the Statistical Review (Part I).

## NOTES FOR THE WEEK ENDED 2nd APRIL, 1938

### BIRTHS AND DEATHS.

In the 125 **County Boroughs and Great Towns** of England and Wales the live births registered in the thirteenth week of the year numbered 6,739 corresponding to an annual rate of 16.6 per 1,000 living: stillbirths numbered 290 corresponding to a rate of 41 per 1,000 total births registered (including stillborn): the deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 4,720 (273 less than in the preceding week).

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 59, against 67, 68 and 65 in the preceding three weeks.

In **London** (Administrative County including the City of London) there were 1,323 live births registered corresponding to an annual rate of 16.7 per 1,000 living: stillbirths number 42 corresponding to a rate of 31 per 1,000 total births (including stillborn): the deaths (excluding stillbirths) numbered 916 (75 less than in the preceding week): infant mortality, based on the average weekly number of live births during the last 52 weeks, was 52, against 63, 73 and 62 in the preceding three weeks.

Table 3.—Notifications of Infectious Diseases.

Number of cases notified in the week ended 2nd April, 1938, in Administrative Areas and Port Sanitary Districts with Summary for England and Wales.

*Note.*—Where no return has been received a \* is inserted in the columns. Totals shown against the names of Counties include any associated County Boroughs. The letters in the last column denote the following diseases:—A, Cholera; B, Plague; C, Puerperal fever (London A. C. only); D, Cerebro-spinal fever; E, Acute poliomyelitis; F, Acute polio-encephalitis; G, Acute encephalitis lethargica; H, Typhus fever; I, Relapsing fever; J, Continued fever (London A. C. only); L, Dysentery; M, Ophthalmia neonatorum; N, Puerperal pyrexia†.

† By virtue of the Public Health Act, 1936, in all areas outside London A. C., conditions notifiable as puerperal fever prior to the 1st October, 1937, are, from that date, notifiable as and included with notifications of puerperal pyrexia.

Summary.

	Small-pox.	Scarlet fever.	Diphtheria.	Enteric (typhoid and paratyphoid) fever.	Acute pneumonia (primary or influenzal).	Cholera.	Plague.	Puerperal fever. (London A. C. only).	Cerebro-spinal fever.	Acute poliomyelitis.	Acute polioencephalitis	Acute encephalitis lethargica.	Typhus fever.	Relapsing fever.	Continued fever. (London A. C. only).	Dysentery.	Ophthalmia neonatorum.	Puerperal pyrexia.†

\* The figures in this Table relate to the areas as constituted at the date of the weekly returns no corrections having been made for changes in boundary. The live births are derived from the weekly returns furnished by the Registrars and differ from those published for the towns in the Quarterly Return which are corrected for births occurring away from the usual residence of the parents.

† The figures for the Great Towns in the weekly columns relate to 125 Towns. The comparable totals for the years 1937 and 1938 in the last two columns, are in respect of 122 Towns.

The results apply to the Civil Day, or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer, is compared the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates *higher*, and - indicates *lower*, than the average.

The values given in column 10 are not corrected for the index error of the thermometer, which cannot be determined.

The numbers in column 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer decreased from 29.77 ins. at the beginning of the week to 29.70 ins. by 4h. on March 27th; increased generally to 30.20 ins. by 10h. on April 1st; decreased and was 29.66 ins. by midnight on 2nd.

## CENSUS OF ENGLAND AND WALES, 1931

Census volumes in respect of the counties of England and Wales have now been published.

Parts I of the series, which are complete, relate to the areas as constituted at the date of the Census. Parts II will deal with the changes in boundary effected by County schemes under the Local Government Act of 1929, and will provide a limited range of statistics in respect of the newly constituted areas.

Sectional volumes presenting the results of the census of industries, occupations, etc. are also available, and particulars will be furnished on application.

## EXPLANATORY STATEMENT

TABLE I shows, for London and the County Boroughs and those urban districts with resident populations exceeding 50,000 at the last Census, the number of births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday. The births relate to those registered in the area, but include births occurring in municipal maternity hospitals situate outside the area to which they belong.

The deaths are exclusive of non-residents but corrected as far as possible by the inclusion of deaths of residents in other areas. The deaths in Edinburgh and Glasgow are fully corrected for non-residents; those in Dublin and Belfast are corrected by the exclusion of deaths of non-residents occurring in public institutions.

TABLE 2 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for the previous year.

TABLE 3 is a summary of cases of certain specified infectious diseases in England and Wales notifiable under the general law or under orders made by the Local Government Board or Minister of Health and is based upon weekly returns received from the Medical Officers of Health of all Local (and Port) Sanitary Authorities.

The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are *omitted* from this Summary.

TABLE 3A is similar to Table 3, but relates to the returns received too late for inclusion in Table 3 of the previous week. It includes revised figures for England and Wales as a whole for that week.

TABLE 4 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for the previous year.

TABLE 5 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 6 is a Report of the meteorological observations taken at Greenwich on each day of the week.

Summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, are published in the Registrar-General's Quarterly Return and the Statistical Review (Part I).

## NOTES FOR THE WEEK ENDED 9th APRIL, 1938

### BIRTHS AND DEATHS.

In the 126 **County Boroughs and Great Towns** of England and Wales the live births registered in the fourteenth week of the year numbered 6,882 corresponding to an annual rate of 16.9 per 1,000 living: stillbirths numbered 285 corresponding to a rate of 40 per 1,000 total births registered (including stillborn): the deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 4,545 (174 less than in the preceding week).

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 59, against 68, 65 and 59 in the preceding three weeks.

In **London** (Administrative County including the City of London) there were 1,261 live births registered corresponding to an annual rate of 15.9 per 1,000 living: stillbirths number 44 corresponding to a rate of 34 per 1,000 total births (including stillborn): the deaths (excluding stillbirths) numbered 900 (16 less than in the preceding week): infant mortality, based on the average weekly number of live births during the last 52 weeks, was 53, against 73, 62 and 52 in the preceding three weeks.

Table 3.—Notifications of Infectious Diseases.

Number of cases notified in the week ended 9th April, 1938, in Administrative Areas and Port Sanitary Districts with Summary for England and Wales.

*Note.*—Where no return has been received a \* is inserted in the columns. Totals shown against the names of Counties include any associated County Boroughs. The letters in the last column denote the following diseases :—A, Cholera; B, Plague; C, Puerperal fever (London A. C. only); D, Cerebro-spinal fever; E, Acute poliomyelitis; F, Acute polio-encephalitis; G, Acute encephalitis lethargica; H, Typhus fever; I, Relapsing fever; J, Continued fever (London A. C. only); L, Dysentery; M, Ophthalmia neonatorum; N, Puerperal pyrexia†.

† By virtue of the Public Health Act, 1936, in all areas outside London A. C., conditions notifiable as puerperal fever prior to the 1st October, 1937, are, from that date, notifiable as and included with notifications of puerperal pyrexia.

## Summary.

		Small-pox.	Scarlet fever.	Diphtheria.	Enteric (typhoid and paratyphoid) fever.	Acute pneumonia (primary or influenzal).	Cholera.	Plague.	Puerperal fever. (London A. C. only).	Cerebro-spinal fever.	Acute poliomyelitis.	Acute polioencephalitis	Acute encephalitis lethargica.	Typhus fever.	Relapsing fever.	Continued fever. (London A. C. only).	Dysentery.	Ophthalmia neonatorum.	Puerperal pyrexia.†

\* The figures in this Table relate to the areas as constituted at the date of the weekly returns no corrections having been made for changes in boundary. The live births are derived from the weekly returns furnished by the Registrars and differ from those published for the towns in the Quarterly Return which are corrected for births occurring away from the usual residence of the parents.

† The figures for the Great Towns in the weekly columns relate to 125 Towns up to and including the week ended 2nd April and thereafter to 126 Towns. The comparable totals for the years 1937 and 1938 in the last two columns, are in respect of 122 Towns to the end of March and 124 Towns thereafter.

**Table 5.—Meteorology in certain Towns during the Week ended Saturday, 9th April, 1938.**

No. of Column		25	Sum 32.2	Sum 92.6	
			26	27	

The results apply to the Civil Day, or from midnight to midnight, Greenwich Mean Time. The height of the column of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.	Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deducted from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.	The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "higher" and - "lower" than the average.	The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined.	The numbers in column 16, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine on each day.	The reading of the barometer decreased from 29.66 ins. at the beginning of the week to 29.65 ins. by 14h. on April 5th; increased to 30.28 ins. by 7h. on April 4th; decreased to 30.02 ins. by 17h. on April 5th; increased generally to 30.43 ins. by midnight on April 9th.
--	---	--	---	--	--

The results apply to the Civil Day, or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "higher" and - "lower" than the average.

The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined.

The numbers in column 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer decreased from 29.66 ins. at the beginning of the week to 29.65 ins. by 1½h. on April 3rd; increased to 30.28 ins. by 7h. on April 4th; decreased to 30.02 ins. by 17h. on April 5th; increased generally to 30.43 ins. by midnight on April 9th.

Discontinued.

## CENSUS OF ENGLAND AND WALES, 1931

Census volumes in respect of the counties of England and Wales have now been published.

Parts I of the series, which are complete, relate to the areas as constituted at the date of the Census. Parts II will deal with the changes in boundary effected by County schemes under the Local Government Act of 1929, and will provide a limited range of statistics in respect of the newly constituted areas.

Sectional volumes presenting the results of the census of industries, occupations, etc. are also available, and particulars will be furnished on application.

## EXPLANATORY STATEMENT

TABLE 1 shows, for London and the County Boroughs and those urban districts with resident populations exceeding 50,000 at the last Census, the number of births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday. The births relate to those registered in the area, but include births occurring in municipal maternity hospitals situate outside the area to which they belong.

The deaths are exclusive of non-residents but corrected as far as possible by the inclusion of deaths of residents in other areas. The deaths in Edinburgh and Glasgow are fully corrected for non-residents; those in Dublin and Belfast are corrected by the exclusion of deaths of non-residents occurring in public institutions.

TABLE 2 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for the previous year.

TABLE 3 is a summary of cases of certain specified infectious diseases in England and Wales notifiable under the general law or under orders made by the Local Government Board or Minister of Health and is based upon weekly returns received from the Medical Officers of Health of all Local (and Port) Sanitary Authorities.

The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are *omitted* from this Summary.

TABLE 3A is similar to Table 3, but relates to the returns received too late for inclusion in Table 3 of the previous week. It includes revised figures for England and Wales as a whole for that week.

TABLE 4 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for the previous year.

TABLE 5 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 6 is a Report of the meteorological observations taken at Greenwich on each day of the week.

Summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, are published in the Registrar-General's Quarterly Return and the Statistical Review (Part I).

## NOTES FOR THE WEEK ENDED 16th APRIL, 1938

### BIRTHS AND DEATHS.

In the 126 **County Boroughs and Great Towns** of England and Wales the live births registered in the fifteenth week of the year numbered 5,919 corresponding to an annual rate of 14.6 per 1,000 living: stillbirths numbered 258 corresponding to a rate of 4.2 per 1,000 total births registered (including stillborn): the deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 4,680 (135 more than in the preceding week).

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 62, against 65, 59 and 59 in the preceding three weeks.

In **London** (Administrative County including the City of London) there were 1,030 live births registered corresponding to an annual rate of 13.0 per 1,000 living: stillbirths number 51 corresponding to a rate of 4.7 per 1,000 total births (including stillborn): the deaths (excluding stillbirths) numbered 848 (52 less than in the preceding week): infant mortality, based on the average weekly number of live births during the last 52 weeks, was 51, against 62, 52 and 53 in the preceding three weeks.

**Table 3.—Notifications of Infectious Diseases.**

**Number of cases notified in the week ended 16th April, 1938, in Administrative Areas and Port Sanitary Districts with Summary for England and Wales.**

*Note.*—Where no return has been received a \* is inserted in the columns. Totals shown against the names of Counties include any associated County Boroughs. The letters in the last column denote the following diseases:—A, Cholera; B, Plague; C, Puerperal fever (London A. C. only); D, Cerebro-spinal fever; E, Acute poliomyelitis; F, Acute polio-encephalitis; G, Acute encephalitis lethargica; H, Typhus fever; I, Relapsing fever; J, Continued fever (London A. C. only); L, Dysentery; M, Ophthalmia neonatorum; N, Puerperal pyrexia†.

† By virtue of the Public Health Act, 1936, in all areas outside London A. C., conditions notifiable as puerperal fever prior to the 1st October, 1937, are, from that date, notifiable as and included with notifications of puerperal pyrexia.

**Summary.**

	Small-pox.	Scarlet fever.	Diphtheria.	Enteric (typhoid and paratyphoid) fever.	Acute pneumonia (primary or influenzal).	Cholera.	Plague.	Puerperal fever. (London A. C. only).	Cerebro-spinal fever.	Acute poliomyelitis.	Acute polioencephalitis	Acute encephalitis lethargica.	Typhus fever.	Relapsing fever.	Continued fever. (London A. C. only).	Dysentery.	Ophthalmia neonatorum.	Puerperal pyrexia.†

\* The figures in this Table relate to the areas as constituted at the date of the weekly returns no corrections having been made for changes in boundary. The live births are derived from the weekly returns furnished by the Registrars and differ from those published for the towns in the Quarterly Return which are corrected for births occurring away from the usual residence of the parents.

† The figures for the Great Towns in the weekly columns relate to 125 Towns up to and including the week ended 2nd April and thereafter to 126 Towns. The comparable totals for the years 1937 and 1938 in the last two columns, are in respect of 122 Towns to the end of March and 124 Towns thereafter.

Table 5.—Meteorology in certain Towns during the Week ended Saturday, 16th April, 1938.

Saturday	16		4.6	13.9	Little cloud till 9h., then overcast. Cloudy 14h. till 17h., few clouds till 21h., overcast by 21½h. Hoar frost in morning.	
No. of Column		25	Sum 46.3	Sum 95.7		27

The results apply to the Civil Day, or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records, made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1903, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending, 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "higher" and - "lower" than the average.

The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined.

The numbers in column 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine on each day.

The reading of the barometer increased from 30.43 ins. at the beginning of the week to 30.59 ins. by 9h. on April 11th; decreased generally to 30.06 ins. by 17h. on April 16th; increased and was 30.16 ins. by midnight on the same day.

The results apply to the Civil Day, or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "higher" and - "lower" than the average.

The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined.

The numbers in column 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer increased from 30.43 ins. at the beginning of the week to 30.59 ins. by 9h. on April 11th; decreased generally to 30.06 ins. by 17h. on April 16th; increased and was 30.16 ins. by midnight on the same day.

## CENSUS OF ENGLAND AND WALES, 1931

Census volumes in respect of the counties of England and Wales have now been published.

Parts I of the series, which are complete, relate to the areas as constituted at the date of the Census. Parts II will deal with the changes in boundary effected by County schemes under the Local Government Act of 1929, and will provide a limited range of statistics in respect of the newly constituted areas.

Sectional volumes presenting the results of the census of industries, occupations, etc. are also available, and particulars will be furnished on application.

# BETTER HEALTH

Whitefriars House, 68, Fleet Street, London, E.C.4.

The Official Journal of the Central Council for Health Education. It is intended to carry simple, non-technical and accurate teaching on the prevention of disease into the homes of the people. With the assistance of upwards of 150 health departments, the circulation has now reached 300,000 copies per month.

Quantities are supplied at special prices for local distribution. Write for specimen copy and particulars.

## A Clinical and Genetic Study of 1,280 Cases of Mental Defect

MEDICAL RESEARCH COUNCIL  
SPECIAL REPORT No. 229

Material likely to determine the general course in research in Mental Deficiency in this country for some years to come is contained in this new Report. The work is based on the researches undertaken since 1930, which involve a close clinical and genetical study of a representative group of 1,280 patients of all grades and types of mental deficiency. The cases studied were carefully graded and subsequently classified by clinical diagnosis. The Council states that the researches constitute a new and refreshing approach to the old and much discussed problem of the relative rôles of heredity and environment in the development of the human race. That the problem with which they deal is one of urgency is apparent from the fact that it is estimated that there are some 300,000 mental defectives in England and Wales alone.

## EXPLANATORY STATEMENT

TABLE I shows, for London and the County Boroughs and those urban districts with resident populations exceeding 50,000 at the last Census, the number of births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday. The births relate to those registered in the area, but include births occurring in municipal maternity hospitals situate outside the area to which they belong.

The deaths are exclusive of non-residents but corrected as far as possible by the inclusion of deaths of residents in other areas. The deaths in Edinburgh and Glasgow are fully corrected for non-residents; those in Dublin and Belfast are corrected by the exclusion of deaths of non-residents occurring in public institutions.

TABLE 2 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for the previous year.

TABLE 3 is a summary of cases of certain specified infectious diseases in England and Wales notifiable under the general law or under orders made by the Local Government Board or Minister of Health and is based upon weekly returns received from the Medical Officers of Health of all Local (and Port) Sanitary Authorities.

The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are *omitted* from this Summary.

TABLE 3A is similar to Table 3, but relates to the returns received too late for inclusion in Table 3 of the previous week. It includes revised figures for England and Wales as a whole for that week.

TABLE 4 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for the previous year.

TABLE 5 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 6 is a Report of the meteorological observations taken at Greenwich on each day of the week.

Summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, are published in the Registrar-General's Quarterly Return and the Statistical Review (Part I).

## NOTES FOR THE WEEK ENDED 23rd APRIL, 1938

### BIRTHS AND DEATHS.

In the 126 County Boroughs and Great Towns of England and Wales the live births registered in the sixteenth week of the year numbered 6,672 corresponding to an annual rate of 16.4 per 1,000 living: stillbirths numbered 268 corresponding to a rate of 39 per 1,000 total births registered (including stillborn): the deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 4,930 (249 more than in the preceding week).

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 64, against 59, 59 and 62 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,303 live births registered corresponding to an annual rate of 16.4 per 1,000 living: stillbirths number 46 corresponding to a rate of 34 per 1,000 total births (including stillborn): the deaths (excluding stillbirths) numbered 945 (97 more than in the preceding week): infant mortality, based on the average weekly number of live births during the last 52 weeks, was 55, against 52, 53 and 51 in the preceding three weeks.

Paratyphoid) fever.						

The numbers of "expected" notifications shown in the above table are based on the Median Value of the corresponding weeks of 1929-37.

### MONTHLY STATEMENT OF DEATHS FROM SMALL-POX IN ENGLAND AND WALES

Small-pox was mentioned as a cause of death in one case in the returns received from areas outside Greater London, the County Boroughs and Great Towns for the month of March last. This death has been provisionally classified to small-pox and assigned to Gravesend M.B. (Kent) the deceased having been admitted to the Port of London Hospital on his arrival from abroad.

Table 1.—126 County Boroughs and Great Towns, Greater London, and Four Scottish and Irish Towns.

**Table 3.—Notifications of Infectious Diseases.**

**Number of cases notified in the week ended 23rd April, 1938, in Administrative Areas and Port Health Districts† with Summary for England and Wales**

*Note.*—Where no return has been received a \* is inserted in the columns. Totals shown against the names of Counties include any associated County Boroughs. The letters in the last column denote the following diseases :—A, Cholera; B, Plague; C, Puerperal fever (London A. C. only); D, Cerebro-spinal fever; E, Acute poliomyelitis; F, Acute poli-encephalitis; G, Acute encephalitis lethargica; H, Typhus fever; I, Relapsing fever; J, Continued fever (London A. C. only); L, Dysentery; M, Ophthalmia neonatorum; N, Puerperal pyrexia†.

† By virtue of the Public Health Act, 1936, in all areas outside London A. C., conditions notifiable as puerperal fever prior to the 1st October, 1937, are, from that date, notifiable as and included with notifications of puerperal pyrexia.

**Summary.**

		Small-pox.	Scarlet fever.	Diphtheria.	Enteric (typhoid and paratyphoid) fever.	Acute pneumonia (primary or influenzal).	Cholera.	Plague.	Puerperal fever. (London A. C. only).	Cerebro-spinal fever.	Acute poliomyelitis.	Acute poli-encephalitis	Acute encephalitis lethargica.	Typhus fever.	Relapsing fever.	Continued fever. (London A. C. only).	Dysentery.	Ophthalmia neonatorum.	Puerperal pyrexia.†

\* The figures in this Table relate to the areas as constituted at the date of the weekly returns no corrections having been made for changes in boundary. The live births are derived from the weekly returns furnished by the Registrars and differ from those published for the towns in the Quarterly Return which are corrected for births occurring away from the usual residence of the parents.

† The figures for the Great Towns in the weekly columns relate to 125 Towns up to and including the week ended 2nd April and thereafter to 126 Towns. The comparable totals for the years 1937 and 1938 in the last two columns, are in respect of 122 Towns to the end of March and 124 Towns thereafter.

**Table 5.—Meteorology in certain Towns during the Week ended Saturday, 23rd April, 1938.**

## CENSUS OF ENGLAND AND WALES, 1931

Census volumes in respect of the counties of England and Wales have now been published.

Parts I of the series, which are complete, relate to the areas as constituted at the date of the Census. Parts II will deal with the changes in boundary effected by County schemes under the Local Government Act of 1929, and will provide a limited range of statistics in respect of the newly constituted areas.

Sectional volumes presenting the results of the census of industries, occupations, etc. are also available, and particulars will be furnished on application.

# A Clinical and Genetic Study of 1,280 Cases of Mental Defect

MEDICAL RESEARCH COUNCIL

SPECIAL REPORT No. 229

Material likely to determine the general course in research in Mental Deficiency in this country for some years to come is contained in this new Report. The work is based on the researches undertaken since 1930, which involve a close clinical and genetical study of a representative group of 1,280 patients of all grades and types of mental deficiency. The cases studied were carefully graded and subsequently classified by clinical diagnosis. The Council states that the researches constitute a new and refreshing approach to the old and much discussed problem of the relative rôles of heredity and environment in the development of the human race. That the problem with which they deal is one of urgency is apparent from the fact that it is estimated that there are some 300,000 mental defectives in England and Wales alone.

## EXPLANATORY STATEMENT

TABLE I shows, for London and the County Boroughs and those urban districts with resident populations exceeding 50,000 at the last Census, the number of births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday. The births relate to those registered in the area, but include births occurring in municipal maternity hospitals situate outside the area to which they belong.

The deaths are exclusive of non-residents but corrected as far as possible by the inclusion of deaths of residents in other areas. The deaths in Edinburgh and Glasgow are fully corrected for non-residents; those in Dublin and Belfast are corrected by the exclusion of deaths of non-residents occurring in public institutions.

TABLE 2 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for the previous year.

TABLE 3 is a summary of cases of certain specified infectious diseases in England and Wales notifiable under the general law or under orders made by the Local Government Board or Minister of Health and is based upon weekly returns received from the Medical Officers of Health of all Local (and Port) Sanitary Authorities.

The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are *omitted* from this Summary.

TABLE 3A is similar to Table 3, but relates to the returns received too late for inclusion in Table 3 of the previous week. It includes revised figures for England and Wales as a whole for that week.

TABLE 4 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for the previous year.

TABLE 5 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 6 is a Report of the meteorological observations taken at Greenwich on each day of the week.

Summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, are published in the Registrar-General's Quarterly Return and the Statistical Review (Part I).

## NOTES FOR THE WEEK ENDED 30th APRIL, 1938

### BIRTHS AND DEATHS.

In the 126 County Boroughs and Great Towns of England and Wales the live births registered in the seventeenth week of the year numbered 7,333 corresponding to an annual rate of 18.0 per 1,000 living: stillbirths numbered 300 corresponding to a rate of 39 per 1,000 total births registered (including stillborn): the deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 4,874 (58 less than in the preceding week).

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 56, against 59, 62 and 64 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,284 live births registered corresponding to an annual rate of 16.2 per 1,000 living: stillbirths number 40 corresponding to a rate of 30 per 1,000 total births (including stillborn): the deaths (excluding stillbirths) numbered 884 (61 less than in the preceding week): infant mortality, based on the average weekly number of live births during the last 52 weeks, was 39, against 53, 51 and 55 in the preceding three weeks.

Table 3.—Notifications of Infectious Diseases.

Number of cases notified in the week ended 30th April, 1938, in Administrative Areas and Port Health Districts with Summary for England and Wales.

*Note.*—Where no return has been received a \* is inserted in the columns. Totals shown against the names of Counties include any associated County Boroughs. The letters in the last column denote the following diseases:—A, Cholera; B, Plague; C, Puerperal fever (London A. C. only); D, Cerebro-spinal fever; E, Acute poliomyelitis; F, Acute poliomyelitis; G, Acute encephalitis lethargica; H, Typhus fever; I, Relapsing fever; J, Continued fever (London A. C. only); L, Dysentery; M, Ophthalmia neonatorum; N, Puerperal pyrexia†.

† By virtue of the Public Health Act, 1936, in all areas outside London A. C., conditions notifiable as puerperal fever prior to the 1st October, 1937, are, from that date, notifiable as and included with notifications of puerperal pyrexia.

Summary.

		Small-pox.	Scarlet fever.	Diphtheria.	Enteric (typhoid and paratyphoid) fever.	Acute pneumonia (primary or influenzal).	Cholera.	Plague.	Puerperal fever. (London A. C. only).	Cerebro-spinal fever.	Acute poliomyelitis.	Acute poliomyelitis.	Acute encephalitis lethargica.	Typhus fever.	Relapsing fever.	Continued fever. (London A. C. only).	Dysentery.	Ophthalmia neonatorum.	Puerperal pyrexia.†

\* The figures in this Table relate to the areas as constituted at the date of the weekly returns no corrections having been made for changes in boundary. The live births are derived from the weekly returns furnished by the Registrars and differ from those published for the towns in the Quarterly Return which are corrected for births occurring away from the usual residence of the parents.

† The figures for the Great Towns in the weekly columns relate to 125 Towns up to and including the week ended 2nd April and thereafter to 126 Towns. The comparable totals for the years 1937 and 1938 in the last two columns, are in respect of 122 Towns to the end of March and 124 Towns thereafter.

**Table 5.—Meteorology in certain Towns during the Week ended Saturday, 30th April, 1938.**

The results apply to the Civil Day, or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1903, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "higher" and - "lower" than the average.

The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined.

The numbers in column 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer increased from 29.97 ins. at the beginning of the week to 30.03 ins. by 21h. on April 24th; decreased to 29.88 ins. by 17h. on April 27th; increased to 30.00 ins. by 23h. on April 28th; decreased to 29.74 ins. by 4h. on April 30th; increased to 29.83 ins. by 9h. on same day; decreased and was 29.77 ins. by midnight on April 30th.

## CENSUS OF ENGLAND AND WALES, 1931

Census volumes in respect of the counties of England and Wales have now been published.

Parts I of the series, which are complete, relate to the areas as constituted at the date of the Census. Parts II will deal with the changes in boundary effected by County schemes under the Local Government Act of 1929, and will provide a limited range of statistics in respect of the newly constituted areas.

Sectional volumes presenting the results of the census of industries, occupations, etc. are also available, and particulars will be furnished on application.

## EXPLANATORY STATEMENT

TABLE I shows, for London and the County Boroughs and those urban districts with resident populations exceeding 50,000 at the last Census, the number of births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday. The births relate to those registered in the area, but include births occurring in municipal maternity hospitals situate outside the area to which they belong.

The deaths are exclusive of non-residents but corrected as far as possible by the inclusion of deaths of residents in other areas. The deaths in Edinburgh and Glasgow are fully corrected for non-residents; those in Dublin and Belfast are corrected by the exclusion of deaths of non-residents occurring in public institutions.

TABLE 2 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for the previous year.

TABLE 3 is a summary of cases of certain specified infectious diseases in England and Wales notifiable under the general law or under orders made by the Local Government Board or Minister of Health and is based upon weekly returns received from the Medical Officers of Health of all Local (and Port) Sanitary Authorities.

The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are *omitted* from this Summary.

TABLE 3A is similar to Table 3, but relates to the returns received too late for inclusion in Table 3 of the previous week. It includes revised figures for England and Wales as a whole for that week.

TABLE 4 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for the previous year.

TABLE 5 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 6 is a Report of the meteorological observations taken at Greenwich on each day of the week.

Summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, are published in the Registrar-General's Quarterly Return and the Statistical Review (Part I).

## NOTES FOR THE WEEK ENDED 7th MAY, 1938

### BIRTHS AND DEATHS.

In the 126 County Boroughs and Great Towns of England and Wales the live births registered in the eighteenth week of the year numbered 7,276 corresponding to an annual rate of 17.9 per 1,000 living: stillbirths numbered 340 corresponding to a rate of 45 per 1,000 total births registered (including stillborn): the deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 4,943 (68 more than in the preceding week).

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 55, against 62, 64 and 56 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,403 live births registered corresponding to an annual rate of 17.7 per 1,000 living: stillbirths number 66 corresponding to a rate of 45 per 1,000 total births (including stillborn): the deaths (excluding stillbirths) numbered 936 (52 more than in the preceding week): infant mortality, based on the average weekly number of live births during the last 52 weeks, was 39, against 51, 55 and 39 in the preceding three weeks.

## CORRIGENDA.

RETURN FOR WEEK ENDED 30TH APRIL, 1938.

*Notifications of Infectious Diseases—England and Wales.*

Acute pneumonia (primary or influenzal)—for number of Actual Notifications *read* 1270 instead of 1370 and for percentage of expected cases *read* 134 instead of 144.

(49636)

**Table 3.—Notifications of Infectious Diseases.**

**Number of cases notified in the week ended 7th May, 1938, in Administrative Areas and Port Health Districts with Summary for England and Wales.**

*Note.*—Where no return has been received a \* is inserted in the columns. Totals shown against the names of Counties include any associated County Boroughs. The letters in the last column denote the following diseases :—A, Cholera ; B, Plague ; C, Puerperal fever (London A. C. only) ; D, Cerebro-spinal fever ; E, Acute poliomyelitis ; F, Acute poli-encephalitis ; G, Acute encephalitis lethargica ; H, Typhus fever ; I, Relapsing fever ; J, Continued fever (London A. C. only) ; L, Dysentery ; M, Ophthalmia neonatorum ; N, Puerperal pyrexia†.

† By virtue of the Public Health Act, 1936, in all areas outside London A. C., conditions notifiable as puerperal fever prior to the 1st October, 1937, are, from that date, notifiable as and included with notifications of puerperal pyrexia.

**Summary.**

	Small-pox.	Scarlet fever.	Diphtheria.	Enteric (typhoid and paratyphoid) fever.	Acute pneumonia (primary or influenzal).	Cholera.	Plague.	Puerperal fever. (London A. C. only).	Cerebro-spinal fever.	Acute poliomyelitis.	Acute poli-encephalitis.	Acute encephalitis lethargica.	Typhus fever.	Relapsing fever.	Continued fever. (London A. C. only).	Dysentery.	Ophthalmia neonatorum.	Puerperal pyrexia.†

\* The figures in this Table relate to the areas as constituted at the date of the weekly returns no corrections having been made for changes in boundary. The live births are derived from the weekly returns furnished by the Registrars and differ from those published for the towns in the Quarterly Return which are corrected for births occurring away from the usual residence of the parents.

† The figures for the Great Towns in the weekly columns relate to 125 Towns up to and including the week ended 2nd April and thereafter to 126 Towns. The comparable totals for the years 1937 and 1938 in the last two columns, are in respect of 122 Towns to the end of March and 124 Towns thereafter.

**Table 5.—Meteorology in certain Towns during the Week ended Saturday, 7th May, 1938.**

			26	27	

The results apply to the Civil Day, or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "higher," and - "lower" than the average.

The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined. The numbers in column 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day. The reading of the barometer decreased from 29.77 ins. at the beginning of the week to 29.73 ins. by 5h. on May 2nd; increased to 29.93 ins. by 23h. on May 5th; decreased to 29.81 ins. by 3h. on May 7th; increased and was 30.01 ins. by midnight on the same day.

## CENSUS OF ENGLAND AND WALES, 1931

Census volumes in respect of the counties of England and Wales have now been published.

Parts I of the series, which are complete, relate to the areas as constituted at the date of the Census. Parts II will deal with the changes in boundary effected by County schemes under the Local Government Act of 1929, and will provide a limited range of statistics in respect of the newly constituted areas.

Sectional volumes presenting the results of the census of industries, occupations, etc. are also available, and particulars will be furnished on application.

## EXPLANATORY STATEMENT

TABLE I shows, for London and the County Boroughs and those urban districts with resident populations exceeding 50,000 at the last Census, the number of births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday. The births relate to those registered in the area, but include births occurring in municipal maternity hospitals situate outside the area to which they belong.

The deaths are exclusive of non-residents but corrected as far as possible by the inclusion of deaths of residents in other areas. The deaths in Edinburgh and Glasgow are fully corrected for non-residents; those in Dublin and Belfast are corrected by the exclusion of deaths of non-residents occurring in public institutions.

TABLE 2 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for the previous year.

TABLE 3 is a summary of cases of certain specified infectious diseases in England and Wales notifiable under the general law or under orders made by the Local Government Board or Minister of Health and is based upon weekly returns received from the Medical Officers of Health of all Local (and Port) Sanitary Authorities.

The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are *omitted* from this Summary.

TABLE 3A is similar to Table 3, but relates to the returns received too late for inclusion in Table 3 of the previous week. It includes revised figures for England and Wales as a whole for that week.

TABLE 4 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for the previous year.

TABLE 5 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 6 is a Report of the meteorological observations taken at Greenwich on each day of the week.

Summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, are published in the Registrar-General's Quarterly Return and the Statistical Review (Part I).

## NOTES FOR THE WEEK ENDED 14th MAY, 1938

### BIRTHS AND DEATHS.

In the 126 **County Boroughs and Great Towns** of England and Wales the live births registered in the nineteenth week of the year numbered 7,129 corresponding to an annual rate of 17.5 per 1,000 living: stillbirths numbered 309 corresponding to a rate of 42 per 1,000 total births registered (including stillborn): the deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 5,119 (176 more than in the preceding week).

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 64 against 64, 56 and 55 in the preceding three weeks.

In **London** (Administrative County including the City of London) there were 1,379 live births registered corresponding to an annual rate of 17.6 per 1,000 living stillbirths number 39 corresponding to a rate of 28 per 1,000 total births (including stillborn): the deaths (excluding stillbirths) numbered 1,005 (69 more than in the preceding week): infant mortality, based on the average weekly number of live births during the last 52 weeks, was 59, against 55, 39 and 39 in the preceding three weeks.

**Table 3.—Notifications of Infectious Diseases.**

**Number of cases notified in the week ended 14th May, 1938, in Administrative Areas and Port Health Districts with Summary for England and Wales.**

*Note.*—Where no return has been received a \* is inserted in the columns. Totals shown against the names of Counties include any associated County Boroughs. The letters in the last column denote the following diseases:—A, Cholera; B, Plague; C, Puerperal fever (London A. C. only); D, Cerebro-spinal fever; E, Acute poliomyelitis; F, Acute poliomyelitis; G, Acute encephalitis lethargica; H, Typhus fever; I, Relapsing fever; J, Continued fever (London A. C. only); L, Dysentery; M, Ophthalmia neonatorum; N, Puerperal pyrexia†.

† By virtue of the Public Health Act, 1936, in all areas outside London A. C., conditions notifiable as puerperal fever prior to the 1st October, 1937, are, from that date, notifiable as and included with notifications of puerperal pyrexia.

**Summary.**

	Small-pox.	Scarlet fever.	Diphtheria.	Enteric (typhoid and paratyphoid) fever.	Acute pneumonia (primary or influenzal).	Cholera.	Plague.	Puerperal fever. (London A. C. only).	Cerebro-spinal fever.	Acute poliomyelitis.	Acute poliomyelitis.	Acute encephalitis lethargica.	Typhus fever.	Relapsing fever.	Continued fever. (London A. C. only).	Dysentery.	Ophthalmia neonatorum.	Puerperal pyrexia.†

\* The figures in this Table relate to the areas as constituted at the date of the weekly returns no corrections having been made for changes in boundary. The live births are derived from the weekly returns furnished by the Registrars and differ from those published for the towns in the Quarterly Return which are corrected for births occurring away from the usual residence of the parents.

† The figures for the Great Towns in the weekly columns relate to 125 Towns up to and including the week ended 2nd April and thereafter to 126 Towns. The comparable totals for the years 1937 and 1938 in the last two columns, are in respect of 122 Towns to the end of March and 124 Towns thereafter.

DATE.		ATMOSPHERIC ELECTRICITY. (For explanation of symbols, see Note.)	Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
MAY, 1938.					
Sunday	8		9.9	15.2	Cloudless till 8h., little cloud till 10h., then cloudy. Clearing from 18h. to cloudless by 19h. Hear frost in morning.
Monday	9		2.8	15.3	Cloudless till 3h., cloudy generally by 4h. Nearly overcast from 12½h. till 22h., becoming few clouds by 23h.
Tuesday	10		4.0	15.3	Little cloud till 9h., becoming overcast or nearly so by 10½h. Slight haze during day.
Wednesday	11	Discontinued.	10.2	15.4	Overcast till 8h., few clouds by 9½h. Cloudless from 20h. Bright aurora 23½h. till 0½h.
Thursday	12		11.1	15.4	Cloudless till 7h., then few clouds. Clouding from 16h. to overcast by 18h. Slight rain about 20h. and 21h.
Friday	13		0.8	15.5	Overcast or nearly so.
Saturday	14		3.9	15.5	Overcast or nearly so. Slight rain 16h. till 19h., then rain till 20½h.
No. of Column		25	Sum 42.7	Sum 107.6	27

The results apply to the Civil Day, or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 132 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1904, and that for horizontal movement of the air from a discussion of the anemometric records for the 30 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "higher" and - "lower" than the average.

The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined.

The numbers in column 25, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day. The reading of the barometer increased from 30.01 ins. at the beginning of the week to 30.06 ins. by 8h. on May 8th; decreased to 29.92 ins. by 18h. on May 9th; increased to 30.11 ins. by 10h. on May 11th; decreased to 29.54 ins. by 18h. on May 14th; increased and was 29.56 ins. by midnight on the same day.

# THE MEDICAL OFFICER

A Journal for Medical Men in the  
Government and Municipal Services.

## EPIDEMICS IN SCHOOLS

### MEDICAL RESEARCH COUNCIL

### SPECIAL REPORT No. 227

School communities offer somewhat special facilities for the investigation of epidemic and other illnesses and during the last seven years a Committee appointed by the Medical Research Council has been investigating the subject from both scientific and practical standpoints.

Although the Committee responsible for the report declare that their investigations throw no light on the question of why an epidemic spreads, nor on the factors favouring limitation of an outbreak, their careful study based on data collected over five years throws a great deal of light on the problem of school infections generally. It shows the present position in schools by means of a detailed statistical analysis (illustrating for example the often marked differences between the health record in schools for boys and for girls) and points to the important problems still unsolved and indicates how they may best be tackled.

## EXPLANATORY STATEMENT

TABLE I shows, for London and the County Boroughs and those urban districts with resident populations exceeding 50,000 at the last Census, the number of births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday. The births relate to those registered in the area, but include births occurring in municipal maternity hospitals situate outside the area to which they belong.

The deaths are exclusive of non-residents but corrected as far as possible by the inclusion of deaths of residents in other areas. The deaths in Edinburgh and Glasgow are fully corrected for non-residents; those in Dublin and Belfast are corrected by the exclusion of deaths of non-residents occurring in public institutions.

TABLE 2 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for the previous year.

TABLE 3 is a summary of cases of certain specified infectious diseases in England and Wales notifiable under the general law or under orders made by the Local Government Board or Minister of Health and is based upon weekly returns received from the Medical Officers of Health of all Local (and Port) Sanitary Authorities.

The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

TABLE 3A is similar to Table 3, but relates to the returns received too late for inclusion in Table 3 of the previous week. It includes revised figures for England and Wales as a whole for that week.

TABLE 4 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for the previous year.

TABLE 5 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 6 is a Report of the meteorological observations taken at Greenwich on each day of the week.

Summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, are published in the Registrar-General's Quarterly Return and the Statistical Review (Part I).

## NOTES FOR THE WEEK ENDED 21st MAY, 1938

### BIRTHS AND DEATHS.

In the 126 County Boroughs and Great Towns of England and Wales the live births registered in the twentieth week of the year numbered 6,889 corresponding to an annual rate of 16.9 per 1,000 living: stillbirths numbered 305 corresponding to a rate of 42 per 1,000 total births registered (including stillborn): the deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 4,677 (441 less than in the preceding week).

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 53 against 56, 55 and 64 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,299 live births registered corresponding to an annual rate of 16.5 per 1,000 living: stillbirths number 41 corresponding to a rate of 31 per 1,000 total births (including stillborn): the deaths (excluding stillbirths) numbered 911 (94 less than in the preceding week): infant mortality, based on the average weekly number of live births during the last 52 weeks, was 43, against 39, 39 and 59 in the preceding three weeks.

Table 3.—Notifications of Infectious Diseases.

Number of cases notified in the week ended 21st May, 1938, in Administrative Areas and Port Health Districts with Summary for England and Wales.

*Note.*—Where no return has been received a \* is inserted in the columns. Totals shown against the names of Counties include any associated County Boroughs. The letters in the last column denote the following diseases :—A, Cholera; B, Plague; C, Puerperal fever (London A. C. only); D, Cerebro-spinal fever; E, Acute poliomyelitis; F, Acute polio-encephalitis; G, Acute encephalitis lethargica; H, Typhus fever; I, Relapsing fever; J, Continued fever (London A. C. only); L, Dysentery; M, Ophthalmia neonatorum; N, Puerperal pyrexia†.

† By virtue of the Public Health Act, 1936, in all areas outside London A. C., conditions notifiable as puerperal fever prior to the 1st October, 1937, are, from that date, notifiable as and included with notifications of puerperal pyrexia.

## Summary.

	Small-pox.	Scarlet fever.	Diphtheria.	Enteric (typhoid and paratyphoid) fever.	Acute pneumonia (primary or influenzal).	Cholera.	Plague.	Puerperal fever. (London A. C. only).	Cerebro-spinal fever.	Acute poliomyelitis.	Acute polioencephalitis.	Acute encephalitis lethargica.	Typhus fever.	Relapsing fever.	Continued fever. (London A. C. only).	Dysentery.	Ophthalmia neonatorum.	Puerperal pyrexia.†

\* The figures in this Table relate to the areas as constituted at the date of the weekly returns no corrections having been made for changes in boundary. The live births are derived from the weekly returns furnished by the Registrars and differ from those published for the towns in the Quarterly Return which are corrected for births occurring away from the usual residence of the parents.

† The figures for the Great Towns in the weekly columns relate to 125 Towns up to and including the week ended 2nd April and thereafter to 126 Towns. The comparable totals for the years 1937 and 1938 in the last two columns, are in respect of 122 Towns to the end of March and 124 Towns thereafter.

DATE.	ATMOSPHERIC ELECTRICITY. (For explanation of symbols, see Note.)	Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.	
MAY, 1938.					
Sunday ... 15		9.0	15.6	Overcast, clearing from 6h. Very cloudy generally 6 $\frac{1}{2}$ h. till 17 $\frac{1}{2}$ h., then variably cloudy. Shower 0 $\frac{1}{2}$ h.; intermittent rain 1h. to 4h.	<p>The results apply to the Civil Day, or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 132 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.</p> <p>Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean readings of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.</p> <p>The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "higher," and - "lower," than the average.</p> <p>The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined.</p> <p>The numbers in column 16 derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of <i>bright</i> sunshine on each day.</p> <p>The reading of the barometer increased from 29.56 ins. at the beginning of the week to 29.79 ins. by 22h. on 16th; decreased to 29.57 ins. by 13h. on 18th; increased and was 30.13 ins. by midnight on the 21st.</p>
Monday ... 16		1.4	15.6	Variably cloudy till 4h., then overcast. Very cloudy from 15 $\frac{1}{2}$ h., clearing 18h. to few clouds by 19h. Clouding from 23 $\frac{1}{2}$ h.	
Tuesday ... 17		0.0	15.7	Nearly overcast till 4h., then overcast. R in or slight rain 8 $\frac{1}{2}$ h. till 16h., and 18 $\frac{1}{2}$ h. till 19 $\frac{1}{2}$ h.	
Wednesday ... 18	Discontinued.	1.3	15.7	Overcast or nearly so till 12h., then overcast. Shower at 1 $\frac{1}{2}$ h., slight showers at 13 $\frac{1}{2}$ h. and 16 $\frac{1}{2}$ h. Rain or slight rain 18 $\frac{1}{2}$ h. till 23 $\frac{1}{2}$ h.	
Thursday ... 19		3.2	15.8	Overcast till 7h., then very cloudy generally.	
Friday ... 20		6.7	15.8	Variably cloudy till 4 $\frac{1}{2}$ h., nearly overcast till 9 $\frac{1}{2}$ h., then cloudy generally. Clearing 19 $\frac{1}{2}$ h., nearly cloudless from 20h. Passing showers 11h. till 15 $\frac{1}{2}$ h.	
Saturday ... 21		13.0	15.9	Little cloud till 5 $\frac{1}{2}$ h., cloudy till 11 $\frac{1}{2}$ h., then few clouds generally. Cloudless or nearly so from 14 $\frac{1}{2}$ h.

## CENSUS OF ENGLAND AND WALES, 1931

Census volumes in respect of the counties of England and Wales have now been published.

Parts I of the series, which are complete, relate to the areas as constituted at the date of the Census. Parts II will deal with the changes in boundary effected by County schemes under the Local Government Act of 1929, and will provide a limited range of statistics in respect of the newly constituted areas.

Sectional volumes presenting the results of the census of industries, occupations, etc. are also available, and particulars will be furnished on application.

## EXPLANATORY STATEMENT

TABLE I shows, for London and the County Boroughs and those urban districts with resident populations exceeding 50,000 at the last Census, the number of births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday. The births relate to those registered in the area, but include births occurring in municipal maternity hospitals situate outside the area to which they belong.

The deaths are exclusive of non-residents but corrected as far as possible by the inclusion of deaths of residents in other areas. The deaths in Edinburgh and Glasgow are fully corrected for non-residents; those in Dublin and Belfast are corrected by the exclusion of deaths of non-residents occurring in public institutions.

TABLE 2 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for the previous year.

TABLE 3 is a summary of cases of certain specified infectious diseases in England and Wales notifiable under the general law or under orders made by the Local Government Board or Minister of Health and is based upon weekly returns received from the Medical Officers of Health of all Local (and Port) Health Authorities.

The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are *omitted* from this Summary.

TABLE 3A is similar to Table 3, but relates to the returns received too late for inclusion in Table 3 of the previous week. It includes revised figures for England and Wales as a whole for that week.

TABLE 4 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for the previous year.

TABLE 5 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 6 is a Report of the meteorological observations taken at Greenwich on each day of the week.

Summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, are published in the Registrar-General's Quarterly Return and the Statistical Review (Part I).

## NOTES FOR THE WEEK ENDED 28th MAY, 1938

### BIRTHS AND DEATHS.

In the 126 County Boroughs and Great Towns of England and Wales the live births registered in the twenty-first week of the year numbered 6,973 corresponding to an annual rate of 17.1 per 1,000 living: stillbirths numbered 291 corresponding to a rate of 40 per 1,000 total births registered (including stillborn): the deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 4,689 (12 more than in the preceding week).

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 54 against 55, 64 and 53 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,313 live births registered corresponding to an annual rate of 16.7 per 1,000 living: stillbirths numbered 44 corresponding to a rate of 32 per 1,000 total births (including stillborn): the deaths (excluding stillbirths) numbered 927 (16 more than in the preceding week): infant mortality, based on the average weekly number of live births during the last 52 weeks, was 48, against 39, 59 and 43 in the preceding three weeks.

**Table 3.—Notifications of Infectious Diseases.**

**Number of cases notified in the week ended 28th May, 1938, in Administrative Areas and Port Health Districts with Summary for England and Wales**

*Note.*—Where no return has been received a \* is inserted in the columns. Totals shown against the names of Counties include any associated County Boroughs. The letters in the last column denote the following diseases :—A, Cholera ; B, Plague ; C, Puerperal fever (London A. C. only) ; D, Cerebro-spinal fever ; E, Acute poliomyelitis ; F, Acute polio-encephalitis ; G, Acute encephalitis lethargica ; H, Typhus fever ; I, Relapsing feve ; J, Continued fever (London A. C. only) ; L, Dysentery ; M, Ophthalmia neonatorum ; N, Puerperal pyrexia†.

† By virtue of the Public Health Act, 1936, in all areas outside London A. C., conditions notifiable as puerperal fever prior to the 1st October, 1937, are, from that date, notifiable as and included with notifications of puerperal pyrexia.

**Summary.**

	Small-pox.	Scarlet fever.	Diphtheria.	Enteric (typhoid and paratyphoid) fever.	Acute pneumonia (primary or influenzal).	Cholera.	Plague.	Puerperal fever. (London A. C. only).	Cerebro-spinal fever.	Acute poliomyelitis.	Acute polioencephalitis.	Acute encephalitis lethargica.	Typhus fever.	Relapsing fever.	Continued fever. (London A. C. only).	Dysentery.	Ophthalmia neonatorum.	Puerperal pyrexia.†

\* The figures in this Table relate to the areas as constituted at the date of the weekly returns no corrections having been made for changes in boundary. The live births are derived from the weekly returns furnished by the Registrars and differ from those published for the towns in the Quarterly Return which are corrected for births occurring away from the usual residence of the parents.

† The figures for the Great Towns in the weekly columns relate to 125 Towns up to and including the week ended 2nd April and hereafter to 126 Towns. The comparable totals for the years 1937 and 1938 in the last two columns, are in respect of 122 Towns to the end of March and 124 Towns thereafter.

Friday	... 27		1.7	16.1	Overcast or nearly so. Slight rain about 12h., and rain 13h. till 16h.
Saturday	... 28		0.2	16.2	Very cloudy till 4h., then overcast. Slight rain 6h. till 8h., then rain till 13h. Slight rain 17h. till 19h. and occasional rain from 22h.
No. of Column		25	Sum 27.7	Sum 112.4	
			26	27	

The results apply to the Civil Day, or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1903, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "higher" and - "lower" than the average.

The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined.

The numbers in column 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine on each day.

The reading of the barometer increased from 30.13 ins. at the beginning of the week to 30.14 ins. by 9h. on May 22; decreased to 29.80 ins. by 16h. on 23rd; increased to 29.89 in. by 21h. on same day; decreased to 29.32 in. by 3h. on 28th; increased and was 29.44 ins. by midnight on same day.

## CENSUS OF ENGLAND AND WALES, 1931

Census volumes in respect of the counties of England and Wales have now been published.

Parts I of the series, which are complete, relate to the areas as constituted at the date of the Census. Parts II will deal with the changes in boundary effected by County schemes under the Local Government Act of 1929, and will provide a limited range of statistics in respect of the newly constituted areas.

Sectional volumes presenting the results of the census of industries, occupations, etc. are also available, and particulars will be furnished on application.

## EXPLANATORY STATEMENT

TABLE I shows, for London and the County Boroughs and those urban districts with resident populations exceeding 50,000 at the last Census, the number of births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday. The births relate to those registered in the area, but include births occurring in municipal maternity hospitals situate outside the area to which they belong.

The deaths are exclusive of non-residents but corrected as far as possible by the inclusion of deaths of residents in other areas. The deaths in Edinburgh and Glasgow are fully corrected for non-residents; those in Dublin and Belfast are corrected by the exclusion of deaths of non-residents occurring in public institutions.

TABLE 2 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for the previous year.

TABLE 3 is a summary of cases of certain specified infectious diseases in England and Wales notifiable under the general law or under orders made by the Local Government Board or Minister of Health and is based upon weekly returns received from the Medical Officers of Health of all Local (and Port) Health Authorities.

The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are *omitted* from this Summary.

TABLE 3A is similar to Table 3, but relates to the returns received too late for inclusion in Table 3 of the previous week. It includes revised figures for England and Wales as a whole for that week.

TABLE 4 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for the previous year.

TABLE 5 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 6 is a Report of the meteorological observations taken at Greenwich on each day of the week.

Summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, are published in the Registrar-General's Quarterly Return and the Statistical Review (Part I).

## NOTES FOR THE WEEK ENDED 4th JUNE, 1938

### BIRTHS AND DEATHS.

In the 126 County Boroughs and Great Towns of England and Wales the live births registered in the twenty-second week of the year numbered 7,083 corresponding to an annual rate of 17.4 per 1,000 living: stillbirths numbered 310 corresponding to a rate of 42 per 1,000 total births registered (including stillborn): the deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 4,504 (185 less than in the preceding week).

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 53 against 64, 53 and 54 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,349 live births registered corresponding to an annual rate of 17.2 per 1,000 living: stillbirths numbered 51 corresponding to a rate of 36 per 1,000 total births (including stillborn): the deaths (excluding stillbirths) numbered 849 (78 less than in the preceding week): infant mortality, based on the average weekly number of live births during the last 52 weeks, was 50, against 59, 43 and 48 in the preceding three weeks.

Table 3.—Notifications of Infectious Diseases.

Number of cases notified in the week ended 4th June, 1938, in Administrative Areas and Port Health Districts with Summary for England and Wales

*Note.*—Where no return has been received a \* is inserted in the columns. Totals shown against the names of Counties include any associated County Boroughs. The letters in the last column denote the following diseases :—A, Cholera; B, Plague; C, Puerperal fever (London A. C. only); D, Cerebro-spinal fever; E, Acute poliomyelitis; F, Acute poli-encephalitis; G, Acute encephalitis lethargica; H, Typhus fever; I, Relapsing fever; J, Continued fever (London A. C. only); L, Dysentery; M, Ophthalmia neonatorum; N, Puerperal pyrexia†.

† By virtue of the Public Health Act, 1936, in all areas outside London A. C., conditions notifiable as puerperal fever prior to the 1st October, 1937, are, from that date, notifiable as and included with notifications of puerperal pyrexia.

Summary.

	Small-pox.	Scarlet fever.	Diphtheria.	Enteric (typhoid and paratyphoid) fever.	Acute pneumonia (primary or influenzal).	Cholera.	Plague.	Puerperal fever. (London A. C. only).	Cerebro-spinal fever.	Acute poliomyelitis.	Acute polioencephalitis.	Acute encephalitis lethargica.	Typhus fever.	Relapsing fever.	Continued fever. (London A. C. only).	Dysentery.	Ophthalmia neonatorum.	Puerperal pyrexia.†

\* The figures in this Table relate to the areas as constituted at the date of the weekly returns no corrections having been made for changes in boundary. The live births are derived from the weekly returns furnished by the Registrars and differ from those published for the towns in the Quarterly Return which are corrected for births occurring away from the usual residence of the parents.

† The figures for the Great Towns in the weekly columns relate to 125 Towns up to and including the week ended 2nd April and thereafter to 126 Towns. The comparable totals for the years 1937 and 1938 in the last two columns, are in respect of 122 Towns to the end of March and 124 Towns thereafter.

The results apply to the Civil Day, or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "higher" and - "lower" than the average.

The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined.

The numbers in column 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer increased from 29.44 ins. at the beginning of the week to 29.57 ins. by 15h. on May 20th; decreased to 29.28 ins. by 22h. on May 29th; increased to 29.77 ins. by 7h. on May 31st; decreased to 29.26 ins. by 2h. on June 2nd; increased to 29.91 ins. by 22h. on June 3rd; decreased and was 29.58 ins. by midnight on June 4th.

## CENSUS OF ENGLAND AND WALES, 1931

Census volumes in respect of the counties of England and Wales have now been published.

Parts I of the series, which are complete, relate to the areas as constituted at the date of the Census. Parts II will deal with the changes in boundary effected by County schemes under the Local Government Act of 1929, and will provide a limited range of statistics in respect of the newly constituted areas.

Sectional volumes presenting the results of the census of industries, occupations, etc. are also available, and particulars will be furnished on application.

# A Clinical and Genetic Study of 1,280 Cases of Mental Defect

MEDICAL RESEARCH COUNCIL

SPECIAL REPORT No. 229

Material likely to determine the general course in research in Mental Deficiency in this country for some years to come is contained in this new Report. The work is based on the researches undertaken since 1930, which involve a close clinical and genetical study of a representative group of 1,280 patients of all grades and types of mental deficiency. The cases studied were carefully graded and subsequently classified by clinical diagnosis. The Council states that the researches constitute a new and refreshing approach to the old and much discussed problem of the relative rôles of heredity and environment in the development of the human race. That the problem with which they deal is one of urgency is apparent from the fact that it is estimated that there are some 300,000 mental defectives in England and Wales alone.

## EXPLANATORY STATEMENT

TABLE I shows, for London and the County Boroughs and those urban districts with resident populations exceeding 50,000 at the last Census, the number of births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday. The births relate to those registered in the area, but include births occurring in municipal maternity hospitals situate outside the area to which they belong.

The deaths are exclusive of non-residents but corrected as far as possible by the inclusion of deaths of residents in other areas. The deaths in Edinburgh and Glasgow are fully corrected for non-residents; those in Dublin and Belfast are corrected by the exclusion of deaths of non-residents occurring in public institutions.

TABLE 2 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for the previous year.

TABLE 3 is a summary of cases of certain specified infectious diseases in England and Wales notifiable under the general law or under orders made by the Local Government Board or Minister of Health and is based upon weekly returns received from the Medical Officers of Health of all Local (and Port) Health Authorities.

The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

TABLE 3A is similar to Table 3, but relates to the returns received too late for inclusion in Table 3 of the previous week. It includes revised figures for England and Wales as a whole for that week.

TABLE 4 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for the previous year.

TABLE 5 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 6 is a Report of the meteorological observations taken at Greenwich on each day of the week.

Summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, are published in the Registrar-General's Quarterly Return and the Statistical Review (Part I).

## NOTES FOR THE WEEK ENDED 11th JUNE, 1938

### BIRTHS AND DEATHS.

In the 126 County Boroughs and Great Towns of England and Wales the live births registered in the twenty-third week of the year numbered 6,262 corresponding to an annual rate of 15.4 per 1,000 living; stillbirths numbered 278 corresponding to a rate of 43 per 1,000 total births registered (including stillborn); the deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 4,321 (183 less than in the preceding week).

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 51 against 53, 54 and 53 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,202 live births registered corresponding to an annual rate of 15.3 per 1,000 living; stillbirths numbered 45 corresponding to a rate of 36 per 1,000 total births (including stillborn); the deaths (excluding stillbirths) numbered 827 (22 less than in the preceding week); infant mortality, based on the average weekly number of live births during the last 52 weeks, was 38, against 43, 48 and 50 in the preceding three weeks.

**Table 3.—Notifications of Infectious Diseases.**

**Number of cases notified in the week ended 11th June, 1938, in Administrative Areas and Port Health Districts with Summary for England and Wales**

*Note.*—Where no return has been received a \* is inserted in the columns. Totals shown against the names of Counties include any associated County Boroughs. The letters in the last column denote the following diseases:—A, Cholera; B, Plague; C, Puerperal fever (London A. C. only); D, Cerebro-spinal fever; E, Acute poliomyelitis; F, Acute poliomyelitis; G, Acute encephalitis lethargica; H, Typhus fever; I, Relapsing fever; J, Continued fever (London A. C. only); L, Dysentery; M, Ophthalmia neonatorum; N, Puerperal pyrexia†.

† By virtue of the Public Health Act, 1936, in all areas outside London A. C., conditions notifiable as puerperal fever prior to the 1st October, 1937, are, from that date, notifiable as and included with notifications of puerperal pyrexia.

**Summary.**

	Small-pox.	Scarlet fever.	Diphtheria.	Enteric (typhoid and paratyphoid) fever.	Acute pneumonia (primary or influenzal).	Cholera.	Plague.	Puerperal fever. (London A. C. only).	Cerebro-spinal fever.	Acute poliomyelitis.	Acute poliomyelitis.	Acute encephalitis lethargica.	Typhus fever.	Relapsing fever.	Continued fever. (London A. C. only).	Dysentery.	Ophthalmia neonatorum.	Puerperal pyrexia.†

\* The figures in this Table relate to the areas as constituted at the date of the weekly returns no corrections having been made for changes in boundary. The live births are derived from the weekly returns furnished by the Registrars and differ from those published for the towns in the Quarterly Return which are corrected for births occurring away from the usual residence of the parents.

† The figures for the Great Towns in the weekly columns relate to 125 Towns up to and including the week ended 2nd April and thereafter to 126 Towns. The comparable totals for the years 1937 and 1938 in the last two columns, are in respect of 122 Towns to the end of March and 124 Towns thereafter.

**Table 5.—Meteorology in certain Towns during the Week ended Saturday, 11th June, 1938.**

Saturday	11		7.6	16.6	Cloudy till 11h., then cloudless. Cloudy generally 7h. till 17h., then nearly overcast or overcast.
No. of Column		25	Sum 42.1	Sum 115.4	

The results apply to the Civil Day, or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1903, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. "in reading columns 8 and 23 it will be borne in mind that + indicates *higher* and - *lower*" than the average.

The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined.

The number in column 26, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer decreased from 30.58 ins. at the beginning of the week to 29.53 ins. by 3h. on June 3th, increased to 29.86 ins. by 10h. on June 6th; decreased to 29.79 ins. by 3h. on June 7th; increased to 30.05 ins. by 8h. on June 11th; decreased and was 29.99 ins. by midnight on the same day.

The results apply to the Civil Day, or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. # CENSUS OF ENGLAND AND WALES, 1931

Census volumes in respect of the counties of England and Wales have now been published.

Parts I of the series, which are complete, relate to the areas as constituted at the date of the Census. Parts II will deal with the changes in boundary effected by County schemes under the Local Government Act of 1929, and will provide a limited range of statistics in respect of the newly constituted areas.

Sectional volumes presenting the results of the census of industries, occupations, etc. are also available, and particulars will be furnished on application.

# A Clinical and Genetic Study of 1,280 Cases of Mental Defect

MEDICAL RESEARCH COUNCIL

SPECIAL REPORT No. 229

Material likely to determine the general course in research in Mental Deficiency in this country for some years to come is contained in this new Report. The work is based on the researches undertaken since 1930, which involve a close clinical and genetical study of a representative group of 1,280 patients of all grades and types of mental deficiency. The cases studied were carefully graded and subsequently classified by clinical diagnosis. The Council states that the researches constitute a new and refreshing approach to the old and much discussed problem of the relative rôles of heredity and environment in the development of the human race. That the problem with which they deal is one of urgency is apparent from the fact that it is estimated that there are some 300,000 mental defectives in England and Wales alone.

## EXPLANATORY STATEMENT

TABLE I shows, for London and the County Boroughs and those urban districts with resident populations exceeding 50,000 at the last Census, the number of births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday. The births relate to those registered in the area, but include births occurring in municipal maternity hospitals situate outside the area to which they belong.

The deaths are exclusive of non-residents but corrected as far as possible by the inclusion of deaths of residents in other areas. The deaths in Edinburgh and Glasgow are fully corrected for non-residents; those in Dublin and Belfast are corrected by the exclusion of deaths of non-residents occurring in public institutions.

TABLE 2 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for the previous year.

TABLE 3 is a summary of cases of certain specified infectious diseases in England and Wales notifiable under the general law or under orders made by the Local Government Board or Minister of Health and is based upon weekly returns received from the Medical Officers of Health of all Local (and Port) Health Authorities.

The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are *omitted* from this Summary.

TABLE 3A is similar to Table 3, but relates to the returns received too late for inclusion in Table 3 of the previous week. It includes revised figures for England and Wales as a whole for that week.

TABLE 4 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for the previous year.

TABLE 5 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 6 is a Report of the meteorological observations taken at Greenwich on each day of the week.

Summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, are published in the Registrar-General's Quarterly Return and the Statistical Review (Part I).

## NOTES FOR THE WEEK ENDED 18th JUNE, 1938

### BIRTHS AND DEATHS.

In the 126 County Boroughs and Great Towns of England and Wales the live births registered in the twenty-fourth week of the year numbered 7,685 corresponding to an annual rate of 18.9 per 1,000 living: stillbirths numbered 297 corresponding to a rate of 37 per 1,000 total births registered (including stillborn): the deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 4,172 (149 less than in the preceding week).

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 51 against 54, 53 and 51 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,393 live births registered corresponding to an annual rate of 17.7 per 1,000 living: stillbirths numbered 55 corresponding to a rate of 38 per 1,000 total births (including stillborn): the deaths (excluding stillbirths) numbered 736 (91 less than in the preceding week): infant mortality, based on the average weekly number of live births during the last 52 weeks, was 48, against 48, 50 and 38 in the preceding three weeks.

Table 3.—Notifications of Infectious Diseases.

Number of cases notified in the week ended 18th June, 1938, in Administrative Areas and Port Health Districts with Summary for England and Wales

*Note.*—Where no return has been received a \* is inserted in the columns. Totals shown against the names of Counties include any associated County Boroughs. The letters in the last column denote the following diseases:—A, Cholera; B, Plague; C, Puerperal fever (London A. C. only); D, Cerebro-spinal fever; E, Acute poliomyelitis; F, Acute poliomyelitis; G, Acute encephalitis lethargica; H, Typhus fever; I, Relapsing fever; J, Continued fever (London A. C. only); L, Dysentery; M, Ophthalmia neonatorum; N, Puerperal pyrexia†.

† By virtue of the Public Health Act, 1936, in all areas outside London A. C., conditions notifiable as puerperal fever prior to the 1st October, 1937, are, from that date, notifiable as and included with notifications of puerperal pyrexia

## Summary.

			Small-pox.	Scarlet fever.	Diphtheria.	Enteric (typhoid and paratyphoid) fever.	Acute meningitis (primary or influenzal).	Cholera.	Plague.	Puerperal fever. (London A. C. only).	Cerebro-spinal fever.	Acute poliomyelitis.	Acute poliomyelitis.	Acute encephalitis lethargica.	Typhus fever.	Relapsing fever.	Continued fever. (London A. C. only).	Dysentery.	Ophthalmia neonatorum.	Puerperal pyrexia.†

\* The figures in this Table relate to the areas as constituted at the date of the weekly returns no corrections having been made for changes in boundary. The live births are derived from the weekly returns furnished by the Registrars and differ from those published for the towns in the Quarterly Return which are corrected for births occurring away from the usual residence of the parents.

† The figures for the Great Towns in the weekly columns relate to 125 Towns up to and including the week ended 2nd April and thereafter to 126 Towns. The comparable totals for the years 1937 and 1938 in the last two columns, are in respect of 122 Towns to the end of March and 124 Towns thereafter.

**Table 5.—Meteorology in certain Towns during the Week ended Saturday, 18th June, 1938.**

Saturday	18		3.9	16.6	Little cloud till 9h., becoming overcast by 10h. Clearing after 22h. Slight rain at 16h.
No. of Column		25	Sum 53.2	Sum 116.2	27

The results apply to the Civil Day, or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "higher" and - "lower" than the average.

The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined.

The numbers in column 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine on each day.

The reading of the barometer decreased from 29.99 ins. at the beginning of the week to 29.97 ins. by 3h. on June 12th; increased to 30.16 ins. by 8h. on June 13th; decreased to 30.02 ins. by 18h. on June 14th; increased to 30.19 ins. by 8h. on June 16th; decreased and was 29.78 ins. by midnight on June 18th.

## CENSUS OF ENGLAND AND WALES, 1931

Census volumes in respect of the counties of England and Wales have now been published.

Parts I of the series, which are complete, relate to the areas as constituted at the date of the Census. Parts II will deal with the changes in boundary effected by County schemes under the Local Government Act of 1929, and will provide a limited range of statistics in respect of the newly constituted areas.

Sectional volumes presenting the results of the census of industries, occupations, etc. are also available, and particulars will be furnished on application.

# BETTER HEALTH

Whitefriars House, 68, Fleet Street, London, E.C. 4.

The Official Journal of the Central Council for Health Education. It is intended to carry simple, non-technical and accurate teaching on the prevention of disease into the homes of the people. With the assistance of upwards of 150 health departments, the circulation has now reached 300,000 copies per month.

Quantities are supplied at special prices for local distribution. Write for specimen copy and particulars.

## A Clinical and Genetic Study of 1,280 Cases of Mental Defect

MEDICAL RESEARCH COUNCIL  
SPECIAL REPORT No. 229

Material likely to determine the general course in research in Mental Deficiency in this country for some years to come is contained in this new Report. The work is based on the researches undertaken since 1930, which involve a close clinical and genetical study of a representative group of 1,280 patients of all grades and types of mental deficiency. The cases studied were carefully graded and subsequently classified by clinical diagnosis. The Council states that the researches constitute a new and refreshing approach to the old and much discussed problem of the relative rôles of heredity and environment in the development of the human race. That the problem with which they deal is one of urgency is apparent from the fact that it is estimated that there are some 300,000 mental defectives in England and Wales alone.

## EXPLANATORY STATEMENT

TABLE I shows, for London and the County Boroughs and those urban districts with resident populations exceeding 50,000 at the last Census, the number of births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday. The births relate to those registered in the area, but include births occurring in municipal maternity hospitals situate outside the area to which they belong.

The deaths are exclusive of non-residents but corrected as far as possible by the inclusion of deaths of residents in other areas. The deaths in Edinburgh and Glasgow are fully corrected for non-residents; those in Dublin and Belfast are corrected by the exclusion of deaths of non-residents occurring in public institutions.

TABLE 2 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for the previous year.

TABLE 3 is a summary of cases of certain specified infectious diseases in England and Wales notifiable under the general law or under orders made by the Local Government Board or Minister of Health and is based upon weekly returns received from the Medical Officers of Health of all Local (and Port) Health Authorities.

The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are *omitted* from this Summary.

TABLE 3A is similar to Table 3, but relates to the returns received too late for inclusion in Table 3 of the previous week. It includes revised figures for England and Wales as a whole for that week.

TABLE 4 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for the previous year.

TABLE 5 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 6 is a Report of the meteorological observations taken at Greenwich on each day of the week.

Summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, are published in the Registrar-General's Quarterly Return and the Statistical Review (Part I).

## NOTES FOR THE WEEK ENDED 25th JUNE, 1938

### BIRTHS AND DEATHS.

In the 126 **County Boroughs and Great Towns** of England and Wales the live births registered in the twenty-fifth week of the year numbered 7,397 corresponding to an annual rate of 18.2 per 1,000 living: stillbirths numbered 276 corresponding to a rate of 36 per 1,000 total births registered (including stillborn): the deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 4,084 (88 less than in the preceding week).

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 49 against 53, 51 and 51 in the preceding three weeks.

In **London** (Administrative County including the City of London) there were 1,407 live births registered corresponding to an annual rate of 17.9 per 1,000 living: stillbirths numbered 42 corresponding to a rate of 29 per 1,000 total births (including stillborn): the deaths (excluding stillbirths) numbered 789 (53 more than in the preceding week): infant mortality, based on the average weekly number of live births during the last 52 weeks, was 37, against 50, 38 and 48 in the preceding three weeks.

Table 3.—Notifications of Infectious Diseases.

Number of cases notified in the week ended 25th June, 1938, in Administrative Areas and Port Health Districts with Summary for England and Wales

*Note.*—Where no return has been received a \* is inserted in the columns. Totals shown against the names of Counties include any associated County Boroughs. The letters in the last column denote the following diseases :—A, Cholera ; B, Plague ; C, Puerperal fever (London A. C. only) ; D, Cerebro-spinal fever ; E, Acute poliomyelitis ; F, Acute polio-encephalitis ; G, Acute encephalitis lethargica ; H, Typhus fever ; I, Relapsing fever ; J, Continued fever (London A. C. only) ; L, Dysentery ; M, Ophthalmia neonatorum ; N, Puerperal pyrexia†.

† By virtue of the Public Health Act, 1936, in all areas outside London A. C., conditions notifiable as puerperal fever prior to the 1st October, 1937, are, from that date, notifiable as and included with notifications of puerperal pyrexia

Summary.

	Small-pox.	Scarlet fever.	Diphtheria.	Enteric (typhoid and paratyphoid) fever.	Acute pneumonia (primary or influenzal).	Cholera.	Plague.	Puerperal fever. (London A. C. only).	Cerebro-spinal fever.	Acute poliomyelitis.	Acute polioencephalitis.	Acute encephalitis lethargica.	Typhus fever.	Relapsing fever.	Continued fever. (London A. C. only).	Dysentery.	Ophthalmia neonatorum.	Puerperal pyrexia.†

\* The figures in this Table relate to the areas as constituted at the date of the weekly returns no corrections having been made for changes in boundary. The live births are derived from the weekly returns furnished by the Registrars and differ from those published for the towns in the Quarterly Return which are corrected for births occurring away from the usual residence of the parents.

† The figures for the Great Towns in the weekly columns relate to 125 Towns up to and including the week ended 2nd April and thereafter to 126 Towns. The comparable totals for the years 1937 and 1938 in the last two columns, are in respect of 122 Towns to the end of March and 124 Towns thereafter.

DATE.	ATMOSPHERIC ELECTRICITY. (For explanation of symbols, see Note.)	Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.	
June, 1938.					
Sunday ... 19		6.5	16.6	Cloudless till 3h., then nearly overcast. Cloudy from 12h. till 20h.; nearly cloudless by 21h. Slight rain at 54h. Solar halo 17h. till 184h.	
Monday ... 20		12.3	16.6	Little cloud till 4h., then cloudy. Few clouds from 9h. Solar halo about 8h.	
Tuesday ... 21		14.3	16.6	Cloudless till 7h., few thin clouds till 20h., then cloudless. Solar halo 114h.	
Wednesday ... 22		3.5	16.6	Cloudless till 2h., cloudy by 4h. Few clouds 114h. till 144h., then nearly overcast. Rain or slight rain 164h. till 184h.	
Thursday ... 23		1.4	16.6	Nearly overcast or overcast. Slight drizzle 64h. till 74h.	
Friday ... 24		6.8	16.6	Overcast till 7h., very cloudy till 20h., becoming cloudless by 21h.	
Saturday ... 25		7.2	16.6	Cloudless till 5h., becoming cloudy by 6h. Fresh wind 9h. till 20h.	
No. of Column	25	Sum 52.0	Sum 116.2		27

Discontinued.

The results apply to the Civil Day, or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1903, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "higher" and - "lower" than the average.

The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined.

The numbers in column 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine on each day.

The reading of the barometer increased from 29.78 ins. at the beginning of the week to 30.11 ins. by 11h. on June 20th; decreased generally to 29.64 ins. by 13h. on June 25th; increased and was 29.73 ins. by midnight on the same day.

## CENSUS OF ENGLAND AND WALES, 1931

Census volumes in respect of the counties of England and Wales have now been published.

Parts I of the series, which are complete, relate to the areas as constituted at the date of the Census. Parts II will deal with the changes in boundary effected by County schemes under the Local Government Act of 1929, and will provide a limited range of statistics in respect of the newly constituted areas.

Sectional volumes presenting the results of the census of industries, occupations, etc. are also available, and particulars will be furnished on application.

# A Clinical and Genetic Study of 1,280 Cases of Mental Defect

MEDICAL RESEARCH COUNCIL  
SPECIAL REPORT No. 229

Material likely to determine the general course in research in Mental Deficiency in this country for some years to come is contained in this new Report. The work is based on the researches undertaken since 1930, which involve a close clinical and genetical study of a representative group of 1,280 patients of all grades and types of mental deficiency. The cases studied were carefully graded and subsequently classified by clinical diagnosis. The Council states that the researches constitute a new and refreshing approach to the old and much discussed problem of the relative rôles of heredity and environment in the development of the human race. That the problem with which they deal is one of urgency is apparent from the fact that it is estimated that there are some 300,000 mental defectives in England and Wales alone.

## EXPLANATORY STATEMENT

TABLE I shows, for London and the County Boroughs and those urban districts with resident populations exceeding 50,000 at the last Census, the number of births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday. The births relate to those registered in the area, but include births occurring in municipal maternity hospitals situate outside the area to which they belong.

The deaths are exclusive of non-residents but corrected as far as possible by the inclusion of deaths of residents in other areas. The deaths in Edinburgh and Glasgow are fully corrected for non-residents; those in Dublin and Belfast are corrected by the exclusion of deaths of non-residents occurring in public institutions.

TABLE 2 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for the previous year.

TABLE 3 is a summary of cases of certain specified infectious diseases in England and Wales notifiable under the general law or under orders made by the Local Government Board or Minister of Health and is based upon weekly returns received from the Medical Officers of Health of all Local (and Port) Health Authorities.

The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are *omitted* from this Summary.

TABLE 3A is similar to Table 3, but relates to the returns received too late for inclusion in Table 3 of the previous week. It includes revised figures for England and Wales as a whole for that week.

TABLE 4 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for the previous year.

TABLE 5 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 6 is a Report of the meteorological observations taken at Greenwich on each day of the week.

Summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, are published in the Registrar-General's Quarterly Return and the Statistical Review (Part I).

## NOTES FOR THE WEEK ENDED 2nd JULY, 1938

### BIRTHS AND DEATHS.

In the 126 County Boroughs and Great Towns of England and Wales the live births registered in the twenty-sixth week of the year numbered 6,884 corresponding to an annual rate of 16.9 per 1,000 living: stillbirths numbered 300 corresponding to a rate of 42 per 1,000 total births registered (including stillborn): the deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 3,926 (158 less than in the preceding week).

Infant mortality, based on the average weekly number of live births during the last 52 weeks, was 46 against 51, 51 and 49 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,313 live births registered corresponding to an annual rate of 16.7 per 1,000 living: stillbirths numbered 46 corresponding to a rate of 34 per 1,000 total births (including stillborn): the deaths (excluding stillbirths) numbered 739 (50 less than in the preceding week): infant mortality, based on the average weekly number of live births during the last 52 weeks, was 42, against 38, 48 and 37 in the preceding three weeks.

**Table 3.—Notifications of Infectious Diseases.**

**Number of cases notified in the week ended 2nd July, 1938, in Administrative Areas and Port Health Districts with Summary for England and Wales**

*Note.*—Where no return has been received a \* is inserted in the columns. Totals shown against the names of Counties include any associated County Boroughs. The letters in the last column denote the following diseases:—A, Cholera; B, Plague; C, Puerperal fever (London A. C. only); D, Cerebro-spinal fever; E, Acute poliomyelitis; F, Acute poliomyelitis; G, Acute encephalitis lethargica; H, Typhus fever; I, Relapsing fever; J, Continued fever (London A. C. only); L, Dysentery; M, Ophthalmia neonatorum; N, Puerperal pyrexia†.

† By virtue of the Public Health Act, 1936, in all areas outside London A. C., conditions notifiable as puerperal fever prior to the 1st October, 1937, are, from that date, notifiable as and included with notifications of puerperal pyrexia.

**Summary.**

		Small-pox.	Scarlet fever.	Diphtheria.	Enteric (typhoid and paratyphoid) fever.	Acute pneumonia (primary or influenzal).	Cholera.	Plague.	Puerperal fever. (London A. C. only).	Cerebro-spinal fever.	Acute poliomyelitis.	Acute poliomyelitis.	Acute encephalitis lethargica.	Typhus fever.	Relapsing fever.	Continued fever. (London A. C. only).	Dysentery.	Ophthalmia neonatorum.	Puerperal pyrexia.†

\* The figures in this Table relate to the areas as constituted at the date of the weekly returns no corrections having been made for changes in boundary. The live births are derived from the weekly returns furnished by the Registrars and differ from those published for the towns in the Quarterly Return which are corrected for births occurring away from the usual residence of the parents.

† The figures for the Great Towns in the weekly columns relate to 126 Towns. The comparable totals for the years 1937 and 1938 in the last two columns, are in respect of 122 Towns to the end of March and 124 Towns thereafter.

Table 5.—Meteorology in certain Towns during the Week ended Saturday, 2nd July, 1938.

DATE.		ATMOSPHERIC ELECTRICITY. (For explanation of symbols, see Note.)	Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
JUNE, 1938.					
Sunday	26		2.9	16.6	Very cloudy or nearly overcast.
Monday	27		1.9	16.6	Very cloudy, overcast 1h. till 15h., then nearly so. Cloudy 18h. till 21h., little cloud by 21h. Fresh wind 7h. till 22h.
Tuesday	28		2.7	16.6	Variably cloudy till 4h., then nearly overcast or overcast. Slight shower 12h., and occasional slight rain from 21h. Fresh wind 12h. till 16h., then strong wind.
Wednesday	29		6.6	16.6	Overcast or nearly so till 9h., very cloudy till 12h., then partially cloudy. Few clouds from 18h. Strong wind till 9h., then fresh wind till 15h.
Thursday	30		6.9	16.6	Little cloud till 1h., then cloudy. Nearly overcast 10h. till 21h., then little cloud. Rain about 13h., at 19h. and at 21h.
Friday	1		7.5	16.6	Little cloud till 6h., then partially cloudy. Overcast from 9h. till 15h., then cloudy generally. Rain 11h. till 12h. and 14h. till 15h. Dew at night.
Saturday	2		6.2	16.6	Cloudy till 1h., then little cloud. Clouding 11h. to nearly overcast by 12h. Very cloudy from 15h. Mist and dew in morning. Occasional slight rain 12h. till 20h. Thunder 14h. and at 17h.
No. of Column		25	26	27	
			Sum 34.7	Sum 116.2	

The results apply to the Civil Day, or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.	The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "higher" and - "lower" than the average.
Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.	The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined.
	The numbers in column 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine on each day.
	The reading of the barometer increased from 29.73 ins. at the beginning of the week to 29.83 ins. by 9h. on June 26th; decreased to 29.46 ins. by 18h. on June 27th; increased to 29.60 ins. by 9h. on June 28; decreased to 29.19 ins. by 9h. on June 29th; increased generally and was 29.81 ins. by midnight on July 2nd.

Discontinued.

The results apply to the Civil Day, or from midnight to midnight, Greenwich Mean Time. The height of the column of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean readings of the dry bulb thermometer, is combined the corrected mean readings of the maximum and minimum thermometer, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. "and" in reading columns 8 and 23 it will be borne in mind that + indicates "higher," and - indicates "lower" than the average.

The values given in column 16 are not corrected for the index error of the thermometer, which cannot be detected.

The numbers in column 6 are derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine on each day.

The reading of the barometer increased from 29.73 ins. at the beginning of the week to 29.83 ins. by 9h. on June 26th; decreased to 29.16 ins. by 18h. on June 27th; increased to 29.18 ins. by 9h. on June 28; decreased to 29.19 ins. by 9h. on June 29th; increased generally and was 29.81 ins. by midnight on July 2nd.

# The Guide to Current Official Statistics

It is the aim of the Permanent Consultative Committee on Official Statistics, in issuing this Annual Guide, to direct the enquirer to all current official publications that contain statistics bearing on his subject, and especially to inform him of the nature of the statistics he will find in the volume to which he is referred. The Guide embraces two distinct sections (i) a Subject Index and (ii) a List of Publications. It covers the whole of the statistical information contained in publications issued by Government Departments in Great Britain and Northern Ireland and is a work of obvious utility.

## CENSUS OF ENGLAND AND WALES, 1931

Census volumes in respect of the counties of England and Wales have now been published.

Parts I of the series, which are complete, relate to the areas as constituted at the date of the Census. Parts II will deal with the changes in boundary effected by County schemes under the Local Government Act of 1929, and will provide a limited range of statistics in respect of the newly constituted areas.

Sectional volumes presenting the results of the census of industries, occupations, etc. are also available, and particulars will be furnished on application.

# A Clinical and Genetic Study of 1,280 Cases of Mental Defect

MEDICAL RESEARCH COUNCIL  
SPECIAL REPORT No. 229

Material likely to determine the general course in research in Mental Deficiency in this country for some years to come is contained in this new Report. The work is based on the researches undertaken since 1930, which involve a close clinical and genetical study of a representative group of 1,280 patients of all grades and types of mental deficiency. The cases studied were carefully graded and subsequently classified by clinical diagnosis. The Council states that the researches constitute a new and refreshing approach to the old and much discussed problem of the relative rôles of heredity and environment in the development of the human race. That the problem with which they deal is one of urgency is apparent from the fact that it is estimated that there are some 300,000 mental defectives in England and Wales alone.

## EXPLANATORY STATEMENT

TABLE I shows, for London and the County Boroughs and those urban districts with resident populations exceeding 50,000 at the last Census, the number of births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday. The births relate to those registered in the area, but include births occurring in municipal maternity hospitals situate outside the area to which they belong.

The deaths are exclusive of non-residents but corrected as far as possible by the inclusion of deaths of residents in other areas. The deaths in Edinburgh and Glasgow are fully corrected for non-residents; those in Dublin and Belfast are corrected by the exclusion of deaths of non-residents occurring in public institutions.

TABLE 2 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for the previous year.

TABLE 3 is a summary of cases of certain specified infectious diseases in England and Wales notifiable under the general law or under orders made by the Local Government Board or Minister of Health and is based upon weekly returns received from the Medical Officers of Health of all Local (and Port) Health Authorities.

The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are *omitted* from this Summary.

TABLE 3A is similar to Table 3, but relates to the returns received too late for inclusion in Table 3 of the previous week. It includes revised figures for England and Wales as a whole for that week.

TABLE 4 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for the previous year.

TABLE 5 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 6 is a Report of the meteorological observations taken at Greenwich on each day of the week.

Summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, are published in the Registrar-General's Quarterly Return and the Statistical Review (Part I).

## NOTES FOR THE WEEK ENDED 9th JULY, 1938

### BIRTHS AND DEATHS.

In the 126 County Boroughs and Great Towns of England and Wales the live births registered in the twenty-seventh week of the year numbered 6,761 corresponding to an annual rate of 16.6 per 1,000 living: stillbirths numbered 326 corresponding to a rate of 4.6 per 1,000 total births registered (including stillborn): the deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 3,851 (76 less than in the preceding week).

Infant mortality based on the average weekly number of live births during the last 52 weeks, was 49 against 51, 49 and 46 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,234 live births registered corresponding to an annual rate of 15.7 per 1,000 living: stillbirths numbered 51 corresponding to a rate of 3.9 per 1,000 total births (including stillborn): the deaths (excluding stillbirths) numbered 701 (37 less than in the preceding week): infant mortality, based on the average weekly number of live births during the last 52 weeks, was 52, against 48, 37 and 42 in the preceding three weeks.

Table 3.—Notifications of Infectious Diseases.

Number of cases notified in the week ended 9th July, 1938, in Administrative Areas and Port Health Districts with Summary for England and Wales

*Note.*—Where no return has been received a \* is inserted in the columns. Totals shown against the names of Counties include any associated County Boroughs. The letters in the last column denote the following diseases:—A, Cholera; B, Plague; C, Puerperal fever (London A. C. only); D, Cerebro-spinal fever; E, Acute poliomyelitis; F, Acute poli-encephalitis; G, Acute encephalitis lethargica; H, Typhus fever; I, Relapsing fever; J, Continued fever (London A. C. only); L, Dysentery; M, Ophthalmia neonatorum; N, Puerperal pyrexia†.

† By virtue of the Public Health Act, 1936, in all areas outside London A. C., conditions notifiable as puerperal fever prior to the 1st October, 1937, are, from that date, notifiable as and included with notifications of puerperal pyrexia.

## Summary.

		Small-pox.	Scarlet fever.	Diphtheria.	Enteric (typhoid and paratyphoid) fever.	Acute pneumonia (primary or influenzal).	Cholera.	Plague.	Puerperal fever. (London A. C. only).	Cerebro-spinal fever.	Acute poliomyelitis.	Acute poli-encephalitis.	Acute encephalitis lethargica.	Typhus fever.	Relapsing fever.	Continued fever. (London A. C. only).	Dysentery.	Ophthalmia neonatorum.	Puerperal pyrexia.†

\* The figures in this Table relate to the areas as constituted at the date of the weekly returns no corrections having been made for changes in boundary. The live births are derived from the weekly returns furnished by the Registrars and differ from those published for the towns in the Quarterly Return which are corrected for births occurring away from the usual residence of the parents.

† The figures for the Great Towns in the weekly columns relate to 126 Towns. The comparable totals for the years 1937 and 1938 in the last two columns, are in respect of 122 Towns to the end of March and 124 Towns thereafter.

**Table 5.—Meteorology in certain Towns during the Week ended Saturday, 9th July, 1938.**

DATE.	ATMOSPHERIC ELECTRICITY. (For explanation of symbols, see Note.)	Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
July, 1938.				
Sunday ... 3		4.3	16.5	Little cloud till 4h., cloudy by 4½h., nearly overcast 9h. till 15h., then generally cloudy.
Monday ... 4		5.4	16.5	Very cloudy generally, clearing from 23h. Thunderstorm between 14h. 30m. and 15h. 20m.
Tuesday ... 5		7.2	16.5	Little cloud till 5h., cloudy by 6h., nearly overcast generally from 9h. Thunder showers about 9h., 10½h., and at 13h. Distant thunder and lightning in evening.
Wednesday ... 6		8.0	16.5	Nearly overcast till 1h., then nearly cloudless. Cloudy or very cloudy from 8h. Showers at 12½h. and 13½h. Solar halo about 19½h.
Thursday ... 7	Discontinued.	4.1	16.4	Nearly overcast generally. Variably cloudy from 10h. Shower 0½h., 12h., and about 14h., and thunderstorm 16½h. till 17½h.
Friday ... 8		0.4	16.4	Very cloudy till 6h., then overcast or nearly so. Rain or drizzle 7½h. till 12½h. and slight drizzle 14½h. till 17½h.
Saturday ... 9		3.3	16.4	Overcast or nearly so. Occasional rain 16½h. till 20½h.
No. of Column	25	Sum 32.7	Sum 115.2	
		26	27	

The results apply to the Civil Day, or from midnight to midnight, Greenwich Mean Time. The height of the column of the barometer is 132 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.
Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 30 years ending 1903. With the corrected mean reading of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.
The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 35 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 30 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "higher," and - "lower" than the average.
The values given in column 10 are not corrected for the index error of the thermometer, which cannot be determined.
The numbers in column 26, derived from the Campbell-Stokes Sunshine Instrument show the aggregate duration of bright sunshine on each day.
The reading of the barometer increased from 29.81 ins. at the beginning of the week to 29.87 ins. by 10h. on July 3rd; decreased to 29.37 ins. by 10h. on July 5th; increased to 29.80 ins. by 21h. on July 6th; decreased to 29.43 ins. by 9h. on July 8th; increased and was 29.97 ins. by midnight on July 9th.

The results apply to the Civil Day, or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1903, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "higher" and - "lower" than the average.

The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined.

The numbers in column 26, derived from the Campbell-Stokes Sunshine Instrument show the aggregate duration of  $br_{15}^{12}$  sunshine on each day.

The reading of the barometer increased from 29.81 ins. at the beginning of the week to 29.87 ins. by 10h. on July 3rd; decreased to 29.37 ins. by 10h. on July 5th; increased to 29.80 ins. by 21h. on July 6th; decreased to 29.43 ins. by 9h. on July 8th; increased and was 29.97 ins. by midnight on July 9th.

Discontinued.

# The Guide to Current Official Statistics

It is the aim of the Permanent Consultative Committee on Official Statistics, in issuing this Annual Guide, to direct the enquirer to all current official publications that contain statistics bearing on his subject, and especially to inform him of the nature of the statistics he will find in the volume to which he is referred. The Guide embraces two distinct sections (i) a Subject Index and (ii) a List of Publications. It covers the whole of the statistical information contained in publications issued by Government Departments in Great Britain and Northern Ireland and is a work of obvious utility.

## CENSUS OF ENGLAND AND WALES, 1931

Census volumes in respect of the counties of England and Wales have now been published.

Parts I of the series, which are complete, relate to the areas as constituted at the date of the Census. Parts II will deal with the changes in boundary effected by County schemes under the Local Government Act of 1929, and will provide a limited range of statistics in respect of the newly constituted areas.

Sectional volumes presenting the results of the census of industries, occupations, etc. are also available, and particulars will be furnished on application.

## EPIDEMICS IN SCHOOLS

MEDICAL RESEARCH COUNCIL

SPECIAL REPORT No. 227

School communities offer somewhat special facilities for the investigation of epidemic and other illnesses and during the last seven years a Committee appointed by the Medical Research Council has been investigating the subject from both scientific and practical standpoints.

Although the Committee responsible for the report declare that their investigations throw no light on the question of why an epidemic spreads, nor on the factors favouring limitation of an outbreak, their careful study based on data collected over five years throws a great deal of light on the problem of school infections generally. It shows the present position in schools by means of a detailed statistical analysis (illustrating for example the often marked differences between the health record in schools for boys and for girls) and points to the important problems still unsolved and indicates how they may best be tackled.

## EXPLANATORY STATEMENT

TABLE I shows, for London and the County Boroughs and those urban districts with resident populations exceeding 50,000 at the last Census, the number of births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday. The births relate to those registered in the area, but include births occurring in municipal maternity hospitals situate outside the area to which they belong.

The deaths are exclusive of non-residents but corrected as far as possible by the inclusion of deaths of residents in other areas. The deaths in Edinburgh and Glasgow are fully corrected for non-residents; those in Dublin and Belfast are corrected by the exclusion of deaths of non-residents occurring in public institutions.

TABLE 2 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for the previous year.

TABLE 3 is a summary of cases of certain specified infectious diseases in England and Wales notifiable under the general law or under orders made by the Local Government Board or Minister of Health and is based upon weekly returns received from the Medical Officers of Health of all Local (and Port) Health Authorities.

The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are *omitted* from this Summary.

TABLE 3A is similar to Table 3, but relates to the returns received too late for inclusion in Table 3 of the previous week. It includes revised figures for England and Wales as a whole for that week.

TABLE 4 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for the previous year.

TABLE 5 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 6 is a Report of the meteorological observations taken at Greenwich on each day of the week.

Summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, are published in the Registrar-General's Quarterly Return and the Statistical Review (Part I).

## NOTES FOR THE WEEK ENDED 16th JULY, 1938

### BIRTHS AND DEATHS.

In the 126 County Boroughs and Great Towns of England and Wales the live births registered in the twenty-eighth week of the year numbered 6,907 corresponding to an annual rate of 17.0 per 1,000 living: stillbirths numbered 254 corresponding to a rate of 35 per 1,000 total births registered (including stillborn): the deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 3,856 (5 more than in the preceding week).

Infant mortality based on the average weekly number of live births during the last 52 weeks, was 48 against 49, 46 and 49 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,285 live births registered corresponding to an annual rate of 16.4 per 1,000 living: stillbirths numbered 32 corresponding to a rate of 24 per 1,000 total births (including stillborn): the deaths (excluding stillbirths) numbered 686 (15 less than in the preceding week): infant mortality, based on the average weekly number of live births during the last 52 weeks, was 36, against 37, 42 and 52 in the preceding three weeks.

Table 3.—Notifications of Infectious Diseases.

Number of cases notified in the week ended 16th July, 1938, in Administrative Areas and Port Health Districts with Summary for England and Wales

*Note.*—Where no return has been received a \* is inserted in the columns. Totals shown against the names of Counties include any associated County Boroughs. The letters in the last column denote the following diseases :—A, Cholera ; B, Plague ; C, Puerperal fever (London A. C. only) ; D, Cerebro-spinal fever ; E, Acute poliomyelitis ; F, Acute poli-encephalitis ; G, Acute encephalitis lethargica ; H, Typhus fever ; I, Relapsing fever ; J, Continued fever (London A. C. only) ; L, Dysentery ; M, Ophthalmia neonatorum ; N, Puerperal pyrexia†.

† By virtue of the Public Health Act, 1936, in all areas outside London A. C., conditions notifiable as puerperal fever prior to the 1st October, 1937, are, from that date, notifiable as and included with notifications of puerperal pyrexia.

Summary.

	Small-pox.	Scarlet fever.	Diphtheria.	Enteric (typhoid and paratyphoid) fever.	Acute pneumonia (primary or influenzal).	Cholera.	Plague.	Puerperal fever. (London A. C. only).	Cerebro-spinal fever.	Acute poliomyelitis.	Acute poli-encephalitis.	Acute encephalitis lethargica.	Typhus fever.	Relapsing fever.	Continued fever. (London A. C. only).	Dysentery.	Ophthalmia neonatorum.	Puerperal pyrexia.†

\* The figures in this Table relate to the areas as constituted at the date of the weekly returns no corrections having been made for changes in boundary. The live births are derived from the weekly returns furnished by the Registrars and differ from those published for the towns in the Quarterly Return which are corrected for births occurring away from the usual residence of the parents.

† The figures for the Great Towns in the weekly columns relate to 126 Towns. The comparable totals for the years 1937 and 1938 in the last two columns, are in respect of 122 Towns to the end of March and 124 Towns thereafter.

Table 5.—Meteorology in certain Towns during the Week ended Saturday, 16th July, 1938.

JULY, 1938.					
Sunday	10		1.2	16.4	Cloudy till 8h., then overcast generally. Slight showers 9h. till 10h.
Monday	11		4.3	16.3	Overcast or nearly so. Cloudy period 14h. till 20h.
Tuesday	12		0.4	16.3	Overcast or nearly so. Occasional slight rain 9h. till 12h.
Wednesday	13		9.1	16.3	Overcast till 5h., few clouds by 6h., generally cloudy 11h. till 19h., cloudless by 20h.
Thursday	14	Discontinued.	1.0	16.2	Cloudless, becoming overcast or nearly so by 0h.
Friday	15		0.2	16.2	Overcast generally. Slight drizzle 9h. till 12h., then rain or slight rain till 14h. Occasional rain 17h. till 19h.
Saturday	16		2.7	16.2	Overcast generally. Slight rain about 14h., and occasional slight rain or damping from 17h.
No. of Column		25	Sum 18.9	Sum 113.9	

The results apply to the Civil Day, or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 132 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "higher," and - "lower" than the average.

The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined. The numbers in column 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *brilliant* sunshine on each day.

The reading of the barometer decreased from 29.97 ins. at the beginning of the week to 29.58 ins. by 4h. on July 12th; increased to 29.91 ins. by 22h. on July 13th; decreased to 29.77 ins. by 15h. on July 15th; increased and was 29.99 ins. by midnight on July 16th.

# The Guide to Current Official Statistics

It is the aim of the Permanent Consultative Committee on Official Statistics, in issuing this Annual Guide, to direct the enquirer to all current official publications that contain statistics bearing on his subject, and especially to inform him of the nature of the statistics he will find in the volume to which he is referred. The Guide embraces two distinct sections (i) a Subject Index and (ii) a List of Publications. It covers the whole of the statistical information contained in publications issued by Government Departments in Great Britain and Northern Ireland and is a work of obvious utility.

## CENSUS OF ENGLAND AND WALES, 1931

Census volumes in respect of the counties of England and Wales have now been published.

Parts I of the series, which are complete, relate to the areas as constituted at the date of the Census. Parts II will deal with the changes in boundary effected by County schemes under the Local Government Act of 1929, and will provide a limited range of statistics in respect of the newly constituted areas.

Sectional volumes presenting the results of the census of industries, occupations, etc. are also available, and particulars will be furnished on application.

# EPIDEMICS IN SCHOOLS

MEDICAL RESEARCH COUNCIL

SPECIAL REPORT No. 227

School communities offer somewhat special facilities for the investigation of epidemic and other illnesses and during the last seven years a Committee appointed by the Medical Research Council has been investigating the subject from both scientific and practical standpoints.

Although the Committee responsible for the report declare that their investigations throw no light on the question of why an epidemic spreads, nor on the factors favouring limitation of an outbreak, their careful study based on data collected over five years throws a great deal of light on the problem of school infections generally. It shows the present position in schools by means of a detailed statistical analysis (illustrating for example the often marked differences between the health record in schools for boys and for girls) and points to the important problems still unsolved and indicates how they may best be tackled.

## EXPLANATORY STATEMENT

TABLE I shows, for London and the County Boroughs and those urban districts with resident populations exceeding 50,000 at the last Census, the number of births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday. The births relate to those registered in the area, but include births occurring in municipal maternity hospitals situate outside the area to which they belong.

The deaths are exclusive of non-residents but corrected as far as possible by the inclusion of deaths of residents in other areas. The deaths in Edinburgh and Glasgow are fully corrected for non-residents; those in Dublin and Belfast are corrected by the exclusion of deaths of non-residents occurring in public institutions.

TABLE 2 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for the previous year.

TABLE 3 is a summary of cases of certain specified infectious diseases in England and Wales notifiable under the general law or under orders made by the Local Government Board or Minister of Health and is based upon weekly returns received from the Medical Officers of Health of all Local (and Port) Health Authorities.

The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are *omitted* from this Summary.

TABLE 3A is similar to Table 3, but relates to the returns received too late for inclusion in Table 3 of the previous week. It includes revised figures for England and Wales as a whole for that week.

TABLE 4 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for the previous year.

TABLE 5 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 6 is a Report of the meteorological observations taken at Greenwich on each day of the week.

Summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, are published in the Registrar-General's Quarterly Return and the Statistical Review (Part I).

## NOTES FOR THE WEEK ENDED 23rd JULY, 1938

### BIRTHS AND DEATHS.

In the 126 County Boroughs and Great Towns of England and Wales the live births registered in the twenty-ninth week of the year numbered 6,979 corresponding to an annual rate of 17.1 per 1,000 living: stillbirths numbered 258 corresponding to a rate of 36 per 1,000 total births registered (including stillborn): the deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 3,853 (3 less than in the preceding week).

Infant mortality based on the average weekly number of live births during the last 52 weeks, was 45 against 46, 49 and 48 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,275 live births registered corresponding to an annual rate of 16.2 per 1,000 living: stillbirths numbered 42 corresponding to a rate of 32 per 1,000 total births (including stillborn): the deaths (excluding stillbirths) numbered 678 (8 less than in the preceding week): infant mortality, based on the average weekly number of live births during the last 52 weeks, was 43, against 42, 52 and 36 in the preceding three weeks.

Table 3.—Notifications of Infectious Diseases.

Number of cases notified in the week ended 23rd July, 1938, in Administrative Areas and Port Health Districts with Summary for England and Wales.

*Note.*—Where no return has been received a \* is inserted in the columns. Totals shown against the names of Counties include any associated County Boroughs. The letters in the last column denote the following diseases:—A, Cholera; B, Plague; C, Puerperal fever (London A. C. only); D, Cerebro-spinal fever; E, Acute poliomyelitis; F, Acute poliomyelitis; G, Acute encephalitis lethargica; H, Typhus fever; I, Relapsing fever; J, Continued fever (London A. C. only); L, Dysentery; M, Ophthalmia neonatorum; N, Puerperal pyrexia†.

† By virtue of the Public Health Act, 1936, in all areas outside London A. C., conditions notifiable as puerperal fever prior to the 1st October, 1937, are, from that date, notifiable as and included with notifications of puerperal pyrexia.

## Summary.

	Small-pox.	Scarlet fever.	Diphtheria.	Enteric (typhoid and paratyphoid) fever.	Acute pneumonia (primary or influenzal).	Cholera.	Plague.	Puerperal fever. (London A. C. only).	Cerebro-spinal fever.	Acute poliomyelitis.	Acute polioencephalitis.	Acute encephalitis lethargica.	Typhus fever.	Relapsing fever.	Continued fever. (London A. C. only).	Dysentery.	Ophthalmia neonatorum.	Puerperal pyrexia.†

\* The figures in this Table relate to the areas as constituted at the date of the weekly returns no corrections having been made for changes in boundary. The live births are derived from the weekly returns furnished by the Registrars and differ from those published for the towns in the Quarterly Return which are corrected for births occurring away from the usual residence of the parents.

† The figures for the Great Towns in the weekly columns relate to 126 Towns. The comparable totals for the years 1937 and 1938 in the last two columns, are in respect of 122 Towns to the end of March and 124 Towns thereafter.

**Table 5.—Meteorology in certain Towns during the Week ended Saturday, 23rd July, 1938.**

DATE.		ATMOSPHERIC ELECTRICITY. (For explanation of symbols, <i>see</i> Note.)	Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
JULY, 1938.					
Sunday	17		8.2	16.2	Overcast till 3h., very cloudy till 18h., then overcast. Slight showers at 18h. and 18½h.
Monday	18		0.2	16.1	Overcast till 18h., partially cloudy till 21½h., then overcast. Rain at 3½h. and 4½h.
Tuesday	19		10.4	16.1	Overcast till 2h., then partially cloudy generally. Few clouds 12h. till 21h., then cloudless. Dew at night.
Wednesday	20	Discontinued.	7.3	16.0	Cloudless till 3h., overcast by 4h. Little cloud 11½h. till 18h., cloudy by 19h. Slight haze during day.
Thursday	21		1.6	16.0	Cloudy till 3h., then nearly overcast. Slight haze during day.
Friday	22		0.4	15.9	Overcast generally till 21h., then variably cloudy.
Saturday	23		3.6	15.9	Cloudy till 1h., then overcast from 9h. till 12h., then few clouds, Very cloudy, thin cloud, from 16h.
			Sum 31.7	Sum 112.2	
No. of Column		25	26	27	

The results apply to the Civil Day, or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1903, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "higher" and - "lower" than the average.

The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined.

The numbers in column 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer increased from 29.99 ins. at the beginning of the week to 30.05 ins. by 9h. on July 18th; decreased generally and was 29.78 ins by midnight on July 23rd.

## CENSUS OF ENGLAND AND WALES, 1931

Census volumes in respect of the counties of England and Wales have now been published.

Parts I of the series, which are complete, relate to the areas as constituted at the date of the Census. Parts II will deal with the changes in boundary effected by County schemes under the Local Government Act of 1929, and will provide a limited range of statistics in respect of the newly constituted areas.

Sectional volumes presenting the results of the census of industries, occupations, etc. are also available, and particulars will be furnished on application.

# EPIDEMICS IN SCHOOLS

MEDICAL RESEARCH COUNCIL

SPECIAL REPORT No. 227

School communities offer somewhat special facilities for the investigation of epidemic and other illnesses and during the last seven years a Committee appointed by the Medical Research Council has been investigating the subject from both scientific and practical standpoints.

Although the Committee responsible for the report declare that their investigations throw no light on the question of why an epidemic spreads, nor on the factors favouring limitation of an outbreak, their careful study based on data collected over five years throws a great deal of light on the problem of school infections generally. It shows the present position in schools by means of a detailed statistical analysis (illustrating for example the often marked differences between the health record in schools for boys and for girls) and points to the important problems still unsolved and indicates how they may best be tackled.

## EXPLANATORY STATEMENT

TABLE I shows, for London and the County Boroughs and those urban districts with resident populations exceeding 50,000 at the last Census, the number of births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday. The births relate to those registered in the area, but include births occurring in municipal maternity hospitals situate outside the area to which they belong.

The deaths are exclusive of non-residents but corrected as far as possible by the inclusion of deaths of residents in other areas. The deaths in Edinburgh and Glasgow are fully corrected for non-residents; those in Dublin and Belfast are corrected by the exclusion of deaths of non-residents occurring in public institutions.

TABLE 2 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for the previous year.

TABLE 3 is a summary of cases of certain specified infectious diseases in England and Wales notifiable under the general law or under orders made by the Local Government Board or Minister of Health and is based upon weekly returns received from the Medical Officers of Health of all Local (and Port) Health Authorities.

The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are *omitted* from this Summary.

TABLE 3A is similar to Table 3, but relates to the returns received too late for inclusion in Table 3 of the previous week. It includes revised figures for England and Wales as a whole for that week.

TABLE 4 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for the previous year.

TABLE 5 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 6 is a Report of the meteorological observations taken at Greenwich on each day of the week.

Summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, are published in the Registrar-General's Quarterly Return and the Statistical Review (Part I).

## NOTES FOR THE WEEK ENDED 30th JULY, 1938

### BIRTHS AND DEATHS.

In the 126 County Boroughs and Great Towns of England and Wales the live births registered in the thirtieth week of the year numbered 6,819 corresponding to an annual rate of 16.8 per 1,000 living: stillbirths numbered 249 corresponding to a rate of 35 per 1,000 total births registered (including stillborn): the deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 3,814 (23 less than in the preceding week).

Infant mortality based on the average weekly number of live births during the last 52 weeks, was 45 against 49, 48 and 45 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,248 live births registered corresponding to an annual rate of 15.9 per 1,000 living: stillbirths numbered 33 corresponding to a rate of 26 per 1,000 total births (including stillborn): the deaths (excluding stillbirths) numbered 718 (40 more than in the preceding week): infant mortality, based on the average weekly number of live births during the last 52 weeks, was 40, against 52, 36 and 43 in the preceding three weeks.

**Table 3.—Notifications of Infectious Diseases.**

**Number of cases notified in the week ended 30th July, 1938, in Administrative Areas and Port Health Districts with Summary for England and Wales.**

*Note.*—Where no return has been received a \* is inserted in the columns. Totals shown against the names of Counties include any associated County Boroughs. The letters in the last column denote the following diseases:—A, Cholera; B, Plague; C, Puerperal fever (London A. C. only); D, Cerebro-spinal fever; E, Acute poliomyelitis; F, Acute poli-encephalitis; G, Acute encephalitis lethargica; H, Typhus fever; I, Relapsing fever; J, Continued fever (London A. C. only); L, Dysentery; M, Ophthalmia neonatorum; N, Puerperal pyrexia†.

† By virtue of the Public Health Act, 1936, in all areas outside London A. C., conditions notifiable as puerperal fever prior to the 1st October, 1937, are, from that date, notifiable as and included with notifications of puerperal pyrexia.

**Summary.**

	Small-pox.	Scarlet fever.	Diphtheria.	Enteric (typhoid and paratyphoid) fever.	Acute pneumonia (primary or influenzal).	Cholera.	Plague.	Puerperal fever. (London A. C. only).	Cerebro-spinal fever.	Acute poliomyelitis.	Acute poli-encephalitis.	Acute encephalitis lethargica.	Typhus fever.	Relapsing fever.	Continued fever. (London A. C. only).	Dysentery.	Ophthalmia neonatorum.	Puerperal pyrexia.†

\* The figures in this Table relate to the areas as constituted at the date of the weekly returns no corrections having been made for changes in boundary. The live births are derived from the weekly returns furnished by the Registrars and differ from those published for the towns in the Quarterly Return which are corrected for births occurring away from the usual residence of the parents.

† The figures for the Great Towns in the weekly columns relate to 126 Towns. The comparable totals for the years 1937 and 1938 in the last two columns, are in respect of 122 Towns to the end of March and 124 Towns thereafter.

			26	27	

The results apply to the Civil Day, or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "higher," and - "lower," than the average.

The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined.

The numbers in column 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer decreased from 29.78 ins. at the beginning of the week to 29.63 ins. by 3h. on July 26th; increased to 29.87 ins. by 8h. on July 27th; decreased to 29.67 ins. by 9h. on July 28th; increased generally and was 29.90 ins. by midnight on July 30th.

## CENSUS OF ENGLAND AND WALES, 1931

Census volumes in respect of the counties of England and Wales have now been published.

Parts I of the series, which are complete, relate to the areas as constituted at the date of the Census. Parts II will deal with the changes in boundary effected by County schemes under the Local Government Act of 1929, and will provide a limited range of statistics in respect of the newly constituted areas.

Sectional volumes presenting the results of the census of industries, occupations, etc. are also available, and particulars will be furnished on application.

# EPIDEMICS IN SCHOOLS

MEDICAL RESEARCH COUNCIL

SPECIAL REPORT No. 227

School communities offer somewhat special facilities for the investigation of epidemic and other illnesses and during the last seven years a Committee appointed by the Medical Research Council has been investigating the subject from both scientific and practical standpoints.

Although the Committee responsible for the report declare that their investigations throw no light on the question of why an epidemic spreads, nor on the factors favouring limitation of an outbreak, their careful study based on data collected over five years throws a great deal of light on the problem of school infections generally. It shows the present position in schools by means of a detailed statistical analysis (illustrating for example the often marked differences between the health record in schools for boys and for girls) and points to the important problems still unsolved and indicates how they may best be tackled.

## EXPLANATORY STATEMENT

TABLE I shows, for London and the County Boroughs and those urban districts with resident populations exceeding 50,000 at the last Census, the number of births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday. The births relate to those registered in the area, but include births occurring in municipal maternity hospitals situate outside the area to which they belong.

The deaths are exclusive of non-residents but corrected as far as possible by the inclusion of deaths of residents in other areas. The deaths in Edinburgh and Glasgow are fully corrected for non-residents; those in Dublin and Belfast are corrected by the exclusion of deaths of non-residents occurring in public institutions.

TABLE 2 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for the previous year.

TABLE 3 is a summary of cases of certain specified infectious diseases in England and Wales notifiable under the general law or under orders made by the Local Government Board or Minister of Health and is based upon weekly returns received from the Medical Officers of Health of all Local (and Port) Health Authorities.

The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are *omitted* from this Summary.

TABLE 3A is similar to Table 3, but relates to the returns received too late for inclusion in Table 3 of the previous week. It includes revised figures for England and Wales as a whole for that week.

TABLE 4 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for the previous year.

TABLE 5 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 6 is a Report of the meteorological observations taken at Greenwich on each day of the week.

Summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, are published in the Registrar-General's Quarterly Return and the Statistical Review (Part I).

## NOTES FOR THE WEEK ENDED 6th AUGUST, 1938

### BIRTHS AND DEATHS.

In the 126 County Boroughs and Great Towns of England and Wales the live births registered in the thirty-first week of the year numbered 5,953 corresponding to an annual rate of 14.6 per 1,000 living: stillbirths numbered 258 corresponding to a rate of 42 per 1,000 total births registered (including stillborn): the deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 3,809 (5 less than in the preceding week).

Infant mortality based on the average weekly number of live births during the last 52 weeks, was 41 against 48, 45 and 45 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,115 live births registered corresponding to an annual rate of 14.2 per 1,000 living: stillbirths numbered 46 corresponding to a rate of 40 per 1,000 total births (including stillborn): the deaths (excluding stillbirths) numbered 691 (27 less than in the preceding week): infant mortality, based on the average weekly number of live births during the last 52 weeks, was 35, against 36, 43 and 40 in the preceding three weeks.

**Table 3.—Notifications of Infectious Diseases.**

**Number of cases notified in the week ended 6th August, 1938, in Administrative Areas and Port Health Districts with Summary for England and Wales**

*Note.*—Where no return has been received a \* is inserted in the columns. Totals shown against the names of Counties include any associated County Boroughs. The letters in the last column denote the following diseases:—A, Cholera; B, Plague; C, Puerperal fever (London A. C. only); D, Cerebro-spinal fever; E, Acute poliomyelitis; F, Acute polio-encephalitis; G, Acute encephalitis lethargica; H, Typhus fever; I, Relapsing fever; J, Continued fever (London A. C. only); L, Dysentery; M, Ophthalmia neonatorum; N, Puerperal pyrexia†.

† By virtue of the Public Health Act, 1936, in all areas outside London A. C., conditions notifiable as puerperal fever prior to the 1st October, 1937, are, from that date, notifiable as and included with notifications of puerperal pyrexia.

**Summary.**

		Small-pox.	Scarlet fever.	Diphtheria.	Enteric (typhoid and paratyphoid) fever.	Acute pneumonia (primary or influenzal).	Cholera.	Plague.	Puerperal fever (London A. C. only).	Cerebro-spinal fever.	Acute poliomyelitis.	Acute polioencephalitis.	Acute encephalitis lethargica.	Typhus fever.	Relapsing fever	Continued fever (London A. C. only).	Dysentery.	Ophthalmia neonatorum.	Puerperal pyrexia.†

\* The figures in this Table relate to the areas as constituted at the date of the weekly returns no corrections having been made for changes in boundary. The live births are derived from the weekly returns furnished by the Registrars and differ from those published for the towns in the Quarterly Return which are corrected for births occurring away from the usual residence of the parents.

† The figures for the Great Towns in the weekly columns relate to 126 Towns. The comparable totals for the years 1937 and 1938 in the last two columns, are in respect of 122 Towns to the end of March and 124 Towns thereafter.

Table 5.—Meteorology in certain Towns during the Week ended Saturday, 6th August, 1938.

Saturday	... 6		5.5	15.2	Nearly overcast till 10h., cloudy till 17h., then nearly overcast. Cloudy from 20 <sup>th</sup> .
No. of Column		25	Sum 53.6	Sum 107.4	
			26	27	

The results apply to the Civil Day, or from midnight to midnight, Greenwich Mean Time. The height of the column of the barometer is 132 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1903, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "higher" and - "lower" than the average.

The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined.

The numbers in column 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine on each day.

The reading of the barometer increased from 29.90 ins. at the beginning of the week to 30.11 ins. by 23h. on Aug. 1st; decreased generally and was 29.77 ins. by midnight on Aug. 6th.

# EPIDEMICS IN SCHOOLS

MEDICAL RESEARCH COUNCIL

SPECIAL REPORT No. 227

School communities offer somewhat special facilities for the investigation of epidemic and other illnesses and during the last seven years a Committee appointed by the Medical Research Council has been investigating the subject from both scientific and practical standpoints.

Although the Committee responsible for the report declare that their investigations throw no light on the question of why an epidemic spreads, nor on the factors favouring limitation of an outbreak, their careful study based on data collected over five years throws a great deal of light on the problem of school infections generally. It shows the present position in schools by means of a detailed statistical analysis (illustrating for example the often marked differences between the health record in schools for boys and for girls) and points to the important problems still unsolved and indicates how they may best be tackled.

## CENSUS OF ENGLAND AND WALES, 1931

Census volumes in respect of the counties of England and Wales have now been published.

Parts I of the series, which are complete, relate to the areas as constituted at the date of the Census. Parts II will deal with the changes in boundary effected by County schemes under the Local Government Act of 1929, and will provide a limited range of statistics in respect of the newly constituted areas.

Sectional volumes presenting the results of the census of industries, occupations, etc. are also available, and particulars will be furnished on application.

# BETTER HEALTH

Whitefriars House, 68, Fleet Street, London, E.C.4.

The Official Journal of the Central Council for Health Education. It is intended to carry simple, non-technical and accurate teaching on the prevention of disease into the homes of the people. With the assistance of upwards of 150 health departments, the circulation has now reached 300,000 copies per month.

Quantities are supplied at special prices for local distribution. Write for specimen copy and particulars.

## Report on Anti-Venereal Measures in Certain Scandinavian Countries and Holland

MINISTRY OF HEALTH. (REPORTS ON  
PUBLIC HEALTH AND MEDICAL SUBJECTS  
No. 83)

Discusses the conditions found in Denmark, Norway and Sweden where measures provide for notification and some degree of compulsion of infected persons to submit to treatment, and in Holland where there is neither notification nor compulsory treatment. An account is given of such geographical and social factors as might have a bearing on the spread of the disease and of the relative laws and measures in operation.

## EXPLANATORY STATEMENT

TABLE I shows, for London and the County Boroughs and those urban districts with resident populations exceeding 50,000 at the last Census, the number of births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday. The births relate to those registered in the area, but include births occurring in municipal maternity hospitals situate outside the area to which they belong.

The deaths are exclusive of non-residents but corrected as far as possible by the inclusion of deaths of residents in other areas. The deaths in Edinburgh and Glasgow are fully corrected for non-residents; those in Dublin and Belfast are corrected by the exclusion of deaths of non-residents occurring in public institutions.

TABLE 2 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for the previous year.

TABLE 3 is a summary of cases of certain specified infectious diseases in England and Wales notifiable under the general law or under orders made by the Local Government Board or Minister of Health and is based upon weekly returns received from the Medical Officers of Health of all Local (and Port) Health Authorities.

The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are *omitted* from this Summary.

TABLE 3A is similar to Table 3, but relates to the returns received too late for inclusion in Table 3 of the previous week. It includes revised figures for England and Wales as a whole for that week.

TABLE 4 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for the previous year.

TABLE 5 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 6 is a Report of the meteorological observations taken at Greenwich on each day of the week.

Summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, are published in the Registrar-General's Quarterly Return and the Statistical Review (Part I).

## NOTES FOR THE WEEK ENDED 13th AUGUST, 1938

### BIRTHS AND DEATHS.

In the 126 County Boroughs and Great Towns of England and Wales the live births registered in the thirty-second week of the year numbered 6,813 corresponding to an annual rate of 16.7 per 1,000 living: stillbirths numbered 278 corresponding to a rate of 39 per 1,000 total births registered (including stillborn): the deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 3,735 (74 less than in the preceding week).

Infant mortality based on the average weekly number of live births during the last 52 weeks, was 41 against 45, 45 and 41 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,311 live births registered corresponding to an annual rate of 16.7 per 1,000 living: stillbirths numbered 30 corresponding to a rate of 22 per 1,000 total births (including stillborn): the deaths (excluding stillbirths) numbered 687 (4 less than in the preceding week): infant mortality, based on the average weekly number of live births during the last 52 weeks, was 29, against 43, 40 and 35 in the preceding three weeks.

Table 3.—Notifications of Infectious Diseases.

Number of cases notified in the week ended 13th August, 1938, in Administrative Areas and Port Health Districts with Summary for England and Wales

*Note.*—Where no return has been received a \* is inserted in the columns. Totals shown against the names of Counties include any associated County Boroughs. The letters in the last column denote the following diseases :—A, Cholera; B, Plague; C, Puerperal fever (London A. C. only); D, Cerebro-spinal fever; E, Acute poliomyelitis; F, Acute polio-encephalitis; G, Acute encephalitis lethargica; H, Typhus fever; I, Relapsing fever; J, Continued fever (London A. C. only); L, Dysentery; M, Ophthalmia neonatorum; N, Puerperal pyrexia†.

† By virtue of the Public Health Act, 1936, in all areas outside London A. C., conditions notifiable as puerperal fever prior to the 1st October, 1937, are, from that date, notifiable as and included with notifications of puerperal pyrexia.

## Summary.

	Small-pox.	Scarlet fever.	Diphtheria.	Enteric (typhoid and paratyphoid) fever.	Acute pneumonia (primary or influenzal).	Cholera.	Plague.	Puerperal fever (London A. C. only).	Cerebro-spinal fever.	Acute poliomyelitis.	Acute polioencephalitis.	Acute encephalitis lethargica.	Typhus fever.	Relapsing fever.	Continued fever (London A. C. only).	Dysentery.	Ophthalmia neonatorum.	Puerperal pyrexia.†

\* The figures in this Table relate to the areas as constituted at the date of the weekly returns no corrections having been made for changes in boundary. The live births are derived from the weekly returns furnished by the Registrars and differ from those published for the towns in the Quarterly Return which are corrected for births occurring away from the usual residence of the parents.

† The figures for the Great Towns in the weekly columns relate to 126 Towns. The comparable totals for the years 1937 and 1938 in the last two columns, are in respect of 122 Towns to the end of March and 124 Towns thereafter.

**Table 5.—Meteorology in certain Towns during the Week ended Saturday, 13th August, 1938.**

The results apply to the Civil Day, or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "higher" and - "lower" than the average.

The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined.

The numbers in column 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine on each day.

The reading of the barometer decreased from 29.77 ins. at the beginning of the week to 29.71 ins. by 5h. on Aug. 8th; increased to 29.80 ins. by 22h. on Aug. 9th; decreased generally to 29.70 ins. by 18h. on Aug. 13th; increased and was 29.73 ins. by midnight on the same day.

# EPIDEMICS IN SCHOOLS

MEDICAL RESEARCH COUNCIL

SPECIAL REPORT No. 227

School communities offer somewhat special facilities for the investigation of epidemic and other illnesses and during the last seven years a Committee appointed by the Medical Research Council has been investigating the subject from both scientific and practical standpoints.

Although the Committee responsible for the report declare that their investigations throw no light on the question of why an epidemic spreads, nor on the factors favouring limitation of an outbreak, their careful study based on data collected over five years throws a great deal of light on the problem of school infections generally. It shows the present position in schools by means of a detailed statistical analysis (illustrating for example the often marked differences between the health record in schools for boys and for girls) and points to the important problems still unsolved and indicates how they may best be tackled.

## CENSUS OF ENGLAND AND WALES, 1931

Census volumes in respect of the counties of England and Wales have now been published.

Parts I of the series, which are complete, relate to the areas as constituted at the date of the Census. Parts II will deal with the changes in boundary effected by County schemes under the Local Government Act of 1929, and will provide a limited range of statistics in respect of the newly constituted areas.

Sectional volumes presenting the results of the census of industries, occupations, etc. are also available, and particulars will be furnished on application.

# BETTER HEALTH

Whitefriars House, 68, Fleet Street, London, E.C.4.

The Official Journal of the Central Council for Health Education. It is intended to carry simple, non-technical and accurate teaching on the prevention of disease into the homes of the people. With the assistance of upwards of 150 health departments, the circulation has now reached 300,000 copies per month.

Quantities are supplied at special prices for local distribution. Write for specimen copy and particulars.

## Report on Anti-Venereal Measures in Certain Scandinavian Countries and Holland

MINISTRY OF HEALTH. (REPORTS ON  
PUBLIC HEALTH AND MEDICAL SUBJECTS  
No. 83)

Discusses the conditions found in Denmark, Norway and Sweden where measures provide for notification and some degree of compulsion of infected persons to submit to treatment, and in Holland where there is neither notification nor compulsory treatment. An account is given of such geographical and social factors as might have a bearing on the spread of the disease and of the relative laws and measures in operation.

## EXPLANATORY STATEMENT

TABLE I shows, for London and the County Boroughs and those urban districts with resident populations exceeding 50,000 at the last Census, the number of births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday. The births relate to those registered in the area, but include births occurring in municipal maternity hospitals situate outside the area to which they belong.

The deaths are exclusive of non-residents but corrected as far as possible by the inclusion of deaths of residents in other areas. The deaths in Edinburgh and Glasgow are fully corrected for non-residents; those in Dublin and Belfast are corrected by the exclusion of deaths of non-residents occurring in public institutions.

TABLE 2 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for the previous year.

TABLE 3 is a summary of cases of certain specified infectious diseases in England and Wales notifiable under the general law or under orders made by the Local Government Board or Minister of Health and is based upon weekly returns received from the Medical Officers of Health of all Local (and Port) Health Authorities.

The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

TABLE 3A is similar to Table 3, but relates to the returns received too late for inclusion in Table 3 of the previous week. It includes revised figures for England and Wales as a whole for that week.

TABLE 4 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for the previous year.

TABLE 5 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 6 is a Report of the meteorological observations taken at Greenwich on each day of the week.

Summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, are published in the Registrar-General's Quarterly Return and the Statistical Review (Part I).

## NOTES FOR THE WEEK ENDED 20th AUGUST, 1938

### BIRTHS AND DEATHS.

In the 126 County Boroughs and Great Towns of England and Wales the live births registered in the thirty-third week of the year numbered 7,098 corresponding to an annual rate of 17.4 per 1,000 living: stillbirths numbered 235 corresponding to a rate of 32 per 1,000 total births registered (including stillborn): the deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 3,643, 91 less than in the preceding week).

Infant mortality based on the average weekly number of live births during the last 52 weeks, was 47 against 45, 41 and 41 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,376 live births registered corresponding to an annual rate of 17.5 per 1,000 living: stillbirths numbered 31 corresponding to a rate of 22 per 1,000 total births (including stillborn): the deaths (excluding stillbirths) numbered 664 (23 less than in the preceding week): infant mortality, based on the average weekly number of live births during the last 52 weeks, was 41, against 40, 35 and 29 in the preceding three weeks.

**Table 3.—Notifications of Infectious Diseases.**

**Number of cases notified in the week ended 20th August, 1938, in Administrative Areas and Port Health Districts with Summary for England and Wales.**

*Note.*—Where no return has been received a \* is inserted in the columns. Totals shown against the names of Counties include any associated County Boroughs. The letters in the last column denote the following diseases :—A, Cholera ; B, Plague ; C, Puerperal fever (London A. C. only) ; D, Cerebro-spinal fever ; E, Acute poliomyelitis ; F, Acute polio-encephalitis ; G, Acute encephalitis lethargica ; H, Typhus fever ; I, Relapsing fever ; J, Continued fever (London A. C. only) ; L, Dysentery ; M, Ophthalmia neonatorum ; N, Puerperal pyrexia†.

† By virtue of the Public Health Act, 1936, in all areas outside London A. C., conditions notifiable as puerperal fever prior to the 1st October, 1937, are, from that date, notifiable as and included with notifications of puerperal pyrexia.

**Summary.**

		Small-pox.	Scarlet fever.	Diphtheria.	Enteric (typhoid and paratyphoid) fever.	Acute pneumonia (primary or influenzal).	Cholera.	Plague.	Puerperal fever (London A. C. only).	Cerebro-spinal fever.	Acute poliomyelitis.	Acute polioencephalitis.	Acute encephalitis lethargica.	Typhus fever.	Relapsing fever.	Continued fever (London A. C. only).	Dysentery.	Ophthalmia neonatorum.	Puerperal pyrexia.†

\* The figures in this Table relate to the areas as constituted at the date of the weekly returns no corrections having been made for changes in boundary. The live births are derived from the weekly returns furnished by the Registrars and differ from those published for the towns in the Quarterly Return which are corrected for births occurring away from the usual residence of the parents.

† The figures for the Great Towns in the weekly columns relate to 126 Towns. The comparable totals for the years 1937 and 1938 in the last two columns, are in respect of 122 Towns to the end of March and 124 Towns thereafter.

Table 5.—Meteorology in certain Towns during the Week ended Saturday, 20th August, 1938.

August, 1938.					
Sunday	14		0 0	14.7	Overcast or nearly so. Slight rain about 6 $\frac{1}{2}$ h.
Monday	15		6.1	14.7	Generally cloudy till 18h., nearly cloudless by 19h. Clouding from 22h., overcast by 23h. Mist and dew in morning.
Tuesday	16		2.9	14.6	Overcast or nearly so. Slight rain 10h. till 11h.
Wednesday	17		5.3	14.6	Overcast or nearly so till 11 $\frac{1}{2}$ h., very cloudy till 18h., few clouds by 19h. Lunar halo from 23 $\frac{1}{2}$ h.
Thursday	18	Discontinued.	6.3	14.5	Partially cloudy till 4h., then very cloudy generally. Lunar halo till 1 $\frac{1}{2}$ h.
Friday	19		1.3	14.4	Cloudy till 7h., overcast till 14 $\frac{1}{2}$ h., then very cloudy. Rain 11 $\frac{1}{2}$ h. till 12 $\frac{1}{2}$ h., then slight rain till 13h.
Saturday	20		3.9	14.4	Generally cloudy. Heavy shower about 15 $\frac{1}{2}$ h.
No. of Column		25	Sum 25.8	Sum 101.9	

The results apply to the Civil Day or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.	Observations are usually taken at 0h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 30 years ending 1903. With the corrected mean readings of the dry bulb thermometer and minimum thermometers, forming the mean daily value of the maximum and minimum of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.	The average temperature of the air is that derived from a discussion of the observations made at of the air from a discussion of the anemometric records for the 30 years ending 1916. In reading columns 8 and 23 it will be borne in mind that the indices "higher" and "lower" than the average.	The values given in column 16 are not corrected for the index error of the thermometers which cannot be determined.	The numbers in column 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of <i>bright</i> sunshine on each day.	The reading of the barometer increased from 29.73 ins. at the beginning of the week to 29.82 ins. by 8h. on Aug. 15th; decreased to 29.57 ins. by 16 $\frac{1}{2}$ h. on Aug. 16th; increased to 29.82 ins. by 20 $\frac{1}{2}$ h. on Aug. 17th; decreased to 29.34 ins. by 15 $\frac{1}{2}$ h. on Aug. 19th; increased and was 29.68 ins. by midnight on Aug. 20th.
--	--	---	---	---	--

The results apply to the Civil Day, or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 132 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 6h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemographic records for the 50 years ending 1916. In reading columns 8 and 9 it will be borne in mind that "+" indicates "higher," and "-" "lower," than the average.

The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The numbers in column 20, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day. The reading of the barometer increased from 29.73 ins. at the beginning of the week to 29.84 ins. by 5h. on Aug. 13th; decreased to 29.31 ins. by 16h. on Aug. 16th; increased to 29.82 ins. by 20h. on Aug. 17th; decreased to 29.34 ins. by 15 $\frac{1}{2}$ h. on Aug. 19th; increased and was 29.68 ins. by midnight on Aug. 20th.

# The Guide to Current Official Statistics

It is the aim of the Permanent Consultative Committee on Official Statistics, in issuing this Annual Guide, to direct the enquirer to all current official publications that contain statistics bearing on his subject, and especially to inform him of the nature of the statistics he will find in the volume to which he is referred. The Guide embraces two distinct sections (i) a Subject Index and (ii) a List of Publications. It covers the whole of the statistical information contained in publications issued by Government Departments in Great Britain and Northern Ireland and is a work of obvious utility.

## CENSUS OF ENGLAND AND WALES, 1931

Census volumes in respect of the counties of England and Wales have now been published.

Parts I of the series, which are complete, relate to the areas as constituted at the date of the Census. Parts II will deal with the changes in boundary effected by County schemes under the Local Government Act of 1929, and will provide a limited range of statistics in respect of the newly constituted areas.

Sectional volumes presenting the results of the census of industries, occupations, etc. are also available, and particulars will be furnished on application.

# EPIDEMICS IN SCHOOLS

MEDICAL RESEARCH COUNCIL

SPECIAL REPORT No. 227

School communities offer somewhat special facilities for the investigation of epidemic and other illnesses and during the last seven years a Committee appointed by the Medical Research Council has been investigating the subject from both scientific and practical standpoints.

Although the Committee responsible for the report declare that their investigations throw no light on the question of why an epidemic spreads, nor on the factors favouring limitation of an outbreak, their careful study based on data collected over five years throws a great deal of light on the problem of school infections generally. It shows the present position in schools by means of a detailed statistical analysis (illustrating for example the often marked differences between the health record in schools for boys and for girls) and points to the important problems still unsolved and indicates how they may best be tackled.

## EXPLANATORY STATEMENT

TABLE I shows, for London and the County Boroughs and those urban districts with resident populations exceeding 50,000 at the last Census, the number of births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday. The births relate to those registered in the area, but include births occurring in municipal maternity hospitals situate outside the area to which they belong.

The deaths are exclusive of non-residents but corrected as far as possible by the inclusion of deaths of residents in other areas. The deaths in Edinburgh and Glasgow are fully corrected for non-residents; those in Dublin and Belfast are corrected by the exclusion of deaths of non-residents occurring in public institutions.

TABLE 2 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for the previous year.

TABLE 3 is a summary of cases of certain specified infectious diseases in England and Wales notifiable under the general law or under orders made by the Local Government Board or Minister of Health and is based upon weekly returns received from the Medical Officers of Health of all Local (and Port) Health Authorities.

The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are *omitted* from this Summary.

TABLE 3A is similar to Table 3, but relates to the returns received too late for inclusion in Table 3 of the previous week. It includes revised figures for England and Wales as a whole for that week.

TABLE 4 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for the previous year.

TABLE 5 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 6 is a Report of the meteorological observations taken at Greenwich on each day of the week.

Summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, are published in the Registrar-General's Quarterly Return and the Statistical Review (Part I).

## NOTES FOR THE WEEK ENDED 27th AUGUST, 1938

### BIRTHS AND DEATHS.

In the 126 County Boroughs and Great Towns of England and Wales the live births registered in the thirty-fourth week of the year numbered 6,721 corresponding to an annual rate of 16.5 per 1,000 living: stillbirths numbered 269 corresponding to a rate of 38 per 1,000 total births registered (including stillborn): the deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 3,728 (85 more than in the preceding week).

Infant mortality based on the average weekly number of live births during the last 52 weeks, was 46 against 41, 41, and 47 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,240 live births registered corresponding to an annual rate of 15.8 per 1,000 living: stillbirths numbered 38 corresponding to a rate of 30 per 1,000 total births (including stillborn): the deaths (excluding stillbirths) numbered 640 (24 less than in the preceding week): infant mortality, based on the average weekly number of live births during the last 52 weeks, was 31, against 35, 29, and 41 in the preceding three weeks.

**Table 3.—Notifications of Infectious Diseases.**

**Number of cases notified in the week ended 27th August, 1938, in Administrative Areas and Port Health Districts with Summary for England and Wales.**

*Note.*—Where no return has been received a \* is inserted in the columns. Totals shown against the names of Counties include any associated County Boroughs. The letters in the last column denote the following diseases :—A, Cholera; B, Plague; C, Puerperal fever (London A. C. only); D, Cerebro-spinal fever; E, Acute poliomyelitis; F, Acute poliomyelitis; G, Acute encephalitis lethargica; H, Typhus fever; I, Relapsing fever; J, Continued fever (London A. C. only); L, Dysentery; M, Ophthalmia neonatorum; N, Puerperal pyrexia†.

† By virtue of the Public Health Act, 1936, in all areas outside London A. C., conditions notifiable as puerperal fever prior to the 1st October, 1937, are, from that date, notifiable as and included with notifications of puerperal pyrexia.

**Summary.**

	Small-pox.	Scarlet fever.	Diphtheria.	Enteric (typhoid and paratyphoid) fever.	Acute pneumonia (primary or influenzal).	Cholera.	Plague.	Puerperal fever (London A. C. only).	Cerebro-spinal fever.	Acute poliomyelitis.	Acute polioencephalitis.	Acute encephalitis lethargica.	Typhus fever.	Relapsing fever.	Continued fever (London A. C. only).	Dysentery.	Ophthalmia neonatorum.	Puerperal pyrexia.†

\* The figures in this Table relate to the areas as constituted at the date of the weekly returns no corrections having been made for changes in boundary. The live births are derived from the weekly returns furnished by the Registrars and differ from those published for the towns in the Quarterly Return which are corrected for births occurring away from the usual residence of the parents.

† The figures for the Great Towns in the weekly columns relate to 126 Towns. The comparable totals for the years 1937 and 1938 in the last two columns, are in respect of 122 Towns to the end of March and 124 Towns thereafter.

DATE.		ATMOSPHERIC ELECTRICITY. (For explanation of symbols, <i>see</i> Note.)	Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
August, 1938.					
Sunday	21		9.7	14.3	Little cloud till 8h., then partially cloudy. Nearly overcast from 13h. till 22h., then nearly cloudless. Dew in morning. Rain about 15h. Thunder 16h.
Monday	22		0.1	14.3	Little cloud till 3h., then nearly overcast. Clearing after 21h. Rain 10h. and slight rain 17h. till 19h.
Tuesday	23		10.7	14.2	Little cloud, overcast and foggy by 1h. Clearing at 8h., then partially cloudy. Cloudless or nearly so from 14h. Dew in morning.
Wednesday	24	Discontinued.	6.9	14.1	Cloudless till 4h., generally cloudy from 5h.
Thursday	25		7.8	14.1	Generally cloudy till 14h., then nearly overcast. Overcast from 19h.
Friday	26		1.0	14.0	Overcast or nearly so. Damping 16h. till 18h., then rain till 20h.
Saturday	27		4.2	13.9	Overcast or nearly so. Misty in morning.
No. of Column		25	Sum 39.8	Sum 98.9	
			26	27	

The results apply to the Civil Day, or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "*higher*" and - "*lower*" than the average.

The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined.

The numbers in column 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer increased from 29.68 ins. at the beginning of the week to 30.01 ins. by 21h. on Aug. 23rd; decreased to 29.92 ins. by 15h. on Aug. 24th; increased to 29.99 ins. by 21h. on Aug. 26th; decreased and was 29.85 ins. by midnight on Aug. 27th.

The results apply to the Civil Day, or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "higher" and - "lower" than the average.

The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined.

The numbers in column 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine on each day.

The reading of the barometer increased from 29.68 ins. at the beginning of the week to 30.01 ins. by 21h. on Aug. 23rd; decreased to 29.92 ins. by 15h. on Aug. 25th; increased to 29.99 ins. by 21h. on Aug. 26th; decreased and was 29.85 ins. by midnight on Aug. 27th.

# The Guide to Current Official Statistics

It is the aim of the Permanent Consultative Committee on Official Statistics, in issuing this Annual Guide, to direct the enquirer to all current official publications that contain statistics bearing on his subject, and especially to inform him of the nature of the statistics he will find in the volume to which he is referred. The Guide embraces two distinct sections (i) a Subject Index and (ii) a List of Publications. It covers the whole of the statistical information contained in publications issued by Government Departments in Great Britain and Northern Ireland and is a work of obvious utility.

## CENSUS OF ENGLAND AND WALES, 1931

Census volumes in respect of the counties of England and Wales have now been published.

Parts I of the series, which are complete, relate to the areas as constituted at the date of the Census. Parts II will deal with the changes in boundary effected by County schemes under the Local Government Act of 1929, and will provide a limited range of statistics in respect of the newly constituted areas.

Sectional volumes presenting the results of the census of industries, occupations, etc. are also available, and particulars will be furnished on application.

# EPIDEMICS IN SCHOOLS

MEDICAL RESEARCH COUNCIL

SPECIAL REPORT No. 227

School communities offer somewhat special facilities for the investigation of epidemic and other illnesses and during the last seven years a Committee appointed by the Medical Research Council has been investigating the subject from both scientific and practical standpoints.

Although the Committee responsible for the report declare that their investigations throw no light on the question of why an epidemic spreads, nor on the factors favouring limitation of an outbreak, their careful study based on data collected over five years throws a great deal of light on the problem of school infections generally. It shows the present position in schools by means of a detailed statistical analysis (illustrating for example the often marked differences between the health record in schools for boys and for girls) and points to the important problems still unsolved and indicates how they may best be tackled.

## EXPLANATORY STATEMENT

TABLE I shows, for London and the County Boroughs and those urban districts with resident populations exceeding 50,000 at the last Census, the number of births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday. The births relate to those registered in the area, but include births occurring in municipal maternity hospitals situate outside the area to which they belong.

The deaths are exclusive of non-residents but corrected as far as possible by the inclusion of deaths of residents in other areas. The deaths in Edinburgh and Glasgow are fully corrected for non-residents; those in Dublin and Belfast are corrected by the exclusion of deaths of non-residents occurring in public institutions.

TABLE 2 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for the previous year.

TABLE 3 is a summary of cases of certain specified infectious diseases in England and Wales notifiable under the general law or under orders made by the Local Government Board or Minister of Health and is based upon weekly returns received from the Medical Officers of Health of all Local (and Port) Health Authorities.

The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are *omitted* from this Summary.

TABLE 3A is similar to Table 3, but relates to the returns received too late for inclusion in Table 3 of the previous week. It includes revised figures for England and Wales as a whole for that week.

TABLE 4 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for the previous year.

TABLE 5 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 6 is a Report of the meteorological observations taken at Greenwich on each day of the week.

Summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, are published in the Registrar-General's Quarterly Return and the Statistical Review (Part I).

## NOTES FOR THE WEEK ENDED 3rd SEPTEMBER, 1938

### BIRTHS AND DEATHS.

In the 126 County Boroughs and Great Towns of England and Wales the live births registered in the thirty-fifth week of the year numbered 6,413 corresponding to an annual rate of 15.8 per 1,000 living: stillbirths numbered 283 corresponding to a rate of 42 per 1,000 total births registered (including stillborn): the deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 3,713 (20 less than in the preceding week).

Infant mortality based on the average weekly number of live births during the last 52 weeks, was 41 against 41, 47, and 46 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,153 live births registered corresponding to an annual rate of 14.7 per 1,000 living: stillbirths numbered 47 corresponding to a rate of 39 per 1,000 total births (including stillborn): the deaths (excluding stillbirths) numbered 681 (41 more than in the preceding week): infant mortality, based on the average weekly number of live births during the last 52 weeks, was 36, against 29, 41, and 31 in the preceding three weeks.

**Table 3.—Notifications of Infectious Diseases.**

**Number of cases notified in the week ended 3rd September, 1938, in Administrative Areas and Port Health Districts with Summary for England and Wales**

*Note.*—Where no return has been received a \* is inserted in the columns. Totals shown against the names of Counties include any associated County Boroughs. The letters in the last column denote the following diseases :—A, Cholera ; B, Plague ; C, Puerperal fever (London A. C. only) ; D, Cerebro-spinal fever ; E, Acute poliomyelitis ; F, Acute poli-encephalitis ; G, Acute encephalitis lethargica ; H, Typhus fever ; I, Relapsing fever ; J, Continued fever (London A. C. only) ; L, Dysentery ; M, Ophthalmia neonatorum ; N, Puerperal pyrexia†.

† By virtue of the Public Health Act, 1936, in all areas outside London A. C., conditions notifiable as puerperal fever prior to the 1st October, 1937, are, from that date, notifiable as and included with notifications of puerperal pyrexia.

**Summary.**

	Small-pox.	Scarlet fever.	Diphtheria.	Enteric (typhoid and paratyphoid) fever.	Acute pneumonia (primary or influenzal).	Cholera.	Plague.	Puerperal fever (London A. C. only).	Cerebro-spinal fever.	Acute poliomyelitis.	Acute poli-encephalitis.	Acute encephalitis lethargica.	Typhus fever.	Relapsing fever	Continued fever (London A. C. only).	Dysentery.	Ophthalmia neonatorum.	Puerperal pyrexia.†

\* The figures in this Table relate to the areas as constituted at the date of the weekly returns no corrections having been made for changes in boundary. The live births are derived from the weekly returns furnished by the Registrars and differ from those published for the towns in the Quarterly Return which are corrected for births occurring away from the usual residence of the parents.

† The figures for the Great Towns in the weekly columns relate to 126 Towns. The comparable totals for the years 1937 and 1938 in the last two columns, are in respect of 122 Towns to the end of March and 124 Towns thereafter.

DATE.	ATMOSPHERIC ELECTRICITY. (For explanation of symbols, see Note.)	Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.	
August, 1938.					
Sunday ... 28		0 7	13 9	Overcast Generally. Rain 7 <sup>45</sup> h. till 9 <sup>45</sup> h. Occasional slight rain 12h. till 19h. Rain from 20 <sup>45</sup> h.	<p>The results apply to the Civil Day, or from midnight to midnight, Greenwich Mean Time. The height of the column of the barometer is 132 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.</p> <p>Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.</p> <p>The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1903, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "higher" and - "lower" than the average.</p> <p>The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined.</p> <p>The numbers in column 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of <i>bright</i> sunshine on each day.</p> <p>The reading of the barometer decreased from 29.85 ins. at the beginning of the week to 29.61 ins. by 4h. on Aug. 29th; increased to 30.03 ins. by 8h. on Sept. 3rd; decreased and was 30.01 ins. by midnight on the same day.</p>
Monday ... 29		0 0	13 8	Overcast till 20 <sup>45</sup> h., few clouds by 21h. Rain till 4 <sup>45</sup> h., then damping till 12h. Mist in morning.

# The Guide to Current Official Statistics

It is the aim of the Permanent Consultative Committee on Official Statistics, in issuing this Annual Guide, to direct the enquirer to all current official publications that contain statistics bearing on his subject, and especially to inform him of the nature of the statistics he will find in the volume to which he is referred. The Guide embraces two distinct sections (i) a Subject Index and (ii) a List of Publications. It covers the whole of the statistical information contained in publications issued by Government Departments in Great Britain and Northern Ireland and is a work of obvious utility.

## CENSUS OF ENGLAND AND WALES, 1931

Census volumes in respect of the counties of England and Wales have now been published,

Parts I of the series, which are complete, relate to the areas as constituted at the date of the Census. Parts II will deal with the changes in boundary effected by County schemes under the Local Government Act of 1929, and will provide a limited range of statistics in respect of the newly constituted areas.

Sectional volumes presenting the results of the census of industries, occupations, etc. are also available, and particulars will be furnished on application.

## EXPLANATORY STATEMENT

TABLE I shows, for London and the County Boroughs and those urban districts with resident populations exceeding 50,000 at the last Census, the number of births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday. The births relate to those registered in the area, but include births occurring in municipal maternity hospitals situate outside the area to which they belong.

The deaths are exclusive of non-residents but corrected as far as possible by the inclusion of deaths of residents in other areas. The deaths in Edinburgh and Glasgow are fully corrected for non-residents; those in Dublin and Belfast are corrected by the exclusion of deaths of non-residents occurring in public institutions.

TABLE 2 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for the previous year.

TABLE 3 is a summary of cases of certain specified infectious diseases in England and Wales notifiable under the general law or under orders made by the Local Government Board or Minister of Health and is based upon weekly returns received from the Medical Officers of Health of all Local (and Port) Health Authorities.

The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are *omitted* from this Summary.

TABLE 3A is similar to Table 3, but relates to the returns received too late for inclusion in Table 3 of the previous week. It includes revised figures for England and Wales as a whole for that week.

TABLE 4 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for the previous year.

TABLE 5 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 6 is a Report of the meteorological observations taken at Greenwich on each day of the week.

Summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, are published in the Registrar-General's Quarterly Return and the Statistical Review (Part I).

## NOTES FOR THE WEEK ENDED 10th SEPTEMBER, 1938

### BIRTHS AND DEATHS.

In the 126 County Boroughs and Great Towns of England and Wales the live births registered in the thirty-sixth week of the year numbered 6,261 corresponding to an annual rate of 15.4 per 1,000 living: stillbirths numbered 247 corresponding to a rate of 38 per 1,000 total births registered (including stillborn): the deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 3,923 (211 more than in the preceding week).

Infant mortality based on the average weekly number of live births during the last 52 weeks, was 43 against 47, 46, and 41 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,104 live births registered corresponding to an annual rate of 14.1 per 1,000 living: stillbirths numbered 38 corresponding to a rate of 33 per 1,000 total births (including stillborn): the deaths (excluding stillbirths) numbered 745 (64 more than in the preceding week): infant mortality, based on the average weekly number of live births during the last 52 weeks, was 35, against 41, 31, and 36 in the preceding three weeks.

Table 3.—Notifications of Infectious Diseases.

Number of cases notified in the week ended 10th September, 1938, in Administrative Areas and Port Health Districts with Summary for England and Wales

*Note.*—Where no return has been received a \* is inserted in the columns. Totals shown against the names of Counties include any associated County Boroughs. The letters in the last column denote the following diseases :—A, Cholera ; B, Plague ; C, Puerperal fever (London A. C. only) ; D, Cerebro-spinal fever ; E, Acute poliomyelitis ; F, Acute poliomyelitis ; G, Acute encephalitis lethargica ; H, Typhus fever ; I, Relapsing fever ; J, Continued fever (London A. C. only) ; L, Dysentery ; M, Ophthalmia neonatorum ; N, Puerperal pyrexia†.

† By virtue of the Public Health Act, 1936, in all areas outside London A. C., conditions notifiable as puerperal fever prior to the 1st October, 1937, are, from that date, notifiable as and included with notifications of puerperal pyrexia.

## Summary.

Table 3.—Notifications of Infectious Diseases—continued

	Small-pox.	Scarlet fever.	Diphtheria.	Enteric (typhoid & paratyphoid) fever.	Acute pneumonia (prim'y or influenz'l).	Other diseases (see note at head of table).		Small-pox.	Scarlet fever. \* The figures in this Table relate to the areas as constituted at the date of the weekly returns no corrections having been made for changes in boundary. The live births are derived from the weekly returns furnished by the Registrars and differ from those published for the towns in the Quarterly Return which are corrected for births occurring away from the usual residence of the parents.

† The figures for the Great Towns in the weekly columns relate to 126 Towns. The comparable totals for the years 1937 and 1938 in the last two columns, are in respect of 122 Towns to the end of March and 124 Towns thereafter.

DATE.		ATMOSPHERIC ELECTRICITY. (For explanation of symbols, see Note.)	Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
SEPTEMBER, 1938.					
Sunday	4		3.1	13.4	Very cloudy till 21h., then nearly cloudless.
Monday	5		2.6	13.4	Cloudless till 3h., overcast by 4h., cloudy 10h. till 18h., then overcast. Slight mist in morning. Slight shower about 21h.
Tuesday	6		0.3	13.3	Overcast generally till 20h., few clouds by 21h. Drizzle 10½h. till 12½h. Thunderstorm 18½h. till 19½h.
Wednesday	7	Discontinued.	0.5	13.2	Nearly overcast by 1h. Rain 17½h. till 18h.
Thursday	8		1.4	13.1	Overcast or nearly so.
Friday	9		1.5	13.1	Overcast or nearly so. Cloudless from 23h.
Saturday	10		1.4	13.0	Little cloud till 2½h. Nearly overcast from 3h.
No. of Columns		25	Sum 10.8	Sum 92.5	
			26	27	

The results apply to the Civil Day, or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean readings of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "higher" and - "lower" than the average.

The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined.

The numbers in column 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer decreased from 30.07 ins. at the beginning of the week to 29.62 ins. by 13h. on Sept. 7th; increased generally and was 30.09 ins. by midnight on Sept. 10th.

# The Guide to Current Official Statistics

It is the aim of the Permanent Consultative Committee on Official Statistics, in issuing this Annual Guide, to direct the enquirer to all current official publications that contain statistics bearing on his subject, and especially to inform him of the nature of the statistics he will find in the volume to which he is referred. The Guide embraces two distinct sections (i) a Subject Index and (ii) a List of Publications. It covers the whole of the statistical information contained in publications issued by Government Departments in Great Britain and Northern Ireland and is a work of obvious utility.

## CENSUS OF ENGLAND AND WALES, 1931

Census volumes in respect of the counties of England and Wales have now been published,

Parts I of the series, which are complete, relate to the areas as constituted at the date of the Census. Parts II will deal with the changes in boundary effected by County schemes under the Local Government Act of 1929, and will provide a limited range of statistics in respect of the newly constituted areas.

Sectional volumes presenting the results of the census of industries, occupations, etc. are also available, and particulars will be furnished on application.

# EPIDEMICS IN SCHOOLS

MEDICAL RESEARCH COUNCIL

SPECIAL REPORT No. 227

School communities offer somewhat special facilities for the investigation of epidemic and other illnesses and during the last seven years a Committee appointed by the Medical Research Council has been investigating the subject from both scientific and practical standpoints.

Although the Committee responsible for the report declare that their investigations throw no light on the question of why an epidemic spreads, nor on the factors favouring limitation of an outbreak, their careful study based on data collected over five years throws a great deal of light on the problem of school infections generally. It shows the present position in schools by means of a detailed statistical analysis (illustrating for example the often marked differences between the health record in schools for boys and for girls) and points to the important problems still unsolved and indicates how they may best be tackled.

## EXPLANATORY STATEMENT

TABLE I shows, for London and the County Boroughs and those urban districts with resident populations exceeding 50,000 at the last Census, the number of births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday. The births relate to those registered in the area, but include births occurring in municipal maternity hospitals situate outside the area to which they belong.

The deaths are exclusive of non-residents but corrected as far as possible by the inclusion of deaths of residents in other areas. The deaths in Edinburgh and Glasgow are fully corrected for non-residents; those in Dublin and Belfast are corrected by the exclusion of deaths of non-residents occurring in public institutions.

TABLE 2 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for the previous year.

TABLE 3 is a summary of cases of certain specified infectious diseases in England and Wales notifiable under the general law or under orders made by the Local Government Board or Minister of Health and is based upon weekly returns received from the Medical Officers of Health of all Local (and Port) Health Authorities.

The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are *omitted* from this Summary.

TABLE 3A is similar to Table 3, but relates to the returns received too late for inclusion in Table 3 of the previous week. It includes revised figures for England and Wales as a whole for that week.

TABLE 4 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for the previous year.

TABLE 5 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 6 is a Report of the meteorological observations taken at Greenwich on each day of the week.

Summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, are published in the Registrar-General's Quarterly Return and the Statistical Review (Part I).

## NOTES FOR THE WEEK ENDED 17th SEPTEMBER, 1938

### BIRTHS AND DEATHS.

In the 126 County Boroughs and Great Towns of England and Wales the live births registered in the thirty-seventh week of the year numbered 6,230 corresponding to an annual rate of 15.3 per 1,000 living: stillbirths numbered 250 corresponding to a rate of 39 per 1,000 total births registered (including stillborn): the deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 4,100 (178 more than in the preceding week).

Infant mortality based on the average weekly number of live births during the last 52 weeks, was 48 against 46, 41, and 43 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,118 live births registered corresponding to an annual rate of 14.2 per 1,000 living: stillbirths numbered 31 corresponding to a rate of 27 per 1,000 total births (including stillborn): the deaths (excluding stillbirths) numbered 786 (41 more than in the preceding week): infant mortality, based on the average weekly number of live births during the last 52 weeks, was 38, against 31, 36, and 35 in the preceding three weeks.

Table 3.—Notifications of Infectious Diseases.

Number of cases notified in the week ended 17th September, 1938, in Administrative Areas and Port Health Districts with Summary for England and Wales.

*Note.*—Where no return has been received a \* is inserted in the columns. Totals shown against the names of Counties include any associated County Boroughs. The letters in the last column denote the following diseases :—A, Cholera; B, Plague; C, Puerperal fever (London A. C. only); D, Cerebro-spinal fever; E, Acute poliomyelitis; F, Acute polio-encephalitis; G, Acute encephalitis lethargica; H, Typhus fever; I, Relapsing fever; J, Continued fever (London A. C. only); L, Dysentery; M, Ophthalmia neonatorum; N, Puerperal pyrexia†.

† By virtue of the Public Health Act, 1936, in all areas outside London A. C., conditions notifiable as puerperal fever prior to the 1st October, 1937, are, from that date, notifiable as and included with notifications of puerperal pyrexia.

Summary.

	Small-pox.	Scarlet fever.	Diphtheria.	Enteric (typhoid and paratyphoid) fever.	Acute pneumonia (primary or influenzal).	Cholera.	Plague.	Puerperal fever (London A. C. only).	Cerebro-spinal fever.	Acute poliomyelitis.	Acute polioencephalitis.	Acute encephalitis lethargica.	Typhus fever.	Relapsing fever.	Continued fever (London A. C. only).	Dysentery.	Ophthalmia neonatorum.	Puerperal pyrexia.†

\* The figures in this Table relate to the areas as constituted at the date of the weekly returns no corrections having been made for changes in boundary. The live births are derived from the weekly returns furnished by the Registrars and differ from those published for the towns in the Quarterly Return which are corrected for births occurring away from the usual residence of the parents.

† The figures for the Great Towns in the weekly columns relate to 126 Towns. The comparable totals for the years 1937 and 1938 in the last two columns, are in respect of 122 Towns to the end of March and 124 Towns thereafter.

No. of Columns		25	Sum 44.0	Sum 89.6	
			26	27	

The results apply to the Civil Day, or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean reading of the dry bulb maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 55 years ending 1903, and that of horizontal movement of the air from a discussion of the anemometric records for the 30 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "higher" and - "lower" than the average.

The values given in column 10 are not corrected for the index error of the thermometer, which cannot be determined.

The numbers in column 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine on each day.

The reading of the barometer increased from 30.09 ins. at the beginning of the week to 30.11 ins. by 9h. on Sept. 11th; decreased to 29.73 ins. by 17h. on Sept. 14th; increased to 30.09 ins. by 2h. on Sept. 16th; decreased and was 29.71 ins. by midnight on Sept. 17th.

## CENSUS OF ENGLAND AND WALES, 1931

Census volumes in respect of the counties of England and Wales have now been published,

Parts I of the series, which are complete, relate to the areas as constituted at the date of the Census. Parts II will deal with the changes in boundary effected by County schemes under the Local Government Act of 1929, and will provide a limited range of statistics in respect of the newly constituted areas.

Sectional volumes presenting the results of the census of industries, occupations, etc. are also available, and particulars will be furnished on application.

# EPIDEMICS IN SCHOOLS

MEDICAL RESEARCH COUNCIL

SPECIAL REPORT No. 227

School communities offer somewhat special facilities for the investigation of epidemic and other illnesses and during the last seven years a Committee appointed by the Medical Research Council has been investigating the subject from both scientific and practical standpoints.

Although the Committee responsible for the report declare that their investigations throw no light on the question of why an epidemic spreads, nor on the factors favouring limitation of an outbreak, their careful study based on data collected over five years throws a great deal of light on the problem of school infections generally. It shows the present position in schools by means of a detailed statistical analysis (illustrating for example the often marked differences between the health record in schools for boys and for girls) and points to the important problems still unsolved and indicates how they may best be tackled.

## EXPLANATORY STATEMENT

TABLE I shows, for London and the County Boroughs and those urban districts with resident populations exceeding 50,000 at the last Census, the number of births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday. The births relate to those registered in the area, but include births occurring in municipal maternity hospitals situate outside the area to which they belong.

The deaths are exclusive of non-residents but corrected as far as possible by the inclusion of deaths of residents in other areas. The deaths in Edinburgh and Glasgow are fully corrected for non-residents; those in Dublin and Belfast are corrected by the exclusion of deaths of non-residents occurring in public institutions.

TABLE 2 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for the previous year.

TABLE 3 is a summary of cases of certain specified infectious diseases in England and Wales notifiable under the general law or under orders made by the Local Government Board or Minister of Health and is based upon weekly returns received from the Medical Officers of Health of all Local (and Port) Health Authorities.

The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are *omitted* from this Summary.

TABLE 3A is similar to Table 3, but relates to the returns received too late for inclusion in Table 3 of the previous week. It includes revised figures for England and Wales as a whole for that week.

TABLE 4 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for the previous year.

TABLE 5 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 6 is a Report of the meteorological observations taken at Greenwich on each day of the week.

Summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, are published in the Registrar-General's Quarterly Return and the Statistical Review (Part I).

## NOTES FOR THE WEEK ENDED 24th SEPTEMBER, 1938

### BIRTHS AND DEATHS.

In the 126 County Boroughs and Great Towns of England and Wales the live births registered in the thirty-eighth week of the year numbered 6,311 corresponding to an annual rate of 15.5 per 1,000 living: stillbirths numbered 284 corresponding to a rate of 43 per 1,000 total births registered (including stillborn): the deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 4,057 (43 less than in the preceding week).

Infant mortality based on the average weekly number of live births during the last 52 weeks, was 45 against 41, 43, and 48 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,158 live births registered corresponding to an annual rate of 14.7 per 1,000 living: stillbirths numbered 44 corresponding to a rate of 37 per 1,000 total births (including stillborn): the deaths (excluding stillbirths) numbered 781 (5 less than in the preceding week): infant mortality, based on the average weekly number of live births during the last 52 weeks, was 41, against 36, 35, and 38 in the preceding three weeks.

Table 3.—Notifications of Infectious Diseases.

Number of cases notified in the week ended 24th September, 1938, in Administrative Areas and Port Health Districts with Summary for England and Wales.

*Note.*—Where no return has been received a \* is inserted in the columns. Totals shown against the names of Counties include any associated County Boroughs. The letters in the last column denote the following diseases :—A, Cholera ; B, Plague ; C, Puerperal fever (London A. C. only) ; D, Cerebro-spinal fever ; E, Acute poliomyelitis ; F, Acute polio-encephalitis ; G, Acute encephalitis lethargica ; H, Typhus fever ; I, Relapsing fever ; J, Continued fever (London A. C. only) ; L, Dysentery ; M, Ophthalmia neonatorum ; N, Puerperal pyrexia†.

† By virtue of the Public Health Act, 1936, in all areas outside London A. C., conditions notifiable as puerperal fever prior to the 1st October, 1937, are, from that date, notifiable as and included with notifications of puerperal pyrexia.

Summary.

	Small-pox.	Scarlet fever.	Diphtheria.	Enteric (typhoid and paratyphoid) fever.	Acute pneumonia (primary or influenzal).	Cholera.	Plague.	Puerperal fever (London A. C. only).	Cerebro-spinal fever.	Acute poliomyelitis.	Acute polioencephalitis.	Acute encephalitis lethargica.	Typhus fever.	Relapsing fever.	Continued fever (London A. C. only).	Dysentery.	Ophthalmia neonatorum.	Puerperal pyrexia.†

\* The figures in this Table relate to the areas as constituted at the date of the weekly returns no corrections having been made for changes in boundary. The live births are derived from the weekly returns furnished by the Registrars and differ from those published for the towns in the Quarterly Return which are corrected for births occurring away from the usual residence of the parents.

† The figures for the Great Towns in the weekly columns relate to 126 Towns. The comparable totals for the years 1937 and 1938 in the last two columns, are in respect of 122 Towns to the end of March and 124 Towns thereafter.

Table 5.—Meteorology in certain Towns during the Week ended Saturday, 24th September, 1938.

			26	27	

The results apply to the Civil Day, or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "higher" and - "lower" than the average.

The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined.

The numbers in column 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer decreased from 29.71 ins. at the beginning of the week to 29.46 ins. by 13h. on Sept. 20th; increased to 29.81 ins. by 9h. on Sept. 22nd; decreased and was 29.67 ins. by midnight on Sept. 24th.

The results apply to the Civil Day, or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The reading of the barometer decreased from 29.71 ins. at the beginning of the week to 29.46 ins. by 13h. on Sept. 20th; increased to 29.81 ins. by 9h. on Sept. 22nd; decreased and was 29.67 ins. by midnight on Sept. 24th.

## CENSUS OF ENGLAND AND WALES, 1931

Census volumes in respect of the counties of England and Wales have now been published,

Parts I of the series, which are complete, relate to the areas as constituted at the date of the Census. Parts II will deal with the changes in boundary effected by County schemes under the Local Government Act of 1929, and will provide a limited range of statistics in respect of the newly constituted areas.

Sectional volumes presenting the results of the census of industries, occupations, etc. are also available, and particulars will be furnished on application.

# EPIDEMICS IN SCHOOLS

MEDICAL RESEARCH COUNCIL

SPECIAL REPORT No. 227

School communities offer somewhat special facilities for the investigation of epidemic and other illnesses and during the last seven years a Committee appointed by the Medical Research Council has been investigating the subject from both scientific and practical standpoints.

Although the Committee responsible for the report declare that their investigations throw no light on the question of why an epidemic spreads, nor on the factors favouring limitation of an outbreak, their careful study based on data collected over five years throws a great deal of light on the problem of school infections generally. It shows the present position in schools by means of a detailed statistical analysis (illustrating for example the often marked differences between the health record in schools for boys and for girls) and points to the important problems still unsolved and indicates how they may best be tackled.

## EXPLANATORY STATEMENT

TABLE I shows, for London and the County Boroughs and those urban districts with resident populations exceeding 50,000 at the last Census, the number of births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday. The births relate to those registered in the area, but include births occurring in municipal maternity hospitals situate outside the area to which they belong.

The deaths are exclusive of non-residents but corrected as far as possible by the inclusion of deaths of residents in other areas. The deaths in Edinburgh and Glasgow are fully corrected for non-residents; those in Dublin and Belfast are corrected by the exclusion of deaths of non-residents occurring in public institutions.

TABLE 2 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for the previous year.

TABLE 3 is a summary of cases of certain specified infectious diseases in England and Wales notifiable under the general law or under orders made by the Local Government Board or Minister of Health and is based upon weekly returns received from the Medical Officers of Health of all Local (and Port) Health Authorities.

The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are *omitted* from this Summary.

TABLE 3A is similar to Table 3, but relates to the returns received too late for inclusion in Table 3 of the previous week. It includes revised figures for England and Wales as a whole for that week.

TABLE 4 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for the previous year.

TABLE 5 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 6 is a Report of the meteorological observations taken at Greenwich on each day of the week.

Summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, are published in the Registrar-General's Quarterly Return and the Statistical Review (Part I).

## NOTES FOR THE WEEK ENDED 1st OCTOBER, 1938

### BIRTHS AND DEATHS.

In the 126 **County Boroughs and Great Towns** of England and Wales the live births registered in the thirty-ninth week of the year numbered 6,521 corresponding to an annual rate of 16.0 per 1,000 living: stillbirths numbered 275 corresponding to a rate of 40 per 1,000 total births registered (including stillborn): the deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 3,919 (138 less than in the preceding week).

Infant mortality based on the average weekly number of live births during the last 52 weeks, was 48 against 43, 48, and 45 in the preceding three weeks.

In **London** (Administrative County including the City of London) there were 1,250 live births registered corresponding to an annual rate of 15.9 per 1,000 living: stillbirths numbered 36 corresponding to a rate of 28 per 1,000 total births (including stillborn): the deaths (excluding stillbirths) numbered 713 (68 less than in the preceding week): infant mortality, based on the average weekly number of live births during the last 52 weeks, was 31, against 35, 38, and 41 in the preceding three weeks.

**Table 3.—Notifications of Infectious Diseases.**

**Number of cases notified in the week ended 1st October, 1938, in Administrative Areas and Port Health Districts with Summary for England and Wales**

*Note.*—Where no return has been received a \* is inserted in the columns. Totals shown against the names of Counties include any associated County Boroughs. The letters in the last column denote the following diseases:—A, Cholera; B, Plague; C, Puerperal fever (London A. C. only); D, Cerebro-spinal fever; E, Acute poliomyelitis; F, Acute poli-encephalitis; G, Acute encephalitis lethargica; H, Typhus fever; I, Relapsing fever; J, Continued fever (London A. C. only); L, Dysentery; M, Ophthalmia neonatorum; N, Puerperal pyrexia†.

† By virtue of the Public Health Act, 1936, in all areas outside London A. C., conditions notifiable as puerperal fever prior to the 1st October, 1937, are, from that date, notifiable as and included with notifications of puerperal pyrexia.

**Summary.**

	Small-pox.	Scarlet fever.	Diphtheria.	Enteric (typhoid and paratyphoid) fever.	Acute pneumonia (primary or influenzal).	Cholera.	Plague.	Puerperal fever (London A. C. only).	Cerebro-spinal fever.	Acute poliomyelitis.	Acute poli-encephalitis.	Acute encephalitis lethargica.	Typhus fever.	Relapsing fever.	Continued fever (London A. C. only).	Dysentery.	Ophthalmia neonatorum.	Puerperal pyrexia.†

\* The figures in this Table relate to the areas as constituted at the date of the weekly returns no corrections having been made for changes in boundary. The live births are derived from the weekly returns furnished by the Registrars and differ from those published for the towns in the Quarterly Return which are corrected for births occurring away from the usual residence of the parents.

† The figures for the Great Towns in the weekly columns relate to 126 Towns. The comparable totals for the years 1937 and 1938 in the last two columns, are in respect of 122 Towns to the end of March and 124 Towns thereafter.

DATE.		ATMOSPHERIC ELECTRICITY. (For explanation of symbols, see Note.)	Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
SEPTEMBER, 1938.					
Sunday	25		1.7	12.1	Overcast till 15h., cloudy till 18h., few clouds by 19h. Slight rain 4h. till 6h., then rain till 9h.
Monday	26		0.1	12.0	Cloudless till 3h., partially cloudy till 6h., over- cast and foggy by 7h. Fog clearing after 10h. Slight rain 10h. till 11h. and 13h. till 19h.
Tuesday	27		2.1	11.9	Generally overcast. Rain till 4h. and 13h. till 22h. Thunder and lightning occasionally 19h. till 20h.
Wednesday	28		0.5	11.9	Overcast or nearly so.
Thursday	29	Discontinued.	2.3	11.8	Very cloudy or nearly overcast till 10h., cloud- less by 20h. Drizzle 8h. till 9h. Dew at night.
Friday	30		8.7	11.7	Cloudless till 8h., then partially cloudy gener- ally. Overcast period with rain 17h. till 18h.
OCTOBER Saturday	1		2.4	11.7	Cloudy till 2h., overcast till 10h., then very cloudy. Occasional rain 7h. till 9h.
No. of Columns		25	Sum 17.8	Sum 83.1	27

The results apply to the Civil Day, or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "higher" and - "lower" than the average.

The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined.

The numbers in column 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer decreased from 29.67 ins. at the beginning of the week to 29.66 ins. by 3h. on Sept. 25th; increased to 29.84 ins. by 11h. on Sept. 27th, decreased to 29.61 ins. by 3h. on Sept. 29th; increased to 29.82 ins. by 10h. on Oct. 1st; decreased and was 29.80 ins. by midnight on the same day.

The results apply to the Civil Day, or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. ## CENSUS OF ENGLAND AND WALES, 1931

Census volumes in respect of the counties of England and Wales have now been published,

Parts I of the series, which are complete, relate to the areas as constituted at the date of the Census. Parts II will deal with the changes in boundary effected by County schemes under the Local Government Act of 1929, and will provide a limited range of statistics in respect of the newly constituted areas.

Sectional volumes presenting the results of the census of industries, occupations, etc. are also available, and particulars will be furnished on application.

# BETTER HEALTH

Whitefriars House, 68, Fleet Street, London, E.C.4.

The Official Journal of the Central Council for Health Education. It is intended to carry simple, non-technical and accurate teaching on the prevention of disease into the homes of the people. With the assistance of upwards of 150 health departments, the circulation has now reached 300,000 copies per month.

Quantities are supplied at special prices for local distribution. Write for specimen copy and particulars.

## MINISTRY OF HEALTH

19TH ANNUAL REPORT 1937-38

Cmd. 5801

A record of the progress made during the year towards a fitter nation. A steady advance in the provision of improved environmental conditions, particularly in rural areas, the extension of existing and the provision of new medical and welfare services are reported. The rates of maternal mortality, infantile death and death from tuberculosis all show decreases and the health services provided by Local Authorities have contributed largely to these improvements.

Every aspect of health and its contributory factors are dealt with in the Report which comprises 230 pages of text with a further 88 pages of statistical appendices and an index.

The main sections are :

- General
- Public Health
- Public Assistance
- Housing and Town Planning
- Local Government
- National Health Insurance and Pensions.

The Welsh Board of Health is the Department responsible for the administration of health and poor law matters in Wales and a separate section in the Report is devoted to that country while separate statistics are provided.

Roy. 8vo. xi + 318 pages.

## EXPLANATORY STATEMENT

TABLE I shows, for London and the County Boroughs and those urban districts with resident populations exceeding 50,000 at the last Census, the number of births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday. The births relate to those registered in the area, but include births occurring in municipal maternity hospitals situate outside the area to which they belong.

The deaths are exclusive of non-residents but corrected as far as possible by the inclusion of deaths of residents in other areas. The deaths in Edinburgh and Glasgow are fully corrected for non-residents; those in Dublin and Belfast are corrected by the exclusion of deaths of non-residents occurring in public institutions.

TABLE 2 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for the previous year.

TABLE 3 is a summary of cases of certain specified infectious diseases in England and Wales notifiable under the general law or under orders made by the Local Government Board or Minister of Health and is based upon weekly returns received from the Medical Officers of Health of all Local (and Port) Health Authorities.

The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are *omitted* from this Summary.

TABLE 3A is similar to Table 3, but relates to the returns received too late for inclusion in Table 3 of the previous week. It includes revised figures for England and Wales as a whole for that week.

TABLE 4 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for the previous year.

TABLE 5 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 6 is a Report of the meteorological observations taken at Greenwich on each day of the week.

Summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, are published in the Registrar-General's Quarterly Return and the Statistical Review (Part I).

## NOTES FOR THE WEEK ENDED 8th OCTOBER, 1938

### BIRTHS AND DEATHS.

In the 126 **County Boroughs and Great Towns** of England and Wales the live births registered in the fortieth week of the year numbered 5,981 corresponding to an annual rate of 14.7 per 1,000 living: stillbirths numbered 225 corresponding to a rate of 36 per 1,000 total births registered (including stillborn): the deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 4,062 (131 more than in the preceding week).

Infant mortality based on the average weekly number of live births during the last 52 weeks, was 48 against 48, 45, and 48 in the preceding three weeks.

In **London** (Administrative County including the City of London) there were 1,180 live births registered corresponding to an annual rate of 15.0 per 1,000 living: stillbirths numbered 30 corresponding to a rate of 25 per 1,000 total births (including stillborn): the deaths (excluding stillbirths) numbered 745 (32 more than in the preceding week): infant mortality, based on the average weekly number of live births during the last 52 weeks, was 35, against 38, 41 and 31 in the preceding three weeks.

**Table 3.—Notifications of Infectious Diseases.**

**Number of cases notified in the week ended 8th October, 1938, in Administrative Areas and Port Health Districts with Summary for England and Wales**

*Note.*—Where no return has been received a \* is inserted in the columns. Totals shown against the names of Counties include any associated County Boroughs. The letters in the last column denote the following diseases:—A, Cholera; B, Plague; C, Puerperal fever (London A. C. only); D, Cerebro-spinal fever; E, Acute poliomyelitis; F, Acute polio-encephalitis; G, Acute encephalitis lethargica; H, Typhus fever; I, Relapsing fever; J, Continued fever (London A. C. only); L, Dysentery; M, Ophthalmia neonatorum; N, Puerperal pyrexia†.

† By virtue of the Public Health Act, 1936, in all areas outside London A. C., conditions notifiable as puerperal fever prior to the 1st October, 1937, are, from that date, notifiable as and included with notifications of puerperal pyrexia.

**Summary.**

		Small-pox.	Scarlet fever.	Diphtheria.	Enteric (typhoid and paratyphoid) fever.	Acute pneumonia (primary or influenzal).	Cholera.	Plague.	Puerperal fever (London A. C. only).	Cerebro-spinal fever.	Acute poliomyelitis.	Acute polioencephalitis.	Acute encephalitis lethargica.	Typhus fever.	Relapsing fever.	Continued fever (London A. C. only).	Dysentery.	Ophthalmia neonatorum.	Puerperal pyrexia.†

\* The figures in this Table relate to the areas as constituted at the date of the weekly returns no corrections having been made for changes in boundary. The live births are derived from the weekly returns furnished by the Registrars and differ from those published for the towns in the Quarterly Return which are corrected for births occurring away from the usual residence of the parents.

† The figures for the Great Towns in the weekly columns relate to 126 Towns. The comparable totals for the years 1937 and 1938 in the last two columns, are in respect of 122 Towns to the end of March and 124 Towns thereafter.

**Table 5.—Meteorology in certain Towns during the Week ended Saturday, 8th October, 1938.**

DATE.		ATMOSPHERIC ELECTRICITY. (For explanation of symbols, see Note.)	Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
OCTOBER, 1938.					
Sunday	2		1-2	11-6	Overcast till 15 <sup>45</sup> h., then cloudy. Clearing at 19h. to nearly cloudless by 20h. Damping 4h. to 5h.; rain 10h. to 15 <sup>45</sup> h.
Monday	3		4-8	11-5	Little cloud till 10h.; overcast by 12h.; slight rain 13 <sup>45</sup> h. till 16 <sup>45</sup> h., then rain till 20h. Rain again 22 <sup>45</sup> h. till 23 <sup>45</sup> h. Fresh wind 13h. till 17h., then strong.
Tuesday	4		5-4	11-5	Overcast, little cloud by 0 <sup>45</sup> h. Generally cloudy 7h. till 19h., then overcast. Strong wind till 18h. rising to gale force at times.
Wednesday	5		0-1	11-4	Overcast till 17h.; little cloud till 21 <sup>45</sup> h.; nearly overcast by 22h. Rain 7 <sup>45</sup> h. till 8 <sup>45</sup> h., 12h. till 14h., then slight rain till 16h.
Thursday	6		6-6	11-4	Nearly overcast till 5 <sup>45</sup> h.; little halo about 11h.; then generally cloudy. Solar halo about 15h.
Friday	7		0-0	11-3	Overcast till 16h., few clouds from 16 <sup>45</sup> h. Occasional slight rain 7h. till 12 <sup>45</sup> h., then rain till 14h. Fresh wind 7h. till 13h.
Saturday	8		3-3	11-2	Little cloud till 9h.; nearly overcast by 10 <sup>45</sup> h.; overcast from 13h. Rain 16h. till 17 <sup>45</sup> h., then slight drizzle at times.
No. of Column		25	Sum 21-4	Sum 79-9	27

Discontinued.

The results apply to the Civil Day, or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "higher," and - "lower" than the average.

The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined.

The numbers in column 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer decreased from 29.80 ins. at the beginning of the week to 29.41 ins. by 13h. on Oct. 2nd; increased to 29.59 ins. by 9h. on Oct. 3rd; decreased to 28.88 ins. by 23h. on Oct. 3rd; increased to 29.44 ins. by 23h. on Oct. 4th; decreased to 29.28 ins. by 15h. on Oct. 5th; increased to 29.78 ins. by 21h. on Oct. 6th; decreased to 29.33 ins. by 13h. on Oct. 7th; increased to 29.84 ins. by 13h. on Oct. 8th; decreased and was 29.51 ins. by midnight on the same day.

## CENSUS OF ENGLAND AND WALES, 1931

Census volumes in respect of the counties of England and Wales have now been published,

Parts I of the series, which are complete, relate to the areas as constituted at the date of the Census. Parts II will deal with the changes in boundary effected by County schemes under the Local Government Act of 1929, and will provide a limited range of statistics in respect of the newly constituted areas.

Sectional volumes presenting the results of the census of industries, occupations, etc. are also available, and particulars will be furnished on application.

# MINISTRY OF HEALTH

19TH ANNUAL REPORT, 1937-38

Cmd. 5801

A record of the progress made during the year towards a fitter nation. A steady advance in the provision of improved environmental conditions, particularly in rural areas, the extension of existing and the provision of new medical and welfare services are reported. The rates of maternal mortality, infantile death and death from tuberculosis all show decreases and the health services provided by Local Authorities have contributed largely to these improvements.

Every aspect of health and its contributory factors are dealt with in the Report which comprises 230 pages of text with a further 88 pages of statistical appendices and an index.

The main sections are :

- General
- Public Health
- Public Assistance
- Housing and Town Planning
- Local Government
- National Health Insurance and Pensions.

The Welsh Board of Health is the Department responsible for the administration of health and poor law matters in Wales and a separate section in the Report is devoted to that country while separate statistics are provided.

Table 3.—Notifications of Infectious Diseases.

Number of cases notified in the week ended 15th October, 1938, in Administrative Areas and Port Health Districts with Summary for England and Wales.

*Note.*—Where no return has been received a \* is inserted in the columns. Totals shown against the names of Counties include any associated County Boroughs. The letters in the last column denote the following diseases:—A, Cholera; B, Plague; C, Puerperal fever (London A. C. only); D, Cerebro-spinal fever; E, Acute poliomyelitis; F, Acute poli-encephalitis; G, Acute encephalitis lethargica; H, Typhus fever; I, Relapsing fever; J, Continued fever (London A. C. only); L, Dysentery; M, Ophthalmia neonatorum; N, Puerperal pyrexia†.

† By virtue of the Public Health Act, 1936, in all areas outside London A. C., conditions notifiable as puerperal fever prior to the 1st October, 1937, are, from that date, notifiable as and included with notifications of puerperal pyrexia†.

## Summary.

	Small-pox.	Scarlet fever.	Diphtheria.	Enteric (typhoid and paratyphoid) fever.	Acute pneumonia (primary or influenzal).	Cholera.	Plague.	Puerperal fever (London A. C. only).	Cerebro-spinal fever.	Acute poliomyelitis.	Acute poli-encephalitis.	Acute encephalitis lethargica.	Typhus fever.	Relapsing fever.	Continued fever (London A. C. only).	Dysentery.	Ophthalmia neonatorum.	Puerperal pyrexia.†

\* The figures in this Table relate to the areas as constituted at the date of the weekly returns no corrections having been made for changes in boundary. The live births are derived from the weekly returns furnished by the Registrars and differ from those published for the towns in the Quarterly Return which are corrected for births occurring away from the usual residence of the parents.

† The figures for the Great Towns in the weekly columns relate to 126 Towns. The comparable totals for the years 1937 and 1938 in the last two columns, are in respect of 122 Towns to the end of March and 124 Towns thereafter.

DATE.		ATMOSPHERIC ELECTRICITY. (For explanation of symbols, <i>see</i> Note.)	Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
OCTOBER, 1938.					
Sunday	9		0.3	11.2	Overcast or nearly so till 15h., then very cloudy; clearing from 23½h. Occasional rain 4h. till 9h. Fresh wind till 15h.
Monday	10		1.5	11.1	Partially cloudy till 8h., then nearly overcast. Clearing from 15½h., cloudless from 17h. Solar halo at times 9h. till 14½h. Dew at night.
Tuesday	11		5.7	11.0	Cloudless till 8h., nearly overcast by 10h. Nearly cloudless 17½h. till 22½h., very cloudy by 23h.
Wednesday	12	Discontinued.	2.7	11.0	Very cloudy till 11h., then overcast. Slight rain 12h. till 12½h., rain 17½h. till 18½h. and occasionally from 22½h.
Thursday	13		0.0	10.9	Overcast till 21h., then cloudy. Occasional rain or drizzle till 10½h.
Friday	14		8.0	10.8	Cloudy till 1h., then little cloud. Generally cloudy from 15h.
Saturday	15		6.0	10.8	Generally cloudy till 20h., then nearly overcast. Dew in morning. Solar halo about 12h.
No. of Columns				Sum 24.2	Sum 76.8

The results apply to the Civil Day, or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 0h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "*higher*" and - "*lower*" than the average.

The values given in column 16 are not corrected for the Campbell Stokes Sunshine thermometer, which cannot be determined.

The numbers in column 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer decreased from 29.51 ins. at the beginning of the week to 29.38 ins. by 9h. on Oct. 9th; increased to 29.05 ins. by 7h. on Oct. 12th; decreased to 29.74 ins. by 16h. on Oct. 13th; increased to 30.07 ins. by 22h. on Oct. 14th, decreased and was 29.85 ins. by midnight on Oct. 15th.

The results apply to the Civil Day, or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "higher" and - "lower" than the average.

The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined.

The numbers in column 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer decreased from 29.51 ins. at the beginning of the week to 29.38 ins. by 9h. on Oct. 9th; increased to 30.05 ins. by 7h. on Oct. 12th, decreased to 29.74 ins. by 16h. on Oct. 13th; increased to 30.07 ins. by 22h. on Oct. 14th; decreased and was 29.85 ins. by midnight on Oct. 15th.

## CENSUS OF ENGLAND AND WALES, 1931

Census volumes in respect of the counties of England and Wales have now been published.

Parts I of the series, which are complete, relate to the areas as constituted at the date of the Census. Parts II will deal with the changes in boundary effected by County schemes under the Local Government Act of 1929, and will provide a limited range of statistics in respect of the newly constituted areas.

Sectional volumes presenting the results of the census of industries, occupations, etc. are also available, and particulars will be furnished on application.

## 19TH ANNUAL REPORT, 1937-38

Cmd. 5801

A record of the progress made during the year towards a fitter nation. A steady advance in the provision of improved environmental conditions, particularly in rural areas, the extension of existing and the provision of new medical and welfare services are reported. The rates of maternal mortality, infantile death and death from tuberculosis all show decreases and the health services provided by Local Authorities have contributed largely to these improvements.

Every aspect of health and its contributory factors are dealt with in the Report which comprises 230 pages of text with a further 88 pages of statistical appendices and an index.

The main sections are :

General

Public Health

Public Assistance

Housing and Town Planning

Local Government

National Health Insurance and Pensions.

The Welsh Board of Health is the Department responsible for the administration of health and poor law matters in Wales and a separate section in the Report is devoted to that country while separate statistics are provided.

Roy. 8vo. xi + 318 pages.

## EXPLANATORY STATEMENT

TABLE I shows, for London and the County Boroughs and those urban districts with resident populations exceeding 50,000 at the last Census, the number of births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday. The births relate to those registered in the area, but include births occurring in municipal maternity hospitals situate outside the area to which they belong.

The deaths are exclusive of non-residents but corrected as far as possible by the inclusion of deaths of residents in other areas. The deaths in Edinburgh and Glasgow are fully corrected for non-residents; those in Dublin and Belfast are corrected by the exclusion of deaths of non-residents occurring in public institutions.

TABLE 2 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for the previous year.

TABLE 3 is a summary of cases of certain specified infectious diseases in England and Wales notifiable under the general law or under orders made by the Local Government Board or Minister of Health and is based upon weekly returns received from the Medical Officers of Health of all Local (and Port) Health Authorities.

The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are *omitted* from this Summary.

TABLE 3A is similar to Table 3, but relates to the returns received too late for inclusion in Table 3 of the previous week. It includes revised figures for England and Wales as a whole for that week.

TABLE 4 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for the previous year.

TABLE 5 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 6 is a Report of the meteorological observations taken at Greenwich on each day of the week.

Summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, are published in the Registrar-General's Quarterly Return and the Statistical Review (Part I).

## NOTES FOR THE WEEK ENDED 22nd OCTOBER, 1938

### BIRTHS AND DEATHS.

In the 126 **County Boroughs and Great Towns** of England and Wales the live births registered in the forty-second week of the year numbered 6,663 corresponding to an annual rate of 16.4 per 1,000 living: stillbirths numbered 255 corresponding to a rate of 37 per 1,000 total births registered (including stillborn): the deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 4,086 (110 less than in the preceding week).

Infant mortality based on the average weekly number of live births during the last 52 weeks, was 44 against 48, 48, and 47 in the preceding three weeks.

In **London** (Administrative County including the City of London) there were 1,266 live births registered corresponding to an annual rate of 16.1 per 1,000 living: stillbirths numbered 40 corresponding to a rate of 31 per 1,000 total births (including stillborn): the deaths (excluding stillbirths) numbered 764 (19 more than in the preceding week): infant mortality, based on the average weekly number of live births during the last 52 weeks, was 34, against 31, 35 and 35 in the preceding three weeks.

**Table 3.—Notifications of Infectious Diseases.**

**Number of cases notified in the week ended 22nd October, 1938, in Administrative Areas and Port Health Districts with Summary for England and Wales**

*Note.*—Where no return has been received a \* is inserted in the columns. Totals shown against the names of Counties include any associated County Boroughs. The letters in the last column denote the following diseases :—A, Cholera; B, Plague; C, Puerperal fever (London A. C. only); D, Cerebro-spinal fever; E, Acute poliomyelitis; F, Acute poli-encephalitis; G, Acute encephalitis lethargica; H, Typhus fever; I, Relapsing fever; J, Continued fever (London A. C. only); L, Dysentery; M, Ophthalmia neonatorum; N, Puerperal pyrexia†.

† By virtue of the Public Health Act, 1936, in all areas outside London A. C., conditions notifiable as puerperal fever prior to the 1st October, 1937, are, from that date, notifiable as and included with notifications of puerperal pyrexia.

**Summary.**

	Small-pox.	Scarlet fever.	Diphtheria.	Enteric (typhoid and paratyphoid) fever.	Acute pneumonia (primary or influenzal).	Cholera.	Plague.	Puerperal fever (London A. C. only).	Cerebro-spinal fever.	Acute poliomyelitis.	Acute poli-encephalitis.	Acute encephalitis lethargica.	Typhus fever.	Relapsing fever.	Continued fever (London A. C. only).	Dysentery.	Ophthalmia neonatorum.	Puerperal pyrexia.†

\* The figures in this Table relate to the areas as constituted at the date of the weekly returns no corrections having been made for changes in boundary. The live births are derived from the weekly returns furnished by the Registrars and differ from those published for the towns in the Quarterly Return which are corrected for births occurring away from the usual residence of the parents.

† The figures for the Great Towns in the weekly columns relate to 126 Towns. The comparable totals for the years 1937 and 1938 in the last two columns, are in respect of 122 Towns to the end of March and 124 Towns thereafter.

25

The results apply to the Civil Day, or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "higher" and - "lower" than the average.

The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined.

The numbers in column 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer decreased from 29.85 ins. at the beginning of the week to 29.53 ins. by 6h. on Oct. 18th; increased to 30.17 ins. by 10h. on Oct. 20th; decreased to 29.65 ins. by 16h. on Oct. 22nd; increased and was 29.68 ins. by midnight on the same day.

Discontinued.

## CENSUS OF ENGLAND AND WALES, 1931

Census volumes in respect of the counties of England and Wales have now been published

Parts I of the series, which are complete, relate to the areas as constituted at the date of the Census. Parts II will deal with the changes in boundary effected by County schemes under the Local Government Act of 1929, and will provide a limited range of statistics in respect of the newly constituted areas.

Sectional volumes presenting the results of the census of industries, occupations, etc. are also available, and particulars will be furnished on application.

## 19TH ANNUAL REPORT, 1937-38

Cmd. 5801

A record of the progress made during the year towards a fitter nation. A steady advance in the provision of improved environmental conditions, particularly in rural areas, the extension of existing and the provision of new medical and welfare services are reported. The rates of maternal mortality, infantile death and death from tuberculosis all show decreases and the health services provided by Local Authorities have contributed largely to these improvements.

Every aspect of health and its contributory factors are dealt with in the Report which comprises 230 pages of text with a further 88 pages of statistical appendices and an index.

The main sections are :

General

Public Health

Public Assistance

Housing and Town Planning

Local Government

National Health Insurance and Pensions.

The Welsh Board of Health is the Department responsible for the administration of health and poor law matters in Wales and a separate section in the Report is devoted to that country while separate statistics are provided.

Roy. 8vo. xi + 318 pages.

## EXPLANATORY STATEMENT

TABLE I shows, for London and the County Boroughs and those urban districts with resident populations exceeding 50,000 at the last Census, the number of births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday. The births relate to those registered in the area, but include births occurring in municipal maternity hospitals situate outside the area to which they belong.

The deaths are exclusive of non-residents but corrected as far as possible by the inclusion of deaths of residents in other areas. The deaths in Edinburgh and Glasgow are fully corrected for non-residents; those in Dublin and Belfast are corrected by the exclusion of deaths of non-residents occurring in public institutions.

TABLE 2 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for the previous year.

TABLE 3 is a summary of cases of certain specified infectious diseases in England and Wales notifiable under the general law or under orders made by the Local Government Board or Minister of Health and is based upon weekly returns received from the Medical Officers of Health of all Local (and Port) Health Authorities.

The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are *omitted* from this Summary.

TABLE 3A is similar to Table 3, but relates to the returns received too late for inclusion in Table 3 of the previous week. It includes revised figures for England and Wales as a whole for that week.

TABLE 4 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for the previous year.

TABLE 5 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 6 is a Report of the meteorological observations taken at Greenwich on each day of the week.

Summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, are published in the Registrar-General's Quarterly Return and the Statistical Review (Part I).

## NOTES FOR THE WEEK ENDED 29th OCTOBER, 1938

### BIRTHS AND DEATHS.

In the 126 County Boroughs and Great Towns of England and Wales the live births registered in the forty-third week of the year numbered 6,247 corresponding to an annual rate of 15.3 per 1,000 living: stillbirths numbered 250 corresponding to a rate of 38 per 1,000 total births registered (including stillborn): the deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 4,226 (140 more than in the preceding week).

Infant mortality based on the average weekly number of live births during the last 52 weeks, was 43 against 48, 47, and 44 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,116 live births registered corresponding to an annual rate of 14.2 per 1,000 living: stillbirths numbered 31 corresponding to a rate of 27 per 1,000 total births (including stillborn): the deaths (excluding stillbirths) numbered 834 (70 more than in the preceding week): infant mortality, based on the average weekly number of live births during the last 52 weeks, was 29, against 35, 35 and 34 in the preceding three weeks.

**Table 3.—Notifications of Infectious Diseases.**

**Number of cases notified in the week ended 29th October, 1938, in Administrative Areas and Port Health Districts with Summary for England and Wales**

*Note.*—Where no return has been received a \* is inserted in the columns. Totals shown against the names of Counties include any associated County Boroughs. The letters in the last column denote the following diseases :—A, Cholera ; B, Plague ; C, Puerperal fever (London A. C. only) ; D, Cerebro-spinal fever ; E, Acute poliomyelitis ; F, Acute polio-encephalitis ; G, Acute encephalitis lethargica ; H, Typhus fever ; I, Relapsing fever ; J, Continued fever (London A. C. only) ; L, Dysentery ; M, Ophthalmia neonatorum ; N, Puerperal pyrexia†.

† By virtue of the Public Health Act, 1936, in all areas outside London A. C., conditions notifiable as puerperal fever prior to the 1st October, 1937, are, from that date, notifiable as and included with notifications of puerperal pyrexia.

**Summary.**

	Small-pox.	Scarlet fever.	Diphtheria.	Enteric (typhoid and paratyphoid) fever.	Acute pneumonia (primary or influenzal).	Cholera.	Plague.	Puerperal fever (London A. C. only).	Cerebro-spinal fever.	Acute poliomyelitis.	Acute polioencephalitis.	Acute encephalitis lethargica.	Typhus fever.	Relapsing fever.	Continued fever (London A. C. only).	Dysentery.	Ophthalmia neonatorum.	Puerperal pyrexia.†

\* The figures in this Table relate to the areas as constituted at the date of the weekly returns no corrections having been made for changes in boundary. The live births are derived from the weekly returns furnished by the Registrars and differ from those published for the towns in the Quarterly Return which are corrected for births occurring away from the usual residence of the parents.

† The figures for the Great Towns in the weekly columns relate to 126 Towns. The comparable totals for the years 1937 and 1938 in the last two columns, are in respect of 122 Towns to the end of March and 124 Towns thereafter.

Discontinued.

The results apply to the Civil Day, or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "higher" and - "lower" than the average.

The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined.

The numbers in column 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine on each day.

The reading of the barometer increased from 29.68 ins. at the beginning of the week to 29.96 ins. by 9h. on Oct. 24th; decreased to 29.44 ins. by 5h. on Oct. 27th; increased to 29.83 ins. by 20h. on Oct. 28th; decreased and was 29.66 ins. by midnight on Oct. 29th.

## CENSUS OF ENGLAND AND WALES, 1931

Census volumes in respect of the counties of England and Wales have now been published.

Parts I of the series, which are complete, relate to the areas as constituted at the date of the Census. Parts II will deal with the changes in boundary effected by County schemes under the Local Government Act of 1929, and will provide a limited range of statistics in respect of the newly constituted areas.

Sectional volumes presenting the results of the census of industries, occupations, etc. are also available, and particulars will be furnished on application.

# MINISTRY OF HEALTH

19TH ANNUAL REPORT, 1937-38

Cmd. 5801

A record of the progress made during the year towards a fitter nation. A steady advance in the provision of improved environmental conditions, particularly in rural areas, the extension of existing and the provision of new medical and welfare services are reported. The rates of maternal mortality, infantile death and death from tuberculosis all show decreases and the health services provided by Local Authorities have contributed largely to these improvements.

Every aspect of health and its contributory factors are dealt with in the Report which comprises 230 pages of text with a further 88 pages of statistical appendices and an index.

The main sections are:

- General
- Public Health
- Public Assistance
- Housing and Town Planning
- Local Government
- National Health Insurance and Pensions.

The Welsh Board of Health is the Department responsible for the administration of health and poor law matters in Wales and a separate section in the Report is devoted to that country while separate statistics are provided.

## EXPLANATORY STATEMENT

TABLE I shows, for London and the County Boroughs and those urban districts with resident populations exceeding 50,000 at the last Census, the number of births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday. The births relate to those registered in the area, but include births occurring in municipal maternity hospitals situate outside the area to which they belong.

The deaths are exclusive of non-residents but corrected as far as possible by the inclusion of deaths of residents in other areas. The deaths in Edinburgh and Glasgow are fully corrected for non-residents; those in Dublin and Belfast are corrected by the exclusion of deaths of non-residents occurring in public institutions.

TABLE 2 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for the previous year.

TABLE 3 is a summary of cases of certain specified infectious diseases in England and Wales notifiable under the general law or under orders made by the Local Government Board or Minister of Health and is based upon weekly returns received from the Medical Officers of Health of all Local (and Port) Health Authorities.

The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are *omitted* from this Summary.

TABLE 3A is similar to Table 3, but relates to the returns received too late for inclusion in Table 3 of the previous week. It includes revised figures for England and Wales as a whole for that week.

TABLE 4 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for the previous year.

TABLE 5 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 6 is a Report of the meteorological observations taken at Greenwich on each day of the week.

Summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, are published in the Registrar-General's Quarterly Return and the Statistical Review (Part I).

## NOTES FOR THE WEEK ENDED 5th NOVEMBER, 1938

### BIRTHS AND DEATHS.

In the 126 **County Boroughs and Great Towns** of England and Wales the live births registered in the forty-fourth week of the year numbered 6,677 corresponding to an annual rate of 16.4 per 1,000 living: stillbirths numbered 266 corresponding to a rate of 38 per 1,000 total births registered (including stillborn): the deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 4,380 (151 more than in the preceding week).

Infant mortality based on the average weekly number of live births during the last 52 weeks, was 44 against 47, 44, and 43 in the preceding three weeks.

In **London** (Administrative County including the City of London) there were 1,275 live births registered corresponding to an annual rate of 16.2 per 1,000 living: stillbirths numbered 36 corresponding to a rate of 27 per 1,000 total births (including stillborn): the deaths (excluding stillbirths) numbered 841 (7 more than in the preceding week): infant mortality, based on the average weekly number of live births during the last 52 weeks, was 33, against 35, 34 and 29 in the preceding three weeks.

### CORRIGENDA

REGISTRAR GENERAL'S WEEKLY RETURN, No. 43.

Week ended 29th October, 1938.

#### TABLE 3.

- Page 1139. Gloucester County total should read:—  
64 Scarlet fever.  
Administrative County total should read:—  
18 Scarlet fever.
- Page 1143. Castle Ward Rural District, Pneumonia should read—nil.
- Page 1145. Surrey. Administrative County total should read:—  
44 Scarlet fever.

Table 3.—Notifications of Infectious Diseases.

Number of cases notified in the week ended 5th November, 1938, in Administrative Areas and Port Health Districts with Summary for England and Wales.

*Note.*—Where no return has been received a \* is inserted in the columns. Totals shown against the names of Counties include any associated County Boroughs. The letters in the last column denote the following diseases:—A, Cholera; B, Plague; C, Puerperal fever (London A. C. only); D, Cerebro-spinal fever; E, Acute poliomyelitis; F, Acute polio-encephalitis; G, Acute encephalitis lethargica; H, Typhus fever; I, Relapsing fever; J, Continued fever (London A. C. only); L, Dysentery; M, Ophthalmia neonatorum; N, Puerperal pyrexia†.

† By virtue of the Public Health Act, 1936, in all areas outside London A. C., conditions notifiable as puerperal fever prior to the 1st October, 1937, are, from that date, notifiable as and included with notifications of puerperal pyrexia.

## Summary.

	Small-pox.	Scarlet fever.	Diphtheria.	Enteric (typhoid and paratyphoid) fever.	Acute pneumonia (primary or influenzal).	Cholera.	Plague.	Puerperal fever (London A. C. only).	Cerebro-spinal fever.	Acute poliomyelitis.	Acute polioencephalitis.	Acute encephalitis lethargica.	Typhus fever.	Relapsing fever.	Continued fever (London A. C. only).	Dysentery.	Ophthalmia neonatorum.	Puerperal pyrexia.†

\* The figures in this Table relate to the areas as constituted at the date of the weekly returns no corrections having been made for changes in boundary. The live births are derived from the weekly returns furnished by the Registrars and differ from those published for the towns in the Quarterly Return which are corrected for births occurring away from the usual residence of the parents.

† The figures for the Great Towns in the weekly columns relate to 126 Towns. The comparable totals for the years 1937 and 1938 in the last two columns, are in respect of 122 Towns to the end of March and 124 Towns thereafter.

The results apply to the Civil Day, or from midnight to midnight, Greenwich Mean time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "*higher*" and - "*lower*" than the average.

The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined.

The numbers in column 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer decreased from 29.66 ins. at the beginning of the week to 29.57 ins. by 8h. on Oct. 30th; increased to 29.84 ins. by 11h. on Oct. 31st; decreased to 29.39 ins. by 9h. on Nov. 1st; increased to 29.82 ins. by 10h. on Nov. 3rd; decreased to 29.66 ins. by 4h. on Nov. 4th; increased and was 30.08 ins. by midnight on Nov. 5th.

The results apply to the Civil Day, or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "higher," and - "lower" than the average.

The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined.

The numbers in column 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer decreased from 29.66 ins. at the beginning of the week to 29.57 ins. by 8h. on Oct. 30th; increased to 29.84 ins. by 11h. on Oct. 31st; decreased to 29.39 ins. by 9h. on Nov. 1st; increased to 29.82 ins. by 16h. on Nov. 3rd; decreased to 29.66 ins. by 5h. on Nov. 4th; increased and was 30.08 ins. by midnight on Nov. 5th.

## CENSUS OF ENGLAND AND WALES, 1931

Census volumes in respect of the counties of England and Wales have now been published

Parts I of the series, which are complete, relate to the areas as constituted at the date of the Census. Parts II will deal with the changes in boundary effected by County schemes under the Local Government Act of 1929, and will provide a limited range of statistics in respect of the newly constituted areas.

Sectional volumes presenting the results of the census of industries, occupations, etc. are also available, and particulars will be furnished on application.

## 19TH ANNUAL REPORT, 1937-38

Cmd. 5801

A record of the progress made during the year towards a fitter nation. A steady advance in the provision of improved environmental conditions, particularly in rural areas, the extension of existing and the provision of new medical and welfare services are reported. The rates of maternal mortality, infantile death and death from tuberculosis all show decreases and the health services provided by Local Authorities have contributed largely to these improvements.

Every aspect of health and its contributory factors are dealt with in the Report which comprises 230 pages of text with a further 88 pages of statistical appendices and an index.

The main sections are :

General  
Public Health  
Public Assistance  
Housing and Town Planning  
Local Government  
National Health Insurance and Pensions.

The Welsh Board of Health is the Department responsible for the administration of health and poor law matters in Wales and a separate section in the Report is devoted to that country while separate statistics are provided.

## EXPLANATORY STATEMENT

TABLE I shows, for London and the County Boroughs and those urban districts with resident populations exceeding 50,000 at the last Census, the number of births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday. The births relate to those registered in the area, but include births occurring in municipal maternity hospitals situate outside the area to which they belong.

The deaths are exclusive of non-residents but corrected as far as possible by the inclusion of deaths of residents in other areas. The deaths in Edinburgh and Glasgow are fully corrected for non-residents; those in Dublin and Belfast are corrected by the exclusion of deaths of non-residents occurring in public institutions.

TABLE 2 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for the previous year.

TABLE 3 is a summary of cases of certain specified infectious diseases in England and Wales notifiable under the general law or under orders made by the Local Government Board or Minister of Health and is based upon weekly returns received from the Medical Officers of Health of all Local (and Port) Health Authorities.

The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are *omitted* from this Summary.

TABLE 3A is similar to Table 3, but relates to the returns received too late for inclusion in Table 3 of the previous week. It includes revised figures for England and Wales as a whole for that week.

TABLE 4 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for the previous year.

TABLE 5 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 6 is a Report of the meteorological observations taken at Greenwich on each day of the week.

Summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, are published in the Registrar-General's Quarterly Return and the Statistical Review (Part I).

## NOTES FOR THE WEEK ENDED 12th NOVEMBER, 1938

### BIRTHS AND DEATHS.

In the 126 **County Boroughs and Great Towns** of England and Wales the live births registered in the forty-fifth week of the year numbered 6,376 corresponding to an annual rate of 15.7 per 1,000 living: stillbirths numbered 245 corresponding to a rate of 37 per 1,000 total births registered (including stillborn): the deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 4,237 (143 less than in the preceding week).

Infant mortality based on the average weekly number of live births during the last 52 weeks, was 44 against 44, 43, and 44 in the preceding three weeks.

In **London** (Administrative County including the City of London) there were 1,223 live births registered corresponding to an annual rate of 15.6 per 1,000 living: stillbirths numbered 41 corresponding to a rate of 32 per 1,000 total births (including stillborn): the deaths (excluding stillbirths) numbered 781 (60 less than in the preceding week): infant mortality, based on the average weekly number of live births during the last 52 weeks, was 34, against 34, 29 and 33 in the preceding three weeks.

### Annual Death-Rates.

Table 3.—Notifications of Infectious Diseases.

Number of cases notified in the week ended 12th November, 1938, in Administrative Areas and Port Health Districts with Summary for England and Wales.

*Note.*—Where no return has been received a \* is inserted in the columns. Totals shown against the names of Counties include any associated County Boroughs. The letters in the last column denote the following diseases:—A, Cholera; B, Plague; C, Puerperal fever (London A. C. only); D, Cerebro-spinal fever; E, Acute poliomyelitis; F, Acute polio-encephalitis; G, Acute encephalitis lethargica; H, Typhus fever; I, Relapsing fever; J, Continued fever (London A. C. only); L, Dysentery; M, Ophthalmia neonatorum; N, Puerperal pyrexia†.

† By virtue of the Public Health Act, 1936, in all areas outside London A. C., conditions notifiable as puerperal fever prior to the 1st October, 1937, are, from that date, notifiable as and included with notifications of puerperal pyrexia.

## Summary.

	Small-pox.	Scarlet fever.	Diphtheria.	Enteric (typhoid and paratyphoid) fever.	Acute pneumonia (primary or influenzal).	Cholera.	Plague.	Puerperal fever (London A. C. only).	Cerebro-spinal fever.	Acute poliomyelitis.	Acute polioencephalitis.	Acute encephalitis lethargica.	Typhus fever.	Relapsing fever.	Continued fever (London A. C. only).	Dysentery.	Ophthalmia neonatorum.	Puerperal pyrexia.†

\* The figures in this Table relate to the areas as constituted at the date of the weekly returns no corrections having been made for changes in boundary. The live births are derived from the weekly returns furnished by the Registrars and differ from those published for the towns in the Quarterly Return which are corrected for births occurring away from the usual residence of the parents.

† The figures for the Great Towns in the weekly columns relate to 126 Towns. The comparable totals for the years 1937 and 1938 in the last two columns, are in respect of 122 Towns to the end of March and 124 Towns thereafter.

The results apply to the Civil Day, or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.
Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.
The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates " <i>higher</i> ," and - " <i>lower</i> ," than the average.
The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined.
The numbers in column 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of <i>bright</i> sunshine on each day.
The reading of the barometer increased from 30.08 ins. at the beginning of the week to 30.11 ins. by 11h. on Nov. 6th; decreased to 29.54 ins. by 13h. on Nov. 11th; increased and was 29.78 ins. by midnight on Nov. 12th.

The results apply to the Civil Day, or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. a.m., noon, 3h. p.m., and 9h. p.m. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1903, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "higher" and - "lower" than the average.

The values given in column 10 are not corrected for the index error of the thermometer, which cannot be determined.

The numbers in column 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine on each day.

The reading of the barometer increased from 30.08 ins. at the beginning of the week to 30.11 ins. by 11h. on Nov. 6th; decreased to 29.54 ins. by 13h. on Nov. 11th; increased and was 29.78 ins. by midnight on Nov. 12th.

## CENSUS OF ENGLAND AND WALES, 1931

Census volumes in respect of the counties of England and Wales have now been published

Parts I of the series, which are complete, relate to the areas as constituted at the date of the Census. Parts II will deal with the changes in boundary effected by County schemes under the Local Government Act of 1929, and will provide a limited range of statistics in respect of the newly constituted areas.

Sectional volumes presenting the results of the census of industries, occupations, etc. are also available, and particulars will be furnished on application.

## 19TH ANNUAL REPORT, 1937-38

### Cmd. 5801

A record of the progress made during the year towards a fitter nation. A steady advance in the provision of improved environmental conditions, particularly in rural areas, the extension of existing and the provision of new medical and welfare services are reported. The rates of maternal mortality, infantile death and death from tuberculosis all show decreases and the health services provided by Local Authorities have contributed largely to these improvements.

Every aspect of health and its contributory factors are dealt with in the Report which comprises 230 pages of text with a further 88 pages of statistical appendices and an index.

The main sections are :

General  
Public Health  
Public Assistance  
Housing and Town Planning  
Local Government  
National Health Insurance and Pensions.

The Welsh Board of Health is the Department responsible for the administration of health and poor law matters in Wales and a separate section in the Report is devoted to that country while separate statistics are provided.

## EXPLANATORY STATEMENT

TABLE I shows, for London and the County Boroughs and those urban districts with resident populations exceeding 50,000 at the last Census, the number of births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday. The births relate to those registered in the area, but include births occurring in municipal maternity hospitals situate outside the area to which they belong.

The deaths are exclusive of non-residents but corrected as far as possible by the inclusion of deaths of residents in other areas. The deaths in Edinburgh and Glasgow are fully corrected for non-residents; those in Dublin and Belfast are corrected by the exclusion of deaths of non-residents occurring in public institutions.

TABLE 2 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for the previous year.

TABLE 3 is a summary of cases of certain specified infectious diseases in England and Wales notifiable under the general law or under orders made by the Local Government Board or Minister of Health and is based upon weekly returns received from the Medical Officers of Health of all Local (and Port) Health Authorities.

The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are *omitted* from this Summary.

TABLE 3A is similar to Table 3, but relates to the returns received too late for inclusion in Table 3 of the previous week. It includes revised figures for England and Wales as a whole for that week.

TABLE 4 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for the previous year.

TABLE 5 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 6 is a Report of the meteorological observations taken at Greenwich on each day of the week.

Summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, are published in the Registrar-General's Quarterly Return and the Statistical Review (Part I).

## NOTES FOR THE WEEK ENDED 19th NOVEMBER, 1938

### BIRTHS AND DEATHS.

In the 126 **County Boroughs and Great Towns** of England and Wales the live births registered in the forty-sixth week of the year numbered 6,388 corresponding to an annual rate of 15.7 per 1,000 living: stillbirths numbered 273 corresponding to a rate of 41 per 1,000 total births registered (including stillborn): the deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 4,274 (37 more than in the preceding week).

Infant mortality based on the average weekly number of live births during the last 52 weeks, was 49 against 43, 44, and 44 in the preceding three weeks.

In **London** (Administrative County including the City of London) there were 1,208 live births registered corresponding to an annual rate of 15.4 per 1,000 living: stillbirths numbered 30 corresponding to a rate of 24 per 1,000 total births (including stillborn): the deaths (excluding stillbirths) numbered 805 (24 more than in the preceding week): infant mortality, based on the average weekly number of live births during the last 52 weeks, was 34, against 29, 33 and 34 in the preceding three weeks.

Table 3.—Notifications of Infectious Diseases.

Number of cases notified in the week ended 19th November, 1938, in Administrative Areas and Port Health Districts with Summary for England and Wales.

*Note.*—Where no return has been received a \* is inserted in the columns. Totals shown against the names of Counties include any associated County Boroughs. The letters in the last column denote the following diseases :—A, Cholera ; B, Plague ; C, Puerperal fever (London A. C. only) ; D, Cerebro-spinal fever ; E, Acute poliomyelitis ; F, Acute polio-encephalitis ; G, Acute encephalitis lethargica ; H, Typhus fever ; I, Relapsing fever ; J, Continued fever (London A. C. only) ; L, Dysentery ; M, Ophthalmia neonatorum ; N, Puerperal pyrexia†.

† By virtue of the Public Health Act, 1936, in all areas outside London A. C., conditions notifiable as puerperal fever prior to the 1st October, 1937, are, from that date, notifiable as and included with notifications of puerperal pyrexia.

Summary.

	Small-pox.	Scarlet fever.	Diphtheria.	Enteric (typhoid and paratyphoid) fever.	Acute pneumonia (primary or influenza).	Cholera.	Plague.	Puerperal fever (London A. C. only).	Cerebro-spinal fever.	Acute poliomyelitis.	Acute polioencephalitis.	Acute encephalitis lethargica.	Typhus fever.	Relapsing fever.	Continued fever (London A. C. only).	Dysentery.	Ophthalmia neonatorum.	Puerperal pyrexia.†

\* The figures in this Table relate to the areas as constituted at the date of the weekly returns no corrections having been made for changes in boundary. The live births are derived from the weekly returns furnished by the Registrars and differ from those published for the towns in the Quarterly Return which are corrected for births occurring away from the usual residence of the parents.

† The figures for the Great Towns in the weekly columns relate to 126 Towns. The comparable totals for the years 1937 and 1938 in the last two columns, are in respect of 122 Towns to the end of March and 124 Towns thereafter.

**Table 5.—Meteorology in certain Towns during the Week ended Saturday, 19th November, 1938.**

DATE.		ATMOSPHERIC ELECTRICITY. (For explanation of symbols, see Note.)	Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
NOVEMBER, 1938.					
Sunday	... 13		0.0	9.0	Overcast or nearly so. Drizzle or slight rain 15h. till 20 h. Fresh wind throughout.
Monday	... 14		0.0	9.0	Nearly overcast till 9h., cloudy till 13h., then clearing to cloudless by 17h. Clouding after 23h. Drizzle 3h. till 3½h. Mist in evening, becoming foggy about midnight.
Tuesday	... 15		0.0	8.9	Foggy throughout, damping 18h. till 21h.
Wednesday	... 16		0.0	8.9	Overcast; fog till 4h., then mist or slight mist. Rain or slight rain 14½h. till 16½h.
Thursday	... 17		0.1	8.8	Overcast or nearly so. Slight mist in morning.
Friday	... 18		0.1	8.8	Overcast or nearly so. Mist in morning. Drizzle about 17h., and rain 21½h., till 22½h.
Saturday	... 19		4.0	8.7	Overcast till 7h., cloudless till 11h., thin cloud till 17h. then variably cloudy. Rain, heavy at first, 1½h., till 4h. Solar halo 12½h. till 13½h.
No. of Column		25	Sum 4.2	Sum 62.1	

Discontinued.

The results apply to the Civil Day, or from midnight to midnight, Greenwich Mean Time. The height of the easter of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.	Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.	The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "higher" and - "lower" than the average.	The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined.	The numbers in column 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine on each day.	The reading of the barometer increased from 29.78 ins. at the beginning of the week to 30.25 ins. by 10h. on Nov. 15th; decreased to 30.00 ins. by 3h. on Nov. 17th; increased to 30.08 ins. by 10h. on Nov. 18th; decreased to 29.53 ins. by 1h. on Nov. 19th; increased to 29.77 ins. by 11h. on Nov. 19th; decreased and was 29.72 ins. by midnight on the same day.
--	--	--	---	--	---

Discontinued.

The results apply to the Civil Day, or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 0h. A.M., noon, 3h. P.M., and 0h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean readings of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "higher," and - "lower," than the average.

The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined.

The numbers in column 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer increased from 29.78 ins. at the beginning of the week to 30.25 ins. by 10h. on Nov. 15th; decreased to 30.00 ins. by 3h. on Nov. 17th; increased to 30.08 ins. by 0h. on Nov. 18th; decreased to 29.53 ins. by 1h. on Nov. 19th; increased to 29.77 ins. by 11h. on Nov. 19th; decreased and was 29.72 ins. by midnight on the same day.

## CENSUS OF ENGLAND AND WALES, 1931

Census volumes in respect of the counties of England and Wales have now been published

Parts I of the series, which are complete, relate to the areas as constituted at the date of the Census. Parts II will deal with the changes in boundary effected by County schemes under the Local Government Act of 1929, and will provide a limited range of statistics in respect of the newly constituted areas.

Sectional volumes presenting the results of the census of industries, occupations, etc. are also available, and particulars will be furnished on application.

## 19TH ANNUAL REPORT, 1937-38

Cmd. 5801

A record of the progress made during the year towards a fitter nation. A steady advance in the provision of improved environmental conditions, particularly in rural areas, the extension of existing and the provision of new medical and welfare services are reported. The rates of maternal mortality, infantile death and death from tuberculosis all show decreases and the health services provided by Local Authorities have contributed largely to these improvements.

Every aspect of health and its contributory factors are dealt with in the Report which comprises 230 pages of text with a further 88 pages of statistical appendices and an index.

The main sections are :

General

Public Health

Public Assistance

Housing and Town Planning

Local Government

National Health Insurance and Pensions.

The Welsh Board of Health is the Department responsible for the administration of health and poor law matters in Wales and a separate section in the Report is devoted to that country while separate statistics are provided.

## EXPLANATORY STATEMENT

TABLE I shows, for London and the County Boroughs and those urban districts with resident populations exceeding 50,000 at the last Census, the number of births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday. The births relate to those registered in the area, but include births occurring in municipal maternity hospitals situate outside the area to which they belong.

The deaths are exclusive of non-residents but corrected as far as possible by the inclusion of deaths of residents in other areas. The deaths in Edinburgh and Glasgow are fully corrected for non-residents; those in Dublin and Belfast are corrected by the exclusion of deaths of non-residents occurring in public institutions.

TABLE 2 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for the previous year.

TABLE 3 is a summary of cases of certain specified infectious diseases in England and Wales notifiable under the general law or under orders made by the Local Government Board or Minister of Health and is based upon weekly returns received from the Medical Officers of Health of all Local (and Port) Health Authorities.

The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are *omitted* from this Summary.

TABLE 3A is similar to Table 3, but relates to the returns received too late for inclusion in Table 3 of the previous week. It includes revised figures for England and Wales as a whole for that week.

TABLE 4 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for the previous year.

TABLE 5 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 6 is a Report of the meteorological observations taken at Greenwich on each day of the week.

Summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, are published in the Registrar-General's Quarterly Return and the Statistical Review (Part I).

## NOTES FOR THE WEEK ENDED 26th NOVEMBER, 1938

### BIRTHS AND DEATHS.

In the 126 **County Boroughs and Great Towns** of England and Wales the live births registered in the forty-seventh week of the year numbered 5,789 corresponding to an annual rate of 14.2 per 1,000 living: stillbirths numbered 256 corresponding to a rate of 42 per 1,000 total births registered (including stillborn): the deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 4,291 (17 more than in the preceding week).

Infant mortality based on the average weekly number of live births during the last 52 weeks, was 48 against 44, 44, and 49 in the preceding three weeks.

In **London** (Administrative County including the City of London) there were 1,145 live births registered corresponding to an annual rate of 14.6 per 1,000 living: stillbirths numbered 38 corresponding to a rate of 32 per 1,000 total births (including stillborn): the deaths (excluding stillbirths) numbered 824 (19 more than in the preceding week): infant mortality, based on the average weekly number of live births during the last 52 weeks, was 48, against 33, 34 and 34 in the preceding three weeks.

Table 3.—Notifications of Infectious Diseases.

Number of cases notified in the week ended 26th November, 1938, in Administrative Areas and Port Health Districts with Summary for England and Wales.

*Note.*—Where no return has been received a \* is inserted in the columns. Totals shown against the names of Counties include any associated County Boroughs. The letters in the last column denote the following diseases:—A, Cholera; B, Plague; C, Puerperal fever (London A. C. only); D, Cerebro-spinal fever; E, Acute poliomyelitis; F, Acute poli-encephalitis; G, Acute encephalitis lethargica; H, Typhus fever; I, Relapsing fever; J, Continued fever (London A. C. only); L, Dysentery; M, Ophthalmia neonatorum; N, Puerperal pyrexia†.

† By virtue of the Public Health Act, 1936, in all areas outside London A. C., conditions notifiable as puerperal fever prior to the 1st October, 1937, are, from that date, notifiable as and included with notifications of puerperal pyrexia.

Summary.

	Small-pox.	Scarlet fever.	Diphtheria.	Enteric (typhoid and paratyphoid) fever.	Acute pneumonia (primary or influenzal).	Cholera.	Plague.	Puerperal fever (London A. C. only).	Cerebro-spinal fever.	Acute poliomyelitis.	Acute poli-encephalitis.	Acute encephalitis lethargica.	Typhus fever.	Relapsing fever.	Continued fever (London A. C. only).	Dysentery.	Ophthalmia neonatorum.	Puerperal pyrexia.†

\* The figures in this Table relate to the areas as constituted at the date of the weekly returns no corrections having been made for changes in boundary. The live births are derived from the weekly returns furnished by the Registrars and differ from those published for the towns in the Quarterly Return which are corrected for births occurring away from the usual residence of the parents.

† The figures for the Great Towns in the weekly columns relate to 126 Towns. The comparable totals for the years 1937 and 1938 in the last two columns, are in respect of 122 Towns to the end of March and 124 Towns thereafter.

**Table 5.—Meteorology in certain Towns during the Week ended Saturday, 26th November, 1938.**

DATE.		ATMOSPHERIC ELECTRICITY. (For explanation of symbols, see Note.)	Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
NOVEMBER, 1938.					
Sunday	20		0.0	8.7	Overcast till 19h., nearly cloudless by 19½h. Cloudy from 21h. Rain or slight rain 3½h. till 7½h.; slight rain 14½h. till 14½h., then rain till 19h.
Monday	21		0.0	8.6	Few clouds till 7h., then sky veiled. Overcast from 16h. Hoar frost in morning. Solar halo 9h. till 13h. Mist 9h. till 18h., then thick fog, clearing from 22h. Rain from 23½h.
Tuesday	22		3.9	8.6	Overcast till 8h., few clouds till 15h., then cloudy. Overcast from 22½h. Rain till 0½h. Mist till 11h.
Wednesday	23		0.3	8.5	Overcast till 9h., then variably cloudy. Rain 3h. till 3½h.; slight rain till 5h. Squally rain 13½h. till 16½h. Wind rising from 7h., strong wind 9h. till 18h., moderate gale between 11h. and 15h.
Thursday	24	Discontinued.	1.7	8.5	Cloudy till 12h., then little cloud. Cloudy 17h. till 19h., then overcast. Clearing from 22h. Fog 7h. till 11h.
Friday	25		0.3	8.4	Cloudless till 3h., overcast by 4h. Rain 6h. till 7h., and from 18½h., heavy at times. Fresh wind from 21h.
Saturday	26		2.2	8.4	Overcast till 8h., then few clouds. Cloudy 11h. till 15h., cloudless by 16h. Rain till 3½h. Hoar frost at night. Bright partiella at 11h. Strong wind till 6h.
No. of Column		25	Sum 8.4	Sum 59.7	27

The results apply to the Civil Day, or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "higher," and - "lower," than the average.

The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined. The numbers in column 26 derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer decreased from 29.72 ins. at the beginning of the week to 29.11 ins. by 20h. on Nov. 20th; increased to 29.20 ins. by 2h. on Nov. 21st; decreased to 28.97 ins. by 1h. on Nov. 22nd; increased to 29.31 ins. by 17h. on Nov. 22nd; decreased to 28.79 ins. by 9h. on Nov. 23rd; increased to 29.07 ins. by 2h. on Nov. 25th; decreased to 29.08 ins. by 3h. on Nov. 26th; increased and was 29.70 ins. by midnight on the same day.

## CENSUS OF ENGLAND AND WALES, 1931

Census volumes in respect of the counties of England and Wales have now been published

Parts I of the series, which are complete, relate to the areas as constituted at the date of the Census. Parts II will deal with the changes in boundary effected by County schemes under the Local Government Act of 1929, and will provide a limited range of statistics in respect of the newly constituted areas.

Sectional volumes presenting the results of the census of industries, occupations, etc. are also available, and particulars will be furnished on application.

# BETTER HEALTH

Whitefriars House, 68, Fleet Street, London, E.C.4.

The Official Journal of the Central Council for Health Education. It is intended to carry simple, non-technical and accurate teaching on the prevention of disease into the homes of the people. With the assistance of upwards of 150 health departments, the circulation has now reached 300,000 copies per month.

Quantities are supplied at special prices for local distribution. Write for specimen copy and particulars.

## The Registrar-General's Decennial Supplement, England and Wales, 1931, Part IIa, Occupational Mortality

An analysis of the occupational mortality of England and Wales in the three years 1930 to 1932.

The present Report covers a wider field than any previous one, in that it deals not merely with the mortality experienced by men in different occupations, but also with the mortality experienced by the wives of these men, and with that experienced by single women engaged in the same and other occupations. Furthermore, it introduces for the first time comparisons of mortalities according to social class and sex, sub-classified according to regions of the country, and also a study of the mortality of children aged 1 to 2 according to the occupation and social class of the parents in addition to the analysis of infant mortality under 1 year repeated from previous Reports.

Statistics are presented for 360 occupational groups of men and 77 of married women analysed at separate ages from more than 50 causes of death; 70 occupations of single women are included with 23 separate causes of death, deaths of infants and young children are analysed from 16 or more causes.

## EXPLANATORY STATEMENT

TABLE I shows, for London and the County Boroughs and those urban districts with resident populations exceeding 50,000 at the last Census, the number of births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday. The births relate to those registered in the area, but include births occurring in municipal maternity hospitals situate outside the area to which they belong.

The deaths are exclusive of non-residents but corrected as far as possible by the inclusion of deaths of residents in other areas. The deaths in Edinburgh and Glasgow are fully corrected for non-residents; those in Dublin and Belfast are corrected by the exclusion of deaths of non-residents occurring in public institutions.

TABLE 2 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for the previous year.

TABLE 3 is a summary of cases of certain specified infectious diseases in England and Wales notifiable under the general law or under orders made by the Local Government Board or Minister of Health and is based upon weekly returns received from the Medical Officers of Health of all Local (and Port) Health Authorities.

The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are *omitted* from this Summary.

TABLE 3A is similar to Table 3, but relates to the returns received too late for inclusion in Table 3 of the previous week. It includes revised figures for England and Wales as a whole for that week.

TABLE 4 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for the previous year.

TABLE 5 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 6 is a Report of the meteorological observations taken at Greenwich on each day of the week.

Summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, are published in the Registrar-General's Quarterly Return and the Statistical Review (Part I).

## NOTES FOR THE WEEK ENDED 3rd DECEMBER, 1938

### BIRTHS AND DEATHS.

In the 126 County Boroughs and Great Towns of England and Wales the live births registered in the forty-eighth week of the year numbered 6,073 corresponding to an annual rate of 14.9 per 1,000 living: stillbirths numbered 245 corresponding to a rate of 39 per 1,000 total births registered (including stillborn): the deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 4,574 (283 more than in the preceding week).

Infant mortality based on the average weekly number of live births during the last 52 weeks, was 58 against 44, 49, and 48 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,146 live births registered corresponding to an annual rate of 14.6 per 1,000 living: stillbirths numbered 32 corresponding to a rate of 27 per 1,000 total births (including stillborn): the deaths (excluding stillbirths) numbered 878 (54 more than in the preceding week): infant mortality, based on the average weekly number of live births during the last 52 weeks, was 54, against 34, 34 and 48 in the preceding three weeks.

Table 3.—Notifications of Infectious Diseases.

Number of cases notified in the week ended 3rd December, 1938, in Administrative Areas and Port Health Districts with Summary for England and Wales.

*Note.*—Where no return has been received a \* is inserted in the columns. Totals shown against the names of Counties include any associated County Boroughs. The letters in the last column denote the following diseases:—A, Cholera; B, Plague; C, Puerperal fever (London A. C. only); D, Cerebro-spinal fever; E, Acute poliomyelitis; F, Acute poli-encephalitis; G, Acute encephalitis lethargica; H, Typhus fever; I, Relapsing fever; J, Continued fever (London A. C. only); L, Dysentery; M, Ophthalmia neonatorum; N, Puerperal pyrexia†.

† By virtue of the Public Health Act, 1936, in all areas outside London A. C., conditions notifiable as puerperal fever prior to the 1st October, 1937, are, from that date, notifiable as and included with notifications of puerperal pyrexia.

## Summary.

Table 3.—Notifications of Infectious Diseases—continued

	Small-pox.	Scarlet fever.	Diphtheria.	Enteric (typhoid & paratyphoid) fever.	Acute pneumonia (prim'ry or influenz' l).	Other diseases (see note at head of table).		Small-pox.	Scarlet fever.	Diphtheria.	Enteric (typhoid & paratyphoid) fever.	Acute pneumonia (prim'ry or influenz' l).	Other diseases (see note at head of table).

\* The figures in this Table relate to the areas as constituted at the date of the weekly returns no corrections having been made for changes in boundary. The live births are derived from the weekly returns furnished by the Registrars and differ from those published for the towns in the Quarterly Return which are corrected for births occurring away from the usual residence of the parents.

† The figures for the Great Towns in the weekly columns relate to 126 Towns. The comparable totals for the years 1937 and 1938 in the last two columns, are in respect of 122 Towns to the end of March and 124 Towns thereafter.

Saturday	... 3		3.5	8.2	Little cloud by 9 <sup>4</sup> h. Slight mist till 13 <sup>4</sup> h., mist till 18h., then fog. Hoar frost at night.
No. of Column		23	Sum 19.4	Sum 57.8	27

The results apply to the Civil Day, or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. a.m., noon, 3h. p.m., and 9h. p.m. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1903, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "higher," and - "lower" than the average.

The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined.

The numbers in column 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer increased from 29.70 ins. at the beginning of the week to 29.81 ins. by 10h. on Nov. 27th; decreased to 29.39 ins. by 3h. on Nov. 28th; increased to 29.68 ins. by 19h. on Nov. 29th; decreased to 29.19 ins. by 12h. on Nov. 30th; increased to 29.31 ins. by 9h. on Dec. 1st; decreased to 29.14 ins. by 6h. on Dec. 1st; increased and was 29.93 ins. by midnight on Dec. 3rd.

## CENSUS OF ENGLAND AND WALES, 1931

Census volumes in respect of the counties of England and Wales have now been published.

Parts I of the series, which are complete, relate to the areas as constituted at the date of the Census. Parts II will deal with the changes in boundary effected by County schemes under the Local Government Act of 1929, and will provide a limited range of statistics in respect of the newly constituted areas.

Sectional volumes presenting the results of the census of industries, occupations, etc. are also available, and particulars will be furnished on application.

# The Registrar-General's Decennial Supplement, England and Wales, 1931, Part IIa, Occupational Mortality

An analysis of the occupational mortality of England and Wales in the three years 1930 to 1932.

The present Report covers a wider field than any previous one, in that it deals not merely with the mortality experienced by men in different occupations, but also with the mortality experienced by the wives of these men, and with that experienced by single women engaged in the same and other occupations. Furthermore, it introduces for the first time comparisons of mortalities according to social class and sex, sub-classified according to regions of the country, and also a study of the mortality of children aged 1 to 2 according to the occupation and social class of the parents in addition to the analysis of infant mortality under 1 year repeated from previous Reports.

Statistics are presented for 360 occupational groups of men and 77 of married women analysed at separate ages from more than 50 causes of death; 70 occupations of single women are included with 23 separate causes of death, deaths of infants and young children are analysed from 16 or more causes.

## EXPLANATORY STATEMENT

TABLE I shows, for London and the County Boroughs and those urban districts with resident populations exceeding 50,000 at the last Census, the number of births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday. The births relate to those registered in the area, but include births occurring in municipal maternity hospitals situate outside the area to which they belong.

The deaths are exclusive of non-residents but corrected as far as possible by the inclusion of deaths of residents in other areas. The deaths in Edinburgh and Glasgow are fully corrected for non-residents; those in Dublin and Belfast are corrected by the exclusion of deaths of non-residents occurring in public institutions.

TABLE 2 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for the previous year.

TABLE 3 is a summary of cases of certain specified infectious diseases in England and Wales notifiable under the general law or under orders made by the Local Government Board or Minister of Health and is based upon weekly returns received from the Medical Officers of Health of all Local (and Port) Health Authorities.

The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are *omitted* from this Summary.

TABLE 3A is similar to Table 3, but relates to the returns received too late for inclusion in Table 3 of the previous week. It includes revised figures for England and Wales as a whole for that week.

TABLE 4 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for the previous year.

TABLE 5 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 6 is a Report of the meteorological observations taken at Greenwich on each day of the week.

Summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, are published in the Registrar-General's Quarterly Return and the Statistical Review (Part I).

## NOTES FOR THE WEEK ENDED 10th DECEMBER, 1938

### BIRTHS AND DEATHS.

In the 126 County Boroughs and Great Towns of England and Wales the live births registered in the forty-ninth week of the year numbered 6,044 corresponding to an annual rate of 14.9 per 1,000 living: stillbirths numbered 253 corresponding to a rate of 40 per 1,000 total births registered (including stillborn): the deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 4,681 (107 more than in the preceding week).

Infant mortality based on the average weekly number of live births during the last 52 weeks, was 49 against 49, 48, and 58 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,101 live births registered corresponding to an annual rate of 14.0 per 1,000 living: stillbirths numbered 34 corresponding to a rate of 30 per 1,000 total births (including stillborn): the deaths (excluding stillbirths) numbered 852 (26 less than in the preceding week): infant mortality, based on the average weekly number of live births during the last 52 weeks, was 52, against 34, 48 and 54 in the preceding three weeks.

**Table 3.—Notifications of Infectious Diseases.**

**Number of cases notified in the week ended 10th December, 1938, in Administrative Areas and Port Health Districts with Summary for England and Wales.**

*Note.*—Where no return has been received a \* is inserted in the columns. Totals shown against the names of Counties include any associated County Boroughs. The letters in the last column denote the following diseases:—A, Cholera; B, Plague; C, Puerperal fever (London A. C. only); D, Cerebro-spinal fever; E, Acute poliomyelitis; F, Acute polio-encephalitis; G, Acute encephalitis lethargica; H, Typhus fever; I, Relapsing fever; J, Continued fever (London A. C. only); L, Dysentery; M, Ophthalmia neonatorum; N, Puerperal pyrexia†.

† By virtue of the Public Health Act, 1936, in all areas outside London A. C., conditions notifiable as puerperal fever prior to the 1st October, 1937, are, from that date, notifiable as and included with notifications of puerperal pyrexia.

**Summary.**

	Small-pox.	Scarlet fever.	Diphtheria.	Enteric (typhoid and paratyphoid) fever.	Acute pneumonia (primary or influenzal).	Cholera.	Plague.	Puerperal fever (London A. C. only).	Cerebro-spinal fever.	Acute poliomyelitis.	Acute polioencephalitis.	Acute encephalitis lethargica.	Typhus fever.	Relapsing fever.	Continued fever (London A. C. only).	Dysentery.	Ophthalmia neonatorum.	Puerperal pyrexia.†

\* The figures in this Table relate to the areas as constituted at the date of the weekly returns no corrections having been made for changes in boundary. The live births are derived from the weekly returns furnished by the Registrars and differ from those published for the towns in the Quarterly Return which are corrected for births occurring away from the usual residence of the parents.

† The figures for the Great Towns in the weekly columns relate to 126 Towns. The comparable totals for the years 1937 and 1938 in the last two columns, are in respect of 122 Towns to the end of March and 124 Towns thereafter.

DATE.		ATMOSPHERIC ELECTRICITY. (For explanation of symbols, see Note.)	Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
DECEMBER, 1938.					
Sunday	4		0.9	8.1	Few clouds till 10h., then very cloudy. Over- cast from 16h. Mist till 11 $\frac{1}{2}$ h. Hoar frost in morning.
Monday	5		0.4	8.1	Overcast generally till 13h., cloudless by 16h. Occasional rain 0 $\frac{1}{2}$ h. till 9h.
Tuesday	6		2.6	8.1	Cloudless till 2h., few clouds till 12 $\frac{1}{2}$ h., then nearly overcast. Partially cloudy from 17h. Dew at night.
Wednesday	7	Discontinued.	0.5	8.0	Very cloudy generally till 12h., then overcast. Lunar halo 1 $\frac{1}{2}$ h. till 2 $\frac{1}{2}$ h., and solar halo 11h. till 12 $\frac{1}{2}$ h. Shower 13 $\frac{1}{2}$ h.
Thursday	8		0.0	8.0	Overcast till 14h., nearly so till 19h., then very cloudy. Few clouds from 21 $\frac{1}{2}$ h. Occasional drizzle 3 $\frac{1}{2}$ h. till 10h.
Friday	9		4.3	8.0	Little cloud till 12h., overcast by 12 $\frac{1}{2}$ h. Hoar frost and slight mist in morning. Solar halo 13 $\frac{1}{2}$ h. Rain 17 $\frac{1}{2}$ h. till 21h., then slight rain.
Saturday	10		0.0	8.0	Overcast or nearly so. Rain 2h. till 4h. and 16 $\frac{1}{2}$ h. till 17h. Solar halo 10 $\frac{1}{2}$ h. till 11h.
No. of Column		25	Sum 8.7	Sum 56.3	27

The results apply to the Civil Day, or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 0h., 4 $\frac{1}{2}$ h., noon, 3h., P.M., and 9h., P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "higher," and - "lower" than the average.

The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined.

The numbers in column 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer increased from 29.95 ins. at the beginning of the week to 29.96 ins. by 7h. on Dec. 4th; decreased to 29.46 ins. by 7h. on Dec. 5th; increased to 29.83 ins. by 10h. on Dec. 6th; decreased to 29.20 ins. by 14h. on Dec. 8th; increased to 29.40 ins. by 8h. on Dec. 9th; decreased to 29.07 ins. by 3h. on Dec. 10th; increased generally and was 29.21 ins. by midnight on Dec. 10th.

## CENSUS OF ENGLAND AND WALES, 1931

Census volumes in respect of the counties of England and Wales have now been published.

Parts I of the series, which are complete, relate to the areas as constituted at the date of the Census. Parts II will deal with the changes in boundary effected by County schemes under the Local Government Act of 1929, and will provide a limited range of statistics in respect of the newly constituted areas.

Sectional volumes presenting the results of the census of industries, occupations, etc. are also available, and particulars will be furnished on application.

# The Registrar-General's Decennial Supplement, England and Wales, 1931, Part IIa, Occupational Mortality

An analysis of the occupational mortality of England and Wales in the three years 1930 to 1932.

The present Report covers a wider field than any previous one, in that it deals not merely with the mortality experienced by men in different occupations, but also with the mortality experienced by the wives of these men, and with that experienced by single women engaged in the same and other occupations. Furthermore, it introduces for the first time comparisons of mortalities according to social class and sex, sub-classified according to regions of the country, and also a study of the mortality of children aged 1 to 2 according to the occupation and social class of the parents in addition to the analysis of infant mortality under 1 year repeated from previous Reports.

Statistics are presented for 360 occupational groups of men and 77 of married women analysed at separate ages from more than 50 causes of death; 70 occupations of single women are included with 23 separate causes of death, deaths of infants and young children are analysed from 16 or more causes.

## EXPLANATORY STATEMENT

TABLE I shows, for London and the County Boroughs and those urban districts with resident populations exceeding 50,000 at the last Census, the number of births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday. The births relate to those registered in the area, but include births occurring in municipal maternity hospitals situate outside the area to which they belong.

The deaths are exclusive of non-residents but corrected as far as possible by the inclusion of deaths of residents in other areas. The deaths in Edinburgh and Glasgow are fully corrected for non-residents; those in Dublin and Belfast are corrected by the exclusion of deaths of non-residents occurring in public institutions.

TABLE 2 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for the previous year.

TABLE 3 is a summary of cases of certain specified infectious diseases in England and Wales notifiable under the general law or under orders made by the Local Government Board or Minister of Health and is based upon weekly returns received from the Medical Officers of Health of all Local (and Port) Health Authorities.

The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are *omitted* from this Summary.

TABLE 3A is similar to Table 3, but relates to the returns received too late for inclusion in Table 3 of the previous week. It includes revised figures for England and Wales as a whole for that week.

TABLE 4 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for the previous year.

TABLE 5 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 6 is a Report of the meteorological observations taken at Greenwich on each day of the week.

Summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, are published in the Registrar-General's Quarterly Return and the Statistical Review (Part I).

## NOTES FOR THE WEEK ENDED 17th DECEMBER, 1938

### BIRTHS AND DEATHS.

In the 126 County Boroughs and Great Towns of England and Wales the live births registered in the fiftieth week of the year numbered 6,321 corresponding to an annual rate of 15.5 per 1,000 living: stillbirths numbered 234 corresponding to a rate of 36 per 1,000 total births registered (including stillborn): the deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 4,965 (284 more than in the preceding week).

Infant mortality based on the average weekly number of live births during the last 52 weeks, was 64 against 48, 58, and 49 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,183 live births registered corresponding to an annual rate of 15.1 per 1,000 living: stillbirths numbered 23 corresponding to a rate of 19 per 1,000 total births (including stillborn): the deaths (excluding stillbirths) numbered 921 (69 more than in the preceding week): infant mortality, based on the average weekly number of live births during the last 52 weeks, was 52, against 48, 54 and 52 in the preceding three weeks.

**Table 3.—Notifications of Infectious Diseases.**

**Number of cases notified in the week ended 17th December, 1938, in Administrative Areas and Port Health Districts with Summary for England and Wales.**

*Note.*—Where no return has been received a \* is inserted in the columns. Totals shown against the names of Counties include any associated County Boroughs. The letters in the last column denote the following diseases:—A, Cholera; B, Plague; C, Puerperal fever (London A. C. only); D, Cerebro-spinal fever; E, Acute poliomyelitis; F, Acute polio-encephalitis; G, Acute encephalitis lethargica; H, Typhus fever; I, Relapsing fever; J, Continued fever (London A. C. only); L, Dysentery; M, Ophthalmia neonatorum; N, Puerperal pyrexia†.

† By virtue of the Public Health Act, 1936, in all areas outside London A. C., conditions notifiable as puerperal fever prior to the 1st October, 1937, are, from that date, notifiable as and included with notifications of puerperal pyrexia.

**Summary.**

		Small-pox.	Scarlet fever.	Diphtheria.	Enteric (typhoid and paratyphoid) fever.	Acute pneumonia (primary or influenzal).	Cholera.	Plague.	Puerperal fever (London A. C. only).	Cerebro-spinal fever.	Acute poliomyelitis.	Acute polioencephalitis.	Acute encephalitis lethargica.	Typhus fever.	Relapsing fever.	Continued fever (London A. C. only).	Dysentery.	Ophthalmia neonatorum.	Puerperal pyrexia.†

\* The figures in this Table relate to the areas as constituted at the date of the weekly returns no corrections having been made for changes in boundary. The live births are derived from the weekly returns furnished by the Registrars and differ from those published for the towns in the Quarterly Return which are corrected for births occurring away from the usual residence of the parents.

† The figures for the Great Towns in the weekly columns relate to 126 Towns. The comparable totals for the years 1937 and 1938 in the last two columns, are in respect of 122 Towns to the end of March and 124 Towns thereafter.

**Table 5.—Meteorology in certain Towns during the Week ended Saturday, 17th December, 1938.**

DATE.		ATMOSPHERIC ELECTRICITY. (For explanation of symbols, see Note.)	Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
DECEMBER, 1938.					
Sunday	.. 11		0.1	7.9	Overcast or nearly so. Rain 4h. till 4½h. Lunar halo ob. till 0½h.
Monday	.. 12		3.7	7.9	Overcast or nearly so till 11h. Cloudy till 13½h., then little cloud. Overcast and misty by 24h. Rain 3½h. till 4h., and 5½h. till 7h.
Tuesday	.. 13		0.3	7.9	Overcast or nearly so. Misty till 8h.
Wednesday	.. 14	Discontinued.	0.0	7.9	Overcast or nearly so. Rain or drizzle 4h. till 11h. Mist 14h. till 17h., then fog, thick from 22h.
Thursday	.. 15		2.0	7.9	Thick wet fog till 10h., few clouds by 11h. Nearly overcast from 13½h. Shower 10½h.
Friday	.. 16		0.0	7.8	Overcast throughout. Occasional rain 5h. till 8h., rain till 18h, then drizzle.
Saturday	.. 17		0.0	7.8	Overcast till 16½h., clearing to cloudless by 18h. Drizzle till 3h. Hoar frost at night.
No. of Column		25	Sum 6.1	Sum 55.1	
			26	27	

The results apply to the Civil Day, or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "higher" and - "lower" than the average.

The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine on each day.

The reading of the barometer increased generally from 29.71 ins. at the beginning of the week to 29.91 ins. by 0h. on Dec. 13th; decreased to 29.69 ins. by 4h. on Dec. 16th; increased to 30.13 ins. by 18h. on Dec. 17th; decreased and was 30.11 ins. by midnight on the same day.

## CENSUS OF ENGLAND AND WALES, 1931

Census volumes in respect of the counties of England and Wales have now been published.

Parts I of the series, which are complete, relate to the areas as constituted at the date of the Census. Parts II will deal with the changes in boundary effected by County schemes under the Local Government Act of 1929, and will provide a limited range of statistics in respect of the newly constituted areas.

Sectional volumes presenting the results of the census of industries, occupations, etc. are also available, and particulars will be furnished on application.

# The Registrar-General's Decennial Supplement, England and Wales, 1931, Part IIa, Occupational Mortality

An analysis of the occupational mortality of England and Wales in the three years 1930 to 1932.

The present Report covers a wider field than any previous one, in that it deals not merely with the mortality experienced by men in different occupations, but also with the mortality experienced by the wives of these men, and with that experienced by single women engaged in the same and other occupations. Furthermore, it introduces for the first time comparisons of mortalities according to social class and sex, sub-classified according to regions of the country, and also a study of the mortality of children aged 1 to 2 according to the occupation and social class of the parents in addition to the analysis of infant mortality under 1 year repeated from previous Reports.

Statistics are presented for 360 occupational groups of men and 77 of married women analysed at separate ages from more than 50 causes of death; 70 occupations of single women are included with 23 separate causes of death, deaths of infants and young children are analysed from 16 or more causes.

## EXPLANATORY STATEMENT

TABLE I shows, for London and the County Boroughs and those urban districts with resident populations exceeding 50,000 at the last Census, the number of births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday. The births relate to those registered in the area, but include births occurring in municipal maternity hospitals situate outside the area to which they belong.

The deaths are exclusive of non-residents but corrected as far as possible by the inclusion of deaths of residents in other areas. The deaths in Edinburgh and Glasgow are fully corrected for non-residents; those in Dublin and Belfast are corrected by the exclusion of deaths of non-residents occurring in public institutions.

TABLE 2 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for the previous year.

TABLE 3 is a summary of cases of certain specified infectious diseases in England and Wales notifiable under the general law or under orders made by the Local Government Board or Minister of Health and is based upon weekly returns received from the Medical Officers of Health of all Local (and Port) Health Authorities.

The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are *omitted* from this Summary.

TABLE 3A is similar to Table 3, but relates to the returns received too late for inclusion in Table 3 of the previous week. It includes revised figures for England and Wales as a whole for that week.

TABLE 4 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for the previous year.

TABLE 5 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 6 is a Report of the meteorological observations taken at Greenwich on each day of the week.

Summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, are published in the Registrar-General's Quarterly Return and the Statistical Review (Part I).

## NOTES FOR THE WEEK ENDED 24th DECEMBER, 1938

### BIRTHS AND DEATHS.

In the 126 **County Boroughs and Great Towns** of England and Wales the live births registered in the fifty-first week of the year numbered 4,828 corresponding to an annual rate of 11.9 per 1,000 living: stillbirths numbered 289 corresponding to a rate of 56 per 1,000 total births registered (including stillborn): the deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 5,357 (392 more than in the preceding week).

Infant mortality based on the average weekly number of live births during the last 52 weeks, was 61 against 58, 49 and 64 in the preceding three weeks.

In **London** (Administrative County including the City of London) there were 799 live births registered corresponding to an annual rate of 10.2 per 1,000 living: stillbirths numbered 39 corresponding to a rate of 47 per 1,000 total births (including stillborn): the deaths (excluding stillbirths) numbered 1,000 (79 more than in the preceding week): infant mortality, based on the average weekly number of live births during the last 52 weeks, was 57, against 54, 52 and 52 in the preceding three weeks.

Table 3.—Notifications of Infectious Diseases.

Number of cases notified in the week ended 24th December, 1938, in Administrative Areas and Port Health Districts with Summary for England and Wales.

*Note.*—Where no return has been received a \* is inserted in the columns. Totals shown against the names of Counties include any associated County Boroughs. The letters in the last column denote the following diseases :—A, Cholera ; B, Plague ; C, Puerperal fever (London A. C. only) ; D, Cerebro-spinal fever ; E, Acute poliomyelitis ; F, Acute polio-encephalitis ; G, Acute encephalitis lethargica ; H, Typhus fever ; I, Relapsing fever ; J, Continued fever (London A. C. only) ; L, Dysentery ; M, Ophthalmia neonatorum ; N, Puerperal pyrexia†.

† By virtue of the Public Health Act, 1936, in all areas outside London A. C., conditions notifiable as puerperal fever prior to the 1st October, 1937, are, from that date, notifiable as and included with notifications of puerperal pyrexia.

## Summary.

	Small-pox.	Scarlet fever.	Diphtheria.	Enteric (typhoid and paratyphoid) fever.	Acute pneumonia (primary or influenzal).	Cholera.	Plague.	Puerperal fever (London A. C. only).	Cerebro-spinal fever.	Acute poliomyelitis.	Acute polioencephalitis.	Acute encephalitis lethargica.	Typhus fever.	Relapsing fever.	Continued fever (London A. C. only).	Dysentery.	Ophthalmia neonatorum.	Puerperal pyrexia.†

\* The figures in this Table relate to the areas as constituted at the date of the weekly returns no corrections having been made for changes in boundary. The live births are derived from the weekly returns furnished by the Registrars and differ from those published for the towns in the Quarterly Return which are corrected for births occurring away from the usual residence of the parents.

† The figures for the Great Towns in the weekly columns relate to 126 Towns. The comparable totals for the years 1937 and 1938 in the last two columns, are in respect of 122 Towns to the end of March and 124 Towns thereafter.

DATE.		ATMOSPHERIC ELECTRICITY. (For explanation of symbols, see Note.)	Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
DECEMBER, 1938.					
Sunday	18		2.1	7-8	Cloudless till 6h., few clouds till 9h., then cloudy. Nearly overcast or overcast from 13h. Hoar frost in morning. Fresh wind from 11h.
Monday	19		0.0	7-8	Overcast. Slight snow 8h. till 10h., snow till 14h., then occasional slight snow. Fresh wind throughout.
Tuesday	20		2.5	7-8	Overcast till 10 <sup>15</sup> h., few clouds by 11h. Nearly overcast 13 <sup>15</sup> h. till 16h., cloudless by 18h. Nearly overcast from 22h. Slight snow 6h. till 9h.
Wednesday	21		0.0	7-8	Nearly overcast till 3h., then overcast. Snow or slight snow from 8h.
Thursday	22		0.0	7-8	Overcast or nearly so. Slight snow till 8h. Fog 7h. till 13h. with gloom from 11h. Sleet 18h. till 20h., then slight snow.
Friday	23		0.0	7-8	Overcast throughout. Slight snow till 6h. then snow till 12 <sup>15</sup> h.
Saturday	24		0.0	7-8	Overcast throughout. Snow or slight snow 11 <sup>15</sup> h. till 18h.
No. of Column		25	Sum 4.6	Sum 54.6	27

The results apply to the Civil Day, or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "higher," and - "lower," than the average.

The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined.

The numbers in column 26 derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of *bright* sunshine on each day.

The reading of the barometer decreased from 30.11 ins. at the beginning of the week to 29.47 ins. by 14h. on Dec. 21st; increased and was 30.16 ins. by midnight on Dec. 24th.

Discontinued.

## CENSUS OF ENGLAND AND WALES, 1931

Census volumes in respect of the counties of England and Wales have now been published.

Parts I of the series, which are complete, relate to the areas as constituted at the date of the Census. Parts II will deal with the changes in boundary effected by County schemes under the Local Government Act of 1929, and will provide a limited range of statistics in respect of the newly constituted areas.

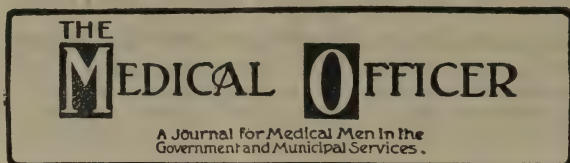

Sectional volumes presenting the results of the census of industries, occupations, etc. are also available, and particulars will be furnished on application.

## The Registrar-General's Decennial Supplement, England and Wales, 1931, Part IIa, Occupational Mortality

An analysis of the occupational mortality of England and Wales in the three years 1930 to 1932.

The present Report covers a wider field than any previous one, in that it deals not merely with the mortality experienced by men in different occupations, but also with the mortality experienced by the wives of these men, and with that experienced by single women engaged in the same and other occupations. Furthermore, it introduces for the first time comparisons of mortalities according to social class and sex, sub-classified according to regions of the country, and also a study of the mortality of children aged 1 to 2 according to the occupation and social class of the parents in addition to the analysis of infant mortality under 1 year repeated from previous Reports.

Statistics are presented for 360 occupational groups of men and 77 of married women analysed at separate ages from more than 50 causes of death; 70 occupations of single women are included with 23 separate causes of death, deaths of infants and young children are analysed from 16 or more causes.

## EXPLANATORY STATEMENT

TABLE I shows, for London and the County Boroughs and those urban districts with resident populations exceeding 50,000 at the last Census, the number of births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday. The births relate to those registered in the area, but include births occurring in municipal maternity hospitals situate outside the area to which they belong.

The deaths are exclusive of non-residents but corrected as far as possible by the inclusion of deaths of residents in other areas. The deaths in Edinburgh and Glasgow are fully corrected for non-residents; those in Dublin and Belfast are corrected by the exclusion of deaths of non-residents occurring in public institutions.

TABLE 2 shows the deaths in London at ages and by causes of death and by cause in the current year to date with corresponding figures for the previous year.

TABLE 3 is a summary of cases of certain specified infectious diseases in England and Wales notifiable under the general law or under orders made by the Local Government Board or Minister of Health and is based upon weekly returns received from the Medical Officers of Health of all Local (and Port) Health Authorities.

The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are *omitted* from this Summary.

TABLE 3A is similar to Table 3, but relates to the returns received too late for inclusion in Table 3 of the previous week. It includes revised figures for England and Wales as a whole for that week.

TABLE 4 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks and in the current year to date with corresponding figures for the previous year.

TABLE 5 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 6 is a Report of the meteorological observations taken at Greenwich on each day of the week.

Summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, are published in the Registrar-General's Quarterly Return and the Statistical Review (Part I).

## NOTES FOR THE WEEK ENDED 31st DECEMBER, 1938

### BIRTHS AND DEATHS.

In the 126 County Boroughs and Great Towns of England and Wales the live births registered in the fifty-second week of the year numbered 5,099 corresponding to an annual rate of 12.5 per 1,000 living: stillbirths numbered 219 corresponding to a rate of 41 per 1,000 total births registered (including stillborn): the deaths (excluding stillbirths) corrected as far as possible for non-residents numbered 6,130 (773 more than in the preceding week).

Infant mortality based on the average weekly number of live births during the last 52 weeks, was 71 against 49, 64 and 61 in the preceding three weeks.

In London (Administrative County including the City of London) there were 932 live births registered corresponding to an annual rate of 11.9 per 1,000 living: stillbirths numbered 24 corresponding to a rate of 25 per 1,000 total births (including stillborn): the deaths (excluding stillbirths) numbered 1,137 (137 more than in the preceding week): infant mortality, based on the average weekly number of live births during the last 52 weeks, was 76, against 52, 52 and 57 in the preceding three weeks.

Table 3.—Notifications of Infectious Diseases.

Number of cases notified in the week ended 31st December, 1938, in Administrative Areas and Port Health Districts with Summary for England and Wales

*Note.*—Where no return has been received a \* is inserted in the columns. Totals shown against the names of Counties include any associated County Boroughs. The letters in the last column denote the following diseases:—A, Cholera; B, Plague; C, Puerperal fever (London A. C. only); D, Cerebro-spinal fever; E, Acute poliomyelitis; F, Acute poli-encephalitis; G, Acute encephalitis lethargica; H, Typhus fever; I, Relapsing fever; J, Continued fever (London A. C. only); L, Dysentery; M, Ophthalmia neonatorum; N, Puerperal pyrexia†.

† By virtue of the Public Health Act, 1936, in all areas outside London A. C., conditions notifiable as puerperal fever prior to the 1st October, 1937, are, from that date, notifiable as and included with notifications of puerperal pyrexia.

Summary.

		Small-pox.	Scarlet fever.	Diphtheria.	Enteric (typhoid and paratyphoid) fever.	Acute pneumonia (primary or influenzal).	Cholera.	Plague.	Puerperal fever (London A. C. only).	Cerebro-spinal fever.	Acute poliomyelitis.	Acute poli-encephalitis.	Acute encephalitis lethargica.	Typhus fever.	Relapsing fever.	Continued fever (London A. C. only).	Dysentery.	Ophthalmia neonatorum.	Puerperal pyrexia.†

\* The figures in this Table relate to the areas as constituted at the date of the weekly returns no corrections having been made for changes in boundary. The live births are derived from the weekly returns furnished by the Registrars and differ from those published for the towns in the Quarterly Return which are corrected for births occurring away from the usual residence of the parents.

† The figures for the Great Towns in the weekly columns relate to 126 Towns. The comparable totals for the years 1937 and 1938 in the last two columns, are in respect of 122 Towns to the end of March and 124 Towns thereafter.

DATE.	ATMOSPHERIC ELECTRICITY. (For explanation of symbols, see Note.)	Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.	
DECEMBER, 1938.					
Sunday ... 25		0.0	7.8	Overcast throughout. Slight snow 11 $\frac{1}{2}$ h. till 12h. Slight mist from 7h.	Discontinued.
Monday ... 26		0.0	7.8	Overcast throughout. Snow 7h. till 11 $\frac{1}{2}$ h., slight snow till 13 $\frac{1}{2}$ h. Drizzle from 17h. till 23h. Fog from 0h., mist from 6h.	
Tuesday ... 27		3.4	7.8	Overcast till 4h., nearly cloudless by 6h. Thin cloud 13h. till 18h., then overcast. Cloudy from 22h., mist from 19h.	
Wednesday ... 28		0.5	7.9	Cloudy till 5h., little cloud till 10h., then overcast. Mist till 16h., then fog. Damping from 21h.	
Thursday ... 29		0.0	7.9	Overcast, clearing 22 $\frac{1}{2}$ h., nearly cloudless by 23 $\frac{1}{2}$ h. Mist or fog till 13h. Slight drizzle 8h. till 10h. Rain 13 $\frac{1}{2}$ h. till 22h.	
Friday ... 30		3.6	7.9	Few clouds till 13h., nearly overcast by 13 $\frac{1}{2}$ h. Little cloud from 19h.	
Saturday ... 31		3.0	7.9	Little cloud till 12 $\frac{1}{2}$ h., then cloudy. Overcast from 19 $\frac{1}{2}$ h. Hoar frost in morning. Mist from 6h. Slight rain 19 $\frac{1}{2}$ h. till 23h.	
No. of Column	25	Sum 10.5	Sum 55.0		
		26	27		

The results apply to the Civil Day, or from midnight to midnight, Greenwich Mean Time. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer, is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 7). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Hygrometrical Tables, published by the Meteorological Office, Air Ministry.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 85 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 8 and 23 it will be borne in mind that + indicates "higher" and - "lower" than the average.

The values given in column 16 are not corrected for the index error of the thermometer, which cannot be determined.

The numbers in column 26, derived from the Campbell Stokes Sunshine Instrument show the aggregate duration of bright sunshine on each day.

The reading of the barometer increased from 30.16 ins. at the beginning of the week to 30.33 ins. by 20h. on Dec. 25th.; decreased to 29.81 by 0h., on Dec. 28.; increased to 29.92 by 10h. on Dec. 28.; decreased to 29.40 by 13h. on Dec. 30.; increased to 29.55 by 17h. on Dec. 31.; decreased and was 29.47 ins. by midnight on the same day.

## CENSUS OF ENGLAND AND WALES, 1931

Census volumes in respect of the counties of England and Wales have now been published.

Parts I of the series, which are complete, relate to the areas as constituted at the date of the Census. Parts II will deal with the changes in boundary effected by County schemes under the Local Government Act of 1929, and will provide a limited range of statistics in respect of the newly constituted areas.

Sectional volumes presenting the results of the census of industries, occupations, etc. are also available, and particulars will be furnished on application.

# The Registrar-General's Decennial Supplement, England and Wales, 1931, Part IIa, Occupational Mortality

An analysis of the occupational mortality of England and Wales in the three years 1930 to 1932.

The present Report covers a wider field than any previous one, in that it deals not merely with the mortality experienced by men in different occupations, but also with the mortality experienced by the wives of these men, and with that experienced by single women engaged in the same and other occupations. Furthermore, it introduces for the first time comparisons of mortalities according to social class and sex, sub-classified according to regions of the country, and also a study of the mortality of children aged 1 to 2 according to the occupation and social class of the parents in addition to the analysis of infant mortality under 1 year repeated from previous Reports.

Statistics are presented for 360 occupational groups of men and 77 of married women analysed at separate ages from more than 50 causes of death; 70 occupations of single women are included with 23 separate causes of death, deaths of infants and young children are analysed from 16 or more causes.
